## PROCEEDINGS

## OF

## THE SOCIETY

OF

## BIBLICAL ARCHÆOLOGY.

TWENTY-EIGHTH SESSION, 1898.

First Meeting, ilth Jamary; i SgS. [anniversary.]

Walter morrison, M.P., President, IN THE CHAIR.

The President referred to the loss the Society had recently suffered by the death of one of its oldest Members, Mr. Charles Harrison, M.P., F.S.A., etc., who died on Friday the 24th of December, 1897. He was a Member of the Council for many ycars, took the greatest interest in the Society, and gave cvery assistance in his power to secure its welfare.

The following Presents were announced, and thanks ordered to be returned to the Donors :-

Prom the Secretary of State for India in Council:-Archæological Survey of India. New Imperial Series. Vol. XXII. The bower MTanuscript. Parts III and VII. Edited by $\therefore$ E. Rudolf Hoemle, Ph.D. Folio. Calcutta. 1897.
I ron the Rev. F. Vigoronx:-Histoire du Patriarche Copte Isaac (étude criticque. texte et traduction). Par E. Amélineau. l'aris. Sro. iSgo.
From the Pullishers, Messrs. Eyre and Spottiswoode :-Abraham and his Age. By Henry George Tomkins (Bible Students' Library. Vol. VI). London. Svo. 1897.
from the Author, Éd. Naville:-Les dernières lignes de la Stèle mentionnant les Israélites. Folio. Paris. 1897. (Rec. de Trorasn: Vol. XX.)
From the Author, Rev. C. de Cara, S.J. :-Gli Hethei-Pelasgi in Italia. (dl' Italici nella Paletnologia Italiana. Svo. (Cĩ̃ilta Cert. Seric XII, Vol. XII. Dicembre, 1897. )

The following Candidates were nominated for election at the next Mceting to be held on the ist February; a 898 :-

Nis's Sjoleerg, Amanuensis at the Vietoria Museum, Upsala.
Mrs. Iane, Dangstein, l'etersfield.
Rev. Joseph Heyes, Beuel bei Bonn, Germany.
Walte: Tomlinson, M.A., Ashley Cardens, Victoria Street, Westminster.

Tie following Candidates were elected Members of the Society, having been nominated at the last Mecting, held on the 7th December, I897:-

Admiral Selwyn, iSG, Cluucester Terrace, H jde Park, W.
John Tuckweil, 32, Sarre Road, West Hampstead, N.IV.
The Sicutary read a letter from Professor Sayce announci,g that:-
'i'.e royal toml, discovered hy M. de Morgan last spring a' Nesgad., turns out to be that of King Menes himself.

Dr. Borchardt has just found his name on an engraved plaque of ivory disinterred from the tomb. On other objects only the $k a$-name Alha is met with. Among the objects found in the tomb are small vases of obsidian, turned on a lathe; the obsidian appears to have come from the Ægean, as the nearest source of it to Egypt is the island of Santorin, the ancient Thera. An ivory dog, also found in the tomb, is one of the finest specimens of Egyptian art that have come down to us. The body (or mummy) of the king was buried in the Babylonian fashion, but fragments of it are now in the Gizeh Museum. Three of the kings whose remains have been discovered at Abydos by M. Amélineau have been identified by Dr. Sethe with Usaphaes, Mielidos, and Semempses of the first dynasty.

The Rer: C. J. Ball read a Paper entitled, "Puzzles in Picture-Writing."

Remarks were added by the Rev. Dr. Löwy, Mr. Read, the Rev. C. J. Ball, and the Chairman.

The remarks made by Dr. Löwy will be included in a Paper to be read by him during the present session, probably at the April Mceting.

Thanks were returned for this communication.
The Sccrctary's Report was received, accepted, and ordered to be entered on the Minutes.

## SECRETARY'S REPORT

FOR THE YEAR 1897.

In commencing the annual Report I must again refer to the severe losses the Society has suffered by the death of some of its most distinguished members, whose places it will be difficult to fill. It has been my sad duty to-day to announce still another, that of one who has been a kind friend to the Society since its commencement.

The number on the Roll of Members has, however, been fairly retained, and it is a pleasure to thank those friends who have so kindly obtained the names of new members; there is still, however, much more that might be done, if a determined effort was made in this direction. There must be many who would be willing, if only they were asked, to help us to place a greater quantity of material, of a more varied character, in the hands of scholars and students. I have many times appealed to the whole body of members to assist the Society in this manner; I again repeat the appeal, in the hope that it may not be overlooked.

The Twenty-seventh Session commenced in November, i896, but the present volume, like its immediate predecessors, includes the Proccedings from January to December.

The papers read before the Society, and printed in this volume, will be found not inferior in valae and interest to those of former years, and the best thanks of the Society are due to the many writers who have thus contributed to the success of our meetings and publications. I am happy to be able to report that other papers dealing with Biblical and other subjects have been promised. The scheme of widening the operations of the Society, by obtaining a larger number of papers on Biblical topics, now under consideration by the Council, will enable them to arrange for papers more varied in subject, and it is hoped that the new effort will be reccived with satisfaction by the mumerous friends of the Society. The various papers, many of them fully illustrated, printed in the present volume, are as follows, classed under their various divisions:-
Sik I'. if: P.dge Renour:
The liook of the Dead, Chapters C.XXIX and CXXX (February); (hapters CXXX to CXXXII (March); Chapters CXXXIII to ( XXXV (April) ; Chapters CNXXVI A and B (May) ; Chapters CXXXIlla to CXXXIX (June); The Lay of the Threshers (March); Young and Champollion (May).

Miss M. Murray :
The Stela of Duai-er-neheh of the NVIIIth Dynasty, illustrated with a plate, showing the manner in which the characters were drawn by the Egyptian scribe (February).
Prof. Dr. Eisenlohr:
The Rollin Papyri and their Baking Calculations (Part I, February ; Part II, March ; Part III, April ; Part IV, conclusion, June).
Walter L. Nash, F.S.A., and Sir P. le Page Renouf :
An Hypocephalus from Luxor, in the collection of Mr. Nash (April).
F. Ll. Griffith :

Scarabs belonging to Mr. John Ward, The Khyan Group of Kings, The Israel Stela, Additional Notes to Egyptian Literature (November).
F. Legge:

A Coptic Spell of the Second Century (May), and a further note on the same Spell (November).
W. E. Crum :

A Coptic Palimpsest ; I. Prayer of the Virgin in "Bartos";
2. Fragment of a Patriarchal History (May).

Professor A. H. Sayce :
Assyriological Notes, No. II (February); Part III (November) ;
Hrematite Cylinder from Cappadocia (November).
Professor Dr. Hommel:
Assyriological Notes (February).
Rev. H. G. Tomkins :
Khiana or Khâna (March).
Theo. G. Pinches:
Two Archaic and thre later Babylonian Tablets (April).
The Hon. Miss Plunket:
The Median Calendar and the Constellation Taurus, with a note by Mr. J. Offord, and an additional note by Miss Plunket (June).
Alfred Boissier :
Note sur un linteau de porte découvert en Assyrie par George Smith (June).
Professor Dr. Jules Oppert :
The Cuneiform Inscriptions and the Book of Kings, read at the November Meeting, and to be printed in a future part.
Joseph Offord:
Pre-Mosaic Palestine (January).
Dr. M. Gaster :
Two Unknown Hebrew Versions of the Tobit Legend (January).
The Hebrew Text appeared in March.
Rev. G. Margoliouth :
More Fragments of the Palestinian Syriac Version of the Holy Scriptures (January), the former parts of which were printed.

## E. J. Pilcher:

The date of the Siloam Inscription (May).
Mr. J. Offord:
Note on Miss I'lunket's paper on the Median Calendar (June), as well as a short account of the Congress of Orientalists held in Paris during September (December).

The Book of the Dead was unhappily left incomplete on the death of our lamented President, Sir Peter Renouf. I am, however, happy to be able to report that it will not remain unfinished, as arrangements are now being made for its completion, Lady Renouf having very kindly placed all the notes left by Sir Peter at our disposal for that purpose. Although a little delay must, under the circumstances, necessarily arise, I hope that before long the Society will be able to commence the publication of the concluding chapters.

The number of kindred Societies with which publications are exchanged has been increased. Many donations of books have also been made by various authors, to whom the best thanks of the Society are due for thus placing their works within the reach of many to whom they may be of real service, and others have been purchased by the Council, but it is to be regretted that the funds at their disposal for this purpose are not sufficient to make this department of the Library as complete as could be wished.

A list of many works especially wanted for the use of the Members has been printed many times at the end of the Procccdings. This list is necessarily altered from time to time, owing to the kind responses made, by the presentation of some of the books required. It is sincerely to be hoped, for the benefit of those students who use our L brary, that those Members who have duplicate copies of those works entered in the list, or others connected with the objects of the Society, will present them, and thus give to students the opportunity and benefit of using them.

We have to thank Mr, Walter Morrison, M.P., President, who has so often generously given assistance, for a substantial addition to our funds, as also to other Members who have generously contributed. To Mr. E. J. Pilcher the Society has been indebted for the cost of the plates illustrating his paper.

| Joseph Offord, Esq. ... | $\ldots$ | $\ldots$ | $\ldots$ | 1 | r |  |

The cost of printing the publications is necessarily very greas, and it surely ought to be unnecessary for me to point out year after year, that, in order that the work may be properly carried out, liberal contrbutions are to be desired from the Members.

Much inconvenience, and correspondence which should be unnccessary, has been caused by some members not paying their subscripuons regularly. I must call attention to the notices issued in the Proceedings at the end of each year, one of which points out that the subscriptions are due in advance in January. I need hardly point out that if subscriptions are not paid regularly, difficulty and trouble occurs as to the amount of money at the disposal of the Council.

The audited Statement of Receipts and Expenditure for the year 1897 shows that the funds available for that year have been $\underset{\sim}{\mathcal{S}} 20$ I6r. 5 d ., and the expenditure for the same period has been $£ 71725.11 a \%$. The balance carried forward from 1896 was $£ 65$ 19s. 2d., and that from the year just ended $£ 103$ I $3 s .6 a \%$.

The Statement of Receipts and Expenditure was read by Mr. Christy, received, accepted and ordered to be entered on the Minutes. A vote of thanks, proposed by Mr. Offord, seconded by the Rev. C. J. Ball, and carried, was given to the Secretary for his efforts on behalf of the Society. Remarks being added by Dr. Oladstone, F.R.S., and the Rev. Dr. Löwy.

A vote of thanks to Mr. Morrison, M.P., for having temporarily undertaken the office of President, and for having so kindly given every assistance to the Society, was proposed by Dr. Löwy, seconded by the Rev. C. J. Ball, and carried unanimously.

Mr. Thos. Christy, F.L.S., proposed, and the Rev. J. Marshall seconded, a vote of thanks to the Rev. R. Gwynne for his labours on behalf of the Society, which was carried unanimousiy.

The following Officers and Council for the current year were elected:-

## COUNCIL, 1898.

## President.

JROF. A. II. SAYCE, LL.D., etc., etc.

## Vice-Presidents.

The Most Rev. lif Grace Tiae Lord Arcibishof of York. The Most Noble the Marquess of bute, K.T., \&e., \&e.

## BABYLONIAN HIEROGLYPHS.

By the Rev.' C. J. Ball, M.A.,<br>Examiner for the Oxford University Hebrew Scholarships, 1897.

There are people who still find a difficulty in admitting the pictorial origin of the cuneiform characters. For my own part, I am not only quite convinced of the truth of this opinion, in spite of the fact that many characters still await their pictorial explanation ; I also believe, as I stated in these Proceedings for June, I890, that the Egyptian and Chinese hieroglyphic systems are both offshoots of the primitive system of Chaldea, now only represented by the so-called linear writing, from which the cuneiform script was gradually derived. As it is some time since I published anything directly bearing upon a question so important to investigators of the origin of writing, I trust that what I have now to add to former communications may excite some degree of interest in a Society which can boast of the pioneering efforts of that distinguished man the late Reverend William Houghton.
(I) I start with the written symbol denoting Nineveh and its tutelar goddess. In cuneiform this is $x^{2}$ 或, which is a compound of $x=y$ house and YY fish. In the linear character (Gudea B, Col. VIII, 1. 5I at al) (his ideogram or hieroglyph, as we may call it, appears thus $\square$; which is clearly the outline of a two-storied building, floor. With the determinative $=$, the character was read
 with a fish on the lower prefix -2 Fy city, thus $-=$ Fy Ni-nu-a and Ni-na-a, ie., Nineveh. With the determinative of deity, my god or goddess, it denoted the tutelar divinity of the place, who was probably also called Nina i (cf. As̆sulur, 'A $\sigma \sigma \hat{u} p o c$, as the tutelar god of the city

Ašurur, and perhaps Ilvrdug as a form of Urudug, Eridug, "The good seat" or settlement). In Sargon's Cylinder Inscription, 1. 54, a goddess s̆a-Uš-ka ras̆ibut Nîmà kI, "Shaushka that overaweth Nineveh," is mentioned. And Dushratta of Mitanni seems to call Ishtar of Nineveh by this mame: see Winckler's transcript of the Berlin Tell el-Amarna texts, Plate 33, line 98, where I think we should read uru Nînu-â-pi dingir s.l-u[š-Ki]-s̆i, "Shaushkash (i.e., Ishtar) of Nineveh": cf. Pl. 30 , line $S_{4}$, dingir s.l-us̆-kas̆; and for the identity of Ishtar and Shaushka, of. the letter of Dushratta to Nimmuriya, No. 10 in the Brit. Mus. Collection, l. 13 : Ištar sala ali Nïnt̂. Possilly, therefore, the ideogram was also read Shaushka, as the name of the goddess. However that may be, it is surely a fact of capital importance for a right estimate of the character of the Biblical book of Jonah that the name of the city to which the prophet was sent was expressed in writing, from the earliest period, by a combination of the symbols for house and fish. For this fact at once suggests that the three days' sojourn of Jonah in the House of the Fish, i.e., in Nineveh, might be symbolized or Haggadically represented as a three days' abode in the bowels of a "Great Fish "; much as Israel's enforced sojourn in Babylon could be compared with being swallowed up by a dragon (Jer. li, $3+$ ). And, considering that the name יובה dow is peculiar for a prophet, and unique as a personal designation ( 2 Kings xiv, 25 ; Jonah i-iv only), and that the dove was sacred to the goddess Ishtar-Astarte, we may see another trace of mythical connection even in the prophet's name.

Now what is the precise meaning of the hieroglyph? Primitively, the goddess herself may have been conceived of as a great fish. Fish were sacred to her Syrian counterpart Atergatis (i.e. 1shtar-Atys), and were kept in the temple-ponds at Edessa, Hierapolis, and Ascalon (See Robertsox-Smith, Rel. Sem.). The beantiful classical myth of Aphrodite rising out of the sea will ${ }_{d}$ occur to everyone. But the fish might also denote multitudinous offspring, prolific numbers, especially in connection with the symbol for house (family, and also settloment, territory; cf. the use of
 Beth-(iarmai, etc.) ; in fact, $\begin{aligned} \text { Y } \\ \text { is explained by the Assyrian }\end{aligned}$ kubuthi, "muchness," "multitude," as well as by minnu, "fish." And house + fish, i.e., House of Multitudes, would be a good name for Ninevch, "The (ireat City" (Gen. x, 12), which was especially great in population (Jonah iii, 3 ; iv, 11) ; while the same hieroglyph
would aptly suggest the goddess Ninâ，as the source of its teeming numbers，and a birth－goddess，like Gula－Mylitta．The name Nina may thus be really akin to the obscure Hebrew nin，＂offspring＂ בין וגבד（Gen．xxi，23），and to the verb יבון in Ps．Ixxii， 17 （Qeri）． To the same root may be traced numu，בובא，＂fish，＂strictly＂the teeming＂or＂multiplying．＂And，further，according to familiar interchanges of sound，בוב may be akin to $\boldsymbol{\beta}$ ；for $N-B=N-n=N-N$ ：and yet another form of the same root may be recognized in the Sumerian lum，＂to
 Assyr．suluppu（as if from su．lub）＂date．＂Other connections seem to be nun，＂great，＂nim，＂high，＂e－nim（＂height＂）： ＂heaven，＂e－lam，＂highland，＂＂Elam＂；the ground－notion in all being that of shooting forth and upzoard，growing up，and so becoming and being tall or high．And bearing in mind the established interchange of N and $\breve{s}$ in Sumerian，we may． may see reason for connecting the Semitic $\mathbb{W}$ 人 samĥ， ＂heaven，＂with a neo－Sumerian šam＝vam＝nim；so that in Hebrew as in other languages heaven is the height above（cf．מרום． In Tibetan nam is＂heaven．＂）＊
 so conventionalized in the oldest in－ 4000），that its pictorial significance is
 ，has already become scriptions（circa b．c． not easy to recognize． The original linear figure may have suggested a man holding up his arms；of．the Egyptian ${ }_{f}^{f} q a$ ，＂height．＂At all events，the existing linear character closely resembles the linear forms of $\mathbf{x T r}{ }^{(1)}$＂male，＂ －yץ＂man，＂＂servant ；＂see Amiaud－Méchineau，Tableau Comparí， Nos． 7 and 8．Possibly，however，the figure represents a throne with－

[^1]out a back, such as the two gods (Sun and Moon) occupy in the seal
 here shown ; just as the character - Mr "lord," "high," "heaven," was "lord," "high," "heaven," was once the picture of a high-backed throne, such as gods and kings sometimes occupy in the seal-engravings and wall-sculptures: cf. the linear form

smwith the throne of the Moon-god in the annexed seal, and with that of Sennacherib in the well-known scene of the king sitting in state and receiving the spoils of Lachish.
 explained alâdu, which means both
 "to beget" and "to bear," and banû ša alâdi, " to produce, in the sense of begetting (or bearing)," has long been a puzzle to me. The cunciform preserves the original clements, viz.: - $\lll<$ bird and knee, as is clear from the linear
 , and from the name of the character invented by the Semitic Babylonian literuti, viz: Mušendugû, i.e., " Birdknee," or "Bird-on-knee"; a designation quite parallel to those given by Chinese scholars to some of their own ideograms. The solution of the puzzle lies in the fact that $-k<y$ hu, or GU, originally represented the young or unfledged bird, the

$z$ of the Egyptian script. The young bird symbolizes a child, and the child on the knee is a modest symbol of generation and parturition, or of parentage generally. This association of the knees with birth illustrates several passages of the Old Testament. "Why," asks Job, "did the knees receive me?" (iii, 12) ; cf. also (ien. xxx, $3 ; 1,23$. And it will be remembered that the Roman father signified his adoption of his newborn offspring, by receiving it on his knees. That in course of time $-\gamma<\gamma$ should have come to be used to signify lird (issuru) in general, is not surprising, considering the vagueness of the linear characters.
(4) Having found the clue to the ideogram $-Y<Y \&$, I was also enalled to explain the curious $\rightarrow Y\rangle\langle$ sis , which is defined in

Assyrian by mabit, "to name." This hieroglyph is composed of $-\mathrm{K}^{\boldsymbol{Y}}$, young bird, nestling, and Nos. 25 and 261). We know from Genesis (xxix, 32-35; xxx, $6-13,18-24$; xxxv, I8) that the mother, or the midwife (xxxviii, $27-30$ ), commonly named a child at its birth. The picture of a nestling in bed, therefore, was used by the old Babylonian inventors of writing to suggest the notion of naming, by a very natural association of ideas.
(5) The more important of the linear forms of $-Y \mathrm{Y} Y \mathrm{Yl}$, RI, etc., is also a bird-character. We see at once that is simply the linear form of $-K<\gamma$, modified by the addition of a second cross line at the top, which also appears in

 (Amiaud-Méchineau, No. z8). What does this modification stand for? It must be remembered that the difficulty of ascertaining the precise objects represented by the linear characters, is mainly due to the conventional form which they have already assumed in the course of centuries of use; for at the date of the Semitic king Sargon I. of Accad, b.c. 3800 , the writing was already ancient. Bearing this in mind, the suggestion may be hazarded that the double cross-lines represent the open beak of the bird; a suggestion which will at least illustrate the use of the character for the expression of the ideas of taking, seizing, carrying off, etc. (laqûtu, liqû, salailu). Whatever change in the original picture may thus obscurely survive in the outline character, it is enough for our purpose that that original picture was the figure of some kind of bird, in some particular attitude or posture. This fact, as will be seen, accounts for most of the uses of the character. Thus $>\mathbb{K}<\mid$ had the senses of flying, flying away, putting to flight, winged ( parâ̆su $^{2}$ in various stems; muttaprišu, of birds and locusts). These meanings were immediately suggested by the picture. Further, the use of the same hieroglyph to express the ideas of light breaking forth, the rising and shining of the sun and stars $\langle\sim Y K\rangle=$ nabâtu, săarîru), depends on the common mythical conception of the Dawn as a bird shooting up into the sky. Eos and Aurora are winged or white-winged in the classical poets; and the same idea is present in the metaphor of Ps. cxxxix, 9 : "the wings of the Morning " (בגפי שחר). The "Sun of Righteousness," too, has "wings," i.e., oblique side-beams (Mal. iv, 2). In $\sim Y \mid K Y$, "to
brighten," "purify" (ullulu), we have an extension of the same use;
 "waking, said of the eyc," respectively, this sense of $\sim Y \mid<Y$ is plainly connected with that of light (cf. Ps. xiii, 3 : "Lighten mine eyes,

Again, the favourite image of the bird sheltering and protecting its young ones, appears in $-T Y<\gamma$, "to protect," "support," "help" (hatîmu, nararîtu). Cf. Exod. six, 4: " I bare you on eagles' wings"; Deut. xxxii, ri ; Ps. xvii, S: "Hide me under the shadow of thy wings "; Ps. xxxwi, 7: "The sons of man take refuge under the shadow of thy wings;" Isa. xxxi, 5: "As birds flying," etc. See also Exod. xxr, 20 (the protecting wings of the cherubim over the Ark). Here also the hieroglyph immediately suggests its proper meaning in a suitable context.

But $-Y \mid<Y$ also denotes "a gust, blast, or gale" of wind (sîqu), "a breeze" (as in the expression bâb siqi), and "to blow," " to blow upon, through, or into" (zâqu) ; and it enters into the compound
 terms denoting storms, hurricanes, and associated phenomena (Brünnow, 2611-2619). Now winds, especially storm-winds, are conceived in many mythologies as gigantic birds, which swoop down on their prey and carry it off in beak and talons, like the Homeric
 same root APll comes $\ddot{i}_{i} / \pi \eta$, a bird of prey, perhaps the Egyptian kite : and considering that R1, DI, are malues of $\sim Y \mid<Y$, and that Lib, of which RID is a natural variant, means to seize, we may not be wrong in supposing an ultimate connexion of the Aryan root arp with these Sumerian roots). The Storm-bird, Assyrian Zii, a term
 name from $z U=T U$, "the wind" (čâru). In fact, the linear form of \&H Tu, the ordinary character for "wind," riz, $\underset{\sim}{\approx}$, may originally have figured a bird of prey in full flight, rather than a mast and sail, like the Egyptian $\frac{\sum_{\varphi}^{4}}{5}$
 nef, with which some have compared it. At all events, it is a remarkable fact that the Sumerian symbol agrees with the old Chinese form of 作 chui, birds, tsmi, wind, gale, viz., $\xrightarrow{\longrightarrow}$. (Asthis Chinese character is dialectically pronounced tai
is perfectly clear that we have here an agreement in symbol, sound, and sense, which cannot be fortuitous, and which those who maintain the Semitic origin of the Babylonian characters and their sounds may be left to account for as they can.) In the Bible also we have traces of this old conception of the wind as a bird, e.g., Hosea, iv, i9: "The wind hath bound her up (?) in its wings"; Ps. xviii, ıo: "He rode on the Cherub (ברוב). . . He did fly on the wings of the wind," where the Cherub or Stormbird is clearly the wind, as the parallelism indicates.

The ideas of taking or lifting up, seizing, carrying off (nas̆û, laqûtu, laqû̀ or liqû), bringing (abầlu), removing to a distance (nisû), sweeping away (şabâru), taking as booty or spoil (s̆alâlut), which all belong to $-Y Y<Y$, and are more or less clearly associated with one another, are symbolized suitably enough by the picture of a bird; cf. Isa. xlvi, II, "calling a ravenous bird from the east" (i.e., to spoil Babylon) ; Eccl. x, 20, "The birds of the air will carry (יוליך) the voice."

There are also uses of the idengram which apparently have no reference to its pictorial value, but only to the sounds associated with it ; i.e., they are instances of what is called in Chinese a "Phonetic" application of the character. This may be the case with -YY<Y sheep (simut), which, if read D1, may be a form of Dib, uDu, which have the same sense.

I cannot at present explain the other linear form of $-\mathrm{YY}<\bar{Y}$ (Amaud-Méchineau, No. 266), unless it be, as is possible, a mere variant of the one already discussed. An original difference is hardly necessary to account for the recorded uses of the character ; e.g., Ishtar might be called $-\boldsymbol{- Y}=|<|<Y$, as symbolized by a particular bird, or as a goddess of light, etc. And the meanings, to throw, shoot, cast, put, lay ( $\quad a d \hat{u}$, ramît), are perhaps explicable in connection with the bird-symbol. The notions of shooting and flying are not far apart; we may say, "The bird shot upward," "The arrow flew," or tice versa; meaning in both instances rapid motion through the air. The idea of settling ufon or in a particular place (ramû) may be connected with that of a bird alighting or dropping on the ground, or settling in a tree after flight.* At all events, the character (originally a picture of the leg and foot), whose

[^2]sounds, DU, RA, s.i, seem to bear some relation to those of - YY<Y (DI, RI, s.is), combines the ideas of motion and (subsequent) rest in meanings like alâku, abâlu, kâmu, s̆akânu, nazãzu.
(6) The bird-character $\boldsymbol{-}$ Y $\langle\boldsymbol{Y}$ Nam is elearly revealed as such by its linear form $\quad$ (Amaud-Míchineau, No. 28), which appears to be here again, as symbols, we
 flying with outspread wings; although in the case of the other two birdeannot be quite sure of the pictorial intention, owing to the rudeness and vagueness of the indications. n.mi denotes fate, destiny, strietly, a decree or appointment of Heaven (simtu, piristu), with which may be connected the meaning, sozernment, fashalik (pihätu; from pihat, to steer, gubernare), in the sense of an appointment by the king, as also that of punishment (annu, arnu, sin and penalty, like חֵטְּא) as decreed and imposed by authority. Read sim (from smim $=$ min $=$ nam? $)$ the character is explained by saluâlu, to name, call, appoint, ordain, a synonym of mabit. All these meanings of the hieroglyph evidently hang together, for "fate" is only the word, appointment, or ordinance of the gods (if. Lat. futum, from fari, to speak. There may also be a reference in the Sumerian symbol to augury or divination by the flight of birds). nam is therefore closely related to I-mim, which we see in the expression innimin, "word," "command," "spell" (amitu, siptu); a spell, being merely a spoken or muttered formula.

But why was the swallow-simuntu, סבובית-called the nam (or sma) bird? I think beeause of its twittering or "chattering": cf., "As a swallow or a crane, so did I chatter" (Isa xxxriii, i4). In Chinese, yen yu, "swallow-talk," means the chatter of women; and nam means "gabble," "twittering of swallows," and "muttering ineantations."

The Sumerian wam seems to be further used in the sense of rejoicing (hadd̂, rĭ̈sur?). If the restoration of the Assyrian terms be correct (sce Brönnow, Nos. 2096 s $\%$.), the idea may have been associated with the checrful noise of the swallows under the roofbeams. So in Chinese, yen (Annamite nÿ̈n), "swallow," is also "to feast," " be pleased," "pleasant," ete.

Finally, the use of Nam as a negative particle ( $=$ lî, " not") is exactly parallel to the Chinese negative 不 fitt, pu, "not," which is said to represent a swallow or other bird flying away heavenward, and 非 $f$, " not," which is a figure of wings outspread.
(7) The pictorial significance of the character inly or iss to weep (bakî) is at first sight as obscure as that of the synonymous
 obvious. The latter, being composed of $Y Y y$ eater and $\langle Y$ - eye, needs no recourse to the linear writing for its explanation. The linear or archaic figure of syr y is and similar forms, in the inscriptions of Ur -Pau of Ur (circa. This curious character 2700 b.c.) and Gudea of Sirgulla. appears to me to be a compound of 4 eye and || intended to represent flowing tears. It therefore originally pictured the weeping eye, and may be compared both with $K<Y-Y$ and with the Egyptian $\prod_{T i}$ to weep.

The same symbol wily was also read sa. © Ar, dust, dirt (ipru, epirus, turbictu-not turpu'tu, as Delitzsch, H.W.B., p. 7 I 4 ; cf.
 dust in the eye causes tears, or because dust was thrown on the head and face by mourners; and also because iss or is̆ı was another term for dust. The word SA. ©AR is apparently composed of two synonyms, corresponding to the Chinese sha, sa, sand, and ngai, dust; cf. the saying, "Fan fêng k'i êr yang sha, kiai yueh ngai," "When the wind raises and spreads sand, it is called dust." Išı, hill, mound (šadî), is dust or dirt heaped up.
(8) If the four perpendicular lines of the last hieroglyph represent running water, we can explain $\|\|$ the linear form of $=\mathrm{YY} \mathrm{E}$ or E. nu, ditch, canal, as a picture sente by the straight line crossing it (Amiadd-Méchineau, No. II 9).
(9) From the ideogram for canal is evidently derived one of the linear forms of EYYY, viz., country" (mâtu), and strates to be composed so that it means many a characteristic descrip-
 which denotes "the land," "the which the linear figure demonof $=Y Y Y$-YYY canal + great or many; canals or having many canalsion of Babylonia. The other
linear figure or the many' people,"

, that is, in cuneiform, =YYYY - YYYy house + many, households, is an equally good hieroglyph for "the " mankind" (nisu).
(ı) The and plants
 whose scent is swect"--may also be explained by reference to its linear form 日 . This eridently consists of the cut, $\because$ linear
 , which by $\stackrel{H}{\Rightarrow}$ itself is the symbol for strong drink (sikaru), and a form glyph, and we may think which exude from certain plants, and which, when compounded, constitute incense (cf. Exod. xxx, 34, sq.). Fragrant woods and herbs, as well as incense proper, were used in the Babylonian temples: and the amilu rab rikki (=riqqî), or "Naster of the Sweet Perfumes," was doubtless an official analogous to the priestly "apothecary" of Exod. xxx, 35, who, according to the Rabbis, lived in the Temple at Jerusalem.

The symbol is also read siris, the name of a goddess. As is used in Assyrian with the values ras and rak (presupposing Sumerian values ras, rag), and as is ( I )si, it seems clear that the compound character, in this application, was originally read ras. Si (or with vowel-harmony ris.si), and afterwards came to be read si. ris, just as gal. lu came to be read lu. gal. This (and other evidence) goes against the common assumption that RIG (from rag), the second value of zery, is of Semitic origin. It was probably an old Sumerian synonym of šm, meaning fragrant thing ; and from it sprang not only the Assyrian riqq, " fragrant plants," but also the Hebrew and Phenician (Exod. xxx, 35, etc.).

The siraš or sîraš which Nebuchadnezzar lavished in libations to his gods, was probably a spiced wine. The Chinese apply the term hsions," "incense," to the aroma of wine, and to fragrant woods such as cedar or cypress ; much as the Sumerian hieroglyph is an element in (Gls̆) .šm. lif, pine, and (GIs̆) .shm. dupran juniper (Syriac daphrìmī). So far as šin is simply plants, herls, etc., it may be related to $=\boldsymbol{Y} Y$ Fsam, and the Egyptian sam, vegetables, and the Chinese sung, cabbage; so far as it connotes fragrance, it seems akin
to IR．SLM，fragrance ；of．Chinese losing，to be fragrant ；hisin，to snuff the fragrance of offerings（said of Shang－ti，as IR．Simi．gubei is said of the gods in Sumerian）；hsiang，incense．
（iI）The commonest meaning of Sun，SUm，Sig，si，is to give，present，make an offering，etc．（nadamt＝ロ）．The other uses are，for the most part，easily deducible from this one，which might therefore be regarded as the original sense of the symbol． The linear figure，however，is to represent a pile of plants on an altar or table as an
 ，which is evidently intended of some kind，no doubt laid offering to a god．Now （SUN ．MU or SUM．MU or SUM．Mi）means summa，（Numb． xi，5），the Chinese sin，stan，garlick，which was not only much used by the Egyptians as an article of diet，but along with its kindred the onion，offered in piles to the gods（see the illustrations in Wilkinson＇s Ancient Egyptians）．It would seem，then，as the Sumerian hieroglyph does not depict the plants upright，ie．，as growing，but lying horizontally one upon the other，the suggestion is a heap of garlick or alliaceous plants；and as the most usual sense of the hieroglyph is to give or present，we may conclude that the custom of offering onions and garlick on tables of offerings to the gods existed in Shinar before it was practised in F．gypt．
（12）The Sumerian expression A．Dan（or A．Lam） is compounded of hit hand，side，and spouse，husband，wife． ＂Side－spouse＂naturally denotes all creatures which exist in pairs， or as male and female；and ind in fact，used of the entire animal creation，both brute and human．The literal meaning of this very old Sumerian expression seems to explain the story of the origin of woman from＂the side＂of man（Gen．ii， 2 r），and also to account for the curious statement，＂called their name Adam＂ （Gen．v， 2 ）．
＇The Assyrian equivalent，namă̌šh movie or creep about，being derived from a root，namầsu，which looks like a cognate form of the Hebrew ט゙ロ゙า mamas，to creep（Gen． i， $2 \mathrm{I}, s q q$.$) ．$

The limestone tablet，of which phototype are here presented， was found on the site of the temple of the Sun－god at Ab ̂ Habbah， the ancient Sippara．It seems to be part of an old temple－register，
not only giving an account of the flocks and herds and other property of the sanctuary, but also briefly chronicling events of interest affecting the sacred lands. This document is added here as affording an excellent illustration of the linear mode of writing. It presents some forms apparently older than those used by Gudea; $\ell . g^{\circ}$, that of 2 IB in col. 2 , line 13 . As a Sumerian word, ib means "anger," "to be angry"; and the linear symbol depicts the back, with well-marked vertebre (cf. the linear form of EGIR, "back," Amiaud-Méchineau, No. 73, with this one $=$ their No. 72). Turning the back on any one is a natural sign of displeasure. In Chinese, the character for baik is also used for to turn the back on, to oppose, dislike, etc.

On the reverse of the tablet four lines are ruled, but only two filled up. They are inscribed :-

```
SHU-NIGIN XXV UNU
    Total: twenty-five ducllings.
GUN-A--A
    Gunaa (i.e., probably the scribe's name).
```

The third line exhibits a single arrow, the beginning of a character left unfinished. The tablet has evidently been broken in half, perhaps by those who found it. The publication of the part we possess may lead to the identification of the other portion, a result much to be desired.

Notes.-Line 7. The transcription rey rather than was suggested by Mr. Pinches. Line 9. Professor Hommel transcribed DA DA URU KA-ME (?), which would mean on the borders of the city of Kame. Line 30. I have supposed that -Iリ is phonetic writing for M. Otherwise the sense would be: The city's trees (and) corn, which would be less suitable.

## NOLI ME TANGERE.

## A Mathematical Demonstration of the Exactness of Biblical Chronology.

## By Professor Dr Julius Oppert.

[Kead 7th December, 1897.]
It is sometimes useful to reconsider our opinions, with a view to rejecting them if they are recognized as erroneous, but maintaining them when they cannot be modified. Such is the case in regard to the Chronology of the Bible, from the Exodus onwards, and especially in regard to that of the kings of Judah and Israel. It has become a sort of fashion to look at the statements of the Books of Kings and Chronicles as quite inexact, ever since the lists of the Assyrian Eponyms were discovered.

I protested against this uncritical proceeding thirty years ago, and I still hold firmly to my former opinion. In the present state of Assyriological science, we are enabled to show that the Books of Kings are the real basis of our historical knowledge of the subject, and that the pretended cunciform chronology must bow to the mathematical correctness of the Holy Scriptures.

I have never asserted that the contemporary Assyrian statements are erroneous. On the contrary, they are to be considered as the most precious of all extemal documents which have been handed down to us; but they have been misunderstood by almost all Assyriological specialists. Soundly interpreted. they plainly agree with the Bible. Chronology is neither a philological nor a theological science, but a mathematical one. It would not occur to any mathematician to change a plus into a mimus sign, merely because it would better suit him, nor to modify a figure or an exponential power into something which might be more convenient to his purpose; he maintains the figures and the algelmaic terms as they result from his arithmetical operations, even if they seem to be obstinately maccommodating. But philologists with light-hearted frivolity falsify traditional numbers; they augment or they diminish the figures wacording to the quantity they need; and when these
experiments lead to a satisfactory result, they proclaim it as a marvel if $a$ plus $b$ minus $b$ amount exactly to $a$, or $b$ minus $a$ plus $a$ yield actually the desiderated $b$. This is, in fact, the only principle of all so-called chronologists. But, on the other side, if you take forty of these Scaligers or Idelers, you will find that each of them has his own prizate system of rectified chronology, which is rejected by the other thirty-nine.

The only way for an historian to get his opinion accepted, is to follow the tradition strictly and rigorously; not to believe that he knows anything better than the documents ; and, above all, not to modify any figure, unless it be in direct and flagrant contradiction with another authentic text.

In 1862, Hincks discovered the fragments of the Eponym List of the Assyrian empire, which contained about two hundred and sixty names. This list was afterwards completed by Sir Henry Rawlinson and other scholars. No internal indication whatever guided the interpreters of the cuneiform text. The well-known annual list, with short statements on the principal events of the archon's year, presented no explanatory heading or introduction: nothing at all instructs the reader as to what is the real meaning of the long succession of proper names. Not a single word gives any information why the tablet was written ; and a contemptuous silence compels the reader to guess the sense by his own sagacity.

But a very important hint is given by a single line. In the year of Assur-edil-el, a solar eclipse is mentioned as having taken place at the end of Sivan. Some scholars at once identified this celestial phenomenon with the total eclipse of June 15,763 B.C., which was very considerable at Nineveh and throughout Assyria. But as there existed some synchronous Assyrian statements concerning the kings of Israel, Ahab, Jehu and Menahem, and Ahaz of Judah, Hincks already pointed out the utter impossibility of establishing a sound chronology, without admitting a large gap in this list of archons which he had himself discovered. As Ahab and Jehu were mentioned in the Obelisk king's documents, and Ahaz, in conformity with the Bible, under Tighathpileser, one hundred and twenty years only would have elapsed between the two historical facts; while the Biblical records required an interval of half a century more. No concession whatever could enable any chronologist, even the least conscientious one, to cut out of the biblical figures fifty years. Nevertheless, since that time the gap has not been admitted
ly the bulk of so-called chronologists, who frankly declare that " nothing can be made of the Book of the Kings." This is, to say the least, the most convenient way of getting rid of a difficulty, the origin of which is due to the false interpretation of Assyrian texts.

## I.-The Assyrian Texts.

A. Since 1866 , I have been aware that the phenomenon of the end of Siran in the eponymy of Esid-sēti-iqli (written with ideographic characters Bur-an-sa-gal-ē), is not the total eclipse of June $\mathrm{I}_{5}$, 763 b.c., but that of June 13,809 b.c. Neither of these solar celipses was total in Mesopotamia. The obscuration was of $\frac{11}{12}$ th in $76_{3}$, of $\frac{9}{12}$ th (digits) in 809 . Both were considerable enough to produce a great impression upon the population. But neglecting for a moment the Biblical events, and putting aside all extraAssyrian considerations, I saw immediately that the cuneiform texts themselves were opposed to the choice of 763 . The monolith of Assur-nașir-abal, the great and fierce Nimriuld-king, whose slabs and inscriptions had been discovered by Layard, contained a passage of a decisive character. The king states that his accession to the throne coincided with a solar eclipse, which, of course, the astrologers prudently explained as a propitious portent. The text runs :-

Ina surrat sarrûtiza ina malri paliya Samas dayan kibraiti salullas̆u tâba eliya iškun-ža ina kuśsí rabis̆ ušib.
" In the beginning of my royalty, in the year of my accession, the god Samas (the Sun), the judge of celestial regions, made an echipse propitious to me, and mightily I sat on my throne."

This is the true sense of this most important text ; nobody would venture to look for a different interpretation, if the passage were not so important and so peremptory. All other attempts at translation are childish and absurd. Nobody now will be bokl enough to attack the correctness of this interpretation, which we shall establish by a philological demonstration.

Our conclusions from the passage are the following :- -
Assur-nasir-abal was king at the commencement of the Eponymy of $\Lambda_{\text {ssur }}$ Sczibami, and this archon is the 121st before the Eponym of the eclipse mentioned in the Canon. Now $763+121$ gives 88.4 , lut in $88 .+$ r.c. no eclipse took place. In 930 г..c., however (that is, $809+121$, or 9,071 , after my myriadic computation), the sun
was eclipsed on June 2 (Julian reckoning $=$ May 24, Gregorian); and Dr. de Herdtl fixes the maximum at Nineveh at $5^{\circ} 3$, nearly the half of the sun's disk, and the time of the maximum at 5 o'clock p.m. The sun set in full glory, which was a good omen. The eclipse had been total in the east of east over the South Sea, Mexico, the United States, the Atlantic, and middle Europe to Turkestan.

This is the phenomenon to which the Assyrian king alludes in the passage cited.

We may add some philological remarks concerning the word salullu, "obscuration," which is represented by an ideogram, the
 character $\bar{y}$ is andicu, "to be deficient," "to cease"; this word is employed by Sardanapalus (cf. B., R. III, 32), when he mentions the eclipse of June 27,661 в.c., of which he says: "In the evening the sun, master of the Light, was wanting;" and the term employed here is this very ustenih. This phase is exactly equivalent to the Greek iontos '臽’(mer', the Latin sol defecit;
 (=the Assyrian manalitu, which is the corresponding term, expressed by the compounds of the same sign $=1 y_{\text {- }}$ ). The ideogram
 pression for "eclipse;" in Assyrian atal̄̄ or attalū, explained,
 in the sky."

The philological demonstration of the real sense of salullu,
 established.

The notion of astrological explanation of the eclipses is expressed by the verb tarisus, "to explain," the Chaldæan and Rabbinic תרא, and cccurs very often, found in the indicated sense. So in the account of the lunar eclipse of 232 of the Seleucid era, 13 th Nisan, or April ir, So b.c.; in Strassmaier, Ars., No. if, we read, ša uttarris Uruda Šarru, "which explained, or predicted, the king Orodes." Moreover, Sardanapalus (R.V., ıo, $\sigma_{3}$ ss.) expresses himself very clearly on this subject, alluding to his protecting divinities:

[^3]abilsarräti işsura sulul sumu manahtis̆unu itruṣu cliya ultu ina Kuśśi abi banyai suibu
"They protected my state of prince successor, they explained as propitious for me their obscurations and their eclipses, after that I had taken my seat on the throne of the father who begot me."

The king does not allude to the lunar eclipse of October 25, 668 b.c., which coincided with the death of his father Esarhaddon, but was invisible at Nineveh, but to the total eclipse of October i4, 667 b.c., at the very date of his real succession to the throne. A year afterwards, at the same date of ifth of Tishri, another lunar eclipse was visible at Nineveh.

It is to be remarked that in the Sardanapalus text the ideogram $\rightarrow$ is not replaced by sallulu, written here sulul, obscuration, but that it is distinct and assumes the pronunciation of manahtu, " defect."

To quote another instance, Sargon says that, "the princes in Harran explained in his favour an eclipse, and wrote their pact according to the will of Anu and Dagon." We know that the accession of Sargon coincides with the famous three eclipses of Mardocempadus or Merodachbaladan, which are noticed by Ptolemy in the Almagest.

I believe it (puite unnecessary, and a want of the respect due to my readers, to dwell upon the insensate attempts at interpretation put forth for the highly uncandid purpose of aroiding the consequences of the true translation of this text. One scholar makes the sun "extend his protecting roof," another "his umbrella," a third would be delighted to see the sun "stretch out his shadow." But the sun has no shadow, and had not even at the accession of Issurnasirabal. To produce a shadow it is quite indispensable that an opaque body interpose itself between the heavenly body and the object. This corfus opacum in our instance was the moon. Anxious to preserve my own dignity and that of my readers, I pass over other interpretations in charitable silence!

Returning to Assurnasirabal, I assert that he mounted the throne on the and of Junc, 930 B.C. And this assertion agrees with his account of the long and various campaigns which he undertook during the year of his accession; that is during the ten months from his accession down to the commencement of his own Eponomy.

A circumstance which confirms this view is this: the first of the following month was the 14 th of June, the first of Sivan, or the first of Tammuz. To the latter case, the first of Nisan would have been the 9th of March, and the year ought to have been an embolinic one. At any rate there elapsed before the end of the accession year, ten months, or 295 days; and such a period was required to get over all the difficulties and to fight all the battles of which the king gives us information. If the eclipse had fallen at another period of the year, for instance, near the end, the question would have been much more puzzling. All these surrounding circumstances confirm the date we suggest.
B. Another hint, which has at least the value of high probability, is afforded by the series of Eponyms before and after the gap proposed by us. The reign of Assurnirar included eight Eponyms, who, with the first twelve of Tiglathpileser, make twenty. These twenty annual officers are divided into two series of ten, which follow all in the same order, viz. :-

For the reign of Assurnirar, the fainéant king :
King, tartan, majordomo, chief of the eunuchs, minister, governor of the land, governors of Reseph and of Nisibis.
For the reign of Tiglathpileser :
Governors of Arrapha and of Calah king, tartan, majordomo, chief of the eunuchs, minister, governor of the land, governors of Reseph, of Nisibis, of Arrapha and of Calah.
Then follow, in the usual want of order, the governors of Mazamua, of Si'onê, and others ; but previous to those last officers, it is the first time that any fixed rule is obserwed, and never atter that period do we meet with a similar arrangement. Moreover, it had always before been a rule without exception that the king himself occupied the office of annual officer the year after his accession which took his name. Only in this instance of Tiglathpileser is the date of the beginning of the reign given, viz., the I $3^{\text {th }}$ of Jyar ; the year which follows the accession is entrusted to the governor of Calah, and after him, the king is the Eponym of his own third year. All that is quite irregular.

Moreover, all the high dignitaries are changed. Five among the officers of the kingdom, and the governors of Reseph and Nisibis, are different persons. A single officer, the "governor of the land," bears the same name, Adad-bel-ukin. Now, in a regular succession,
it is not probable that all governors were changed in the short interval of ten years; but it is rery likely to have occurred in the course of fifty-six years, if a period of forty-six years passed without Eponymic officers. The only survivor, Adad-bel-ukin, may have leen placed again in his former position, unless, as is very possible, and as occurs so frequently, the same name was borne by two distinct individuals. It may be objected that the governors of Arrapha and Calah were certainly different persons; but this is not an argument. Two men may have been removed from office in the lapse of ten years ; but to suppose that all but one were changed in so short a time is scarcely admissible.

To this argument we must add the unusual tenor of the notice concerning Tiglathpileser: "Nabû-bel-uṣur, governor of Arrapachitis (Arrapha) : the : Sth of Iyar Tiglathpileser mounted the throne: in the month of Tishri he went to the River land!" If the succession of this king had been a regular one such a statement would not have been made, and the separating line would have been traced after the Eponymy of Nabû-bel-uşur between this and the following year, viz., that of Bel-edil-el, governor of Calah. The reason of the actual arrangement of the text is merely that the Eponymy commenced with the reign of the new king. The last year of Assurnirar has the notice: "Rebellion at Calah." It is to be helieved that with this statement the old dynasty, which had lasted 520 years, according to Herodotus, or 526 years according to Berosus, came to an end, and that from this very year the institution of the Eponyms was abolished by the Chaldæans, who calculated the time by years of the king's reign.

## II.-The Bidlical Statfments.

I shall now leave Assyria for Judæa.
My intention is to show that the Biblical statements in the Book of Kings and the Chronicles have at least as great a value as those of the Assyrian inscriptions. What we possess of the history of Judah and Israel from Solonon downwards are scanty abstracts from the Diaries of the kings, which were filled up from day to day. 'The chronology of these annals was calculated in years of an epoch, that of the Exodus itself, which took place 4 So years anterior to the inauguration of the building of the Temple. This may be mathematically proved by as many as two hundred chronological statements handed down to our times in different parts of the Holy

Scriptures. As nobody is able to invent false history without being immediately found out, we have more than sufficient means for controlling the correctness of the dates, which corroborate each other ; and the figures of the historical books of the Old Testament, borrowed and derised from original and contemporary documents, have the inestimable force of irrefragable witnesses.

For the purpose of this paper, we have merely to consider the period where cuneiform and Biblical records meet each other. This period, very luckily, is posterior to the only serious difficulty which arises from the reigns of Joram, Jehoshaphat, and Jehoram of Judah. This interval concerns exclusively the reigns of six rulers of Judah: Athaliah, Joash, Amaziah, Uzziah or Azariah, Jotham and Ahaz. Our problem is resolved with the accession of Hezekiah. The kings of Israel whom we must consider are from Ahab onwards, viz., Jehoram or Joram, Jehu, Jehoahaz, Jehoash, Jeroboam II, Zachariah, Shallum, Menahem I, Pekahiah, Pekah, and Menahem II. The last does not figure in the preserved fragments of the Book of the Kings ( $2, \mathrm{xv}$ ) ; and his existence is only known through the Assyrian texts.

The interval to be examined includes 160 or 16 r years ; and our calculations are supported by fifty-one Biblical statements. Among these fifty-one, three only are to be rejected, as in flagrant contradiction with other controiable Biblical statements; and of these three, only one contains a corrupt number.

It is well known that the accession dates of the Judæan kings are given in years of the rulers of Israel, the beginning of whose reigns is likewise given in years of the contemporaneous kings of Judah. The Books of Kings specify the ages of the kings of Judah, the duration of their reigns, the synchronisms with the Israelite kings, and the numbers of years of the reigns of the latter. The Chronicles limit their information to the ages and the length of the reigns of the kings of Judah.

I put together all these statements in a book with the title: Salomon et ses Successeurs: Paris, 1877. I still maintain the conclusions of that zoork after twenty years. The modifications which some recently discovered documents oblige us to introduce, concern only differences of a few months.

We must, previously to all discussion, explain the mathematical meanings of the statements. When there occurs a notice: "In the $n$th year of the King $A$," what is the meaning?

Two systems have been used in ancient and in modern times. The first is that of the Biblical records, counting the years from the day of the beginning of the reign. This is the system employed by the Roman Curia, and in England; according to which we are in the 6 rst year of the reign of Queen Victoria, and the 20 th year of Pope Leo Xill.

The $u$ th year means, that from a certain event down to the mentioned epoch, $n-1$ years and a fraction have elapsed. The fractions are expressed by (ireek letters. The $n$th year = years $n-1+\ldots$. The other way, the more artificial one, is to count the first year of a reign only from the commencement of the following civil year. This is, for instance, the account of the Babylonian dates in the tablets, and of the Assyrian kings, when they avail themselves of the expression pallu. Eponyms commence, like the royal annals and the private tablets, with the ensuing Nisan, March or April.

In this system, the first year of Queen Victoria would begin the ist of January, 1838 , and she would now be in her year 60 . Pope Leo XIII would be in his year 19, as his first would have commenced with the ist of January, 1879. As we have an era, we need not have recourse to so awkward a method. But the Babylonians were compelled to do so: for instance, the Temple of Jerusalem was destroyed in the 19 th year of Nebuchadrezzar, i.e., the year 18 of the Babylonian reckoning : on the 1 oth of Ab , that is Sunday, August 27 (Julian Calendar), August 21 (Gregorian), 587 B.C.-(586 of astronomers), 9,414 .* These are the different dates:-
a. Athaliah reigned six years; her accession was about contemporaneous with the usurpation of Jehu of Israel. She was murdered in the 7 th year of Jehu: Joash succeeded.

Jenu reigns 28 years.
He dies in the 2 grd jear of Joash, when his son Jehoahaz succeed him.
Jehoahaz reigns 17 years, until the 39 th year of Joash.

[^4]In the 39th of Joash of Judah, accession of Joash of Israel. Joash of Judah dies in the and year of Joash of Israel, having reigned 40 years.

Therefore:

$$
\begin{array}{rlll}
\begin{array}{l}
\text { Joash before Joash of Israel }
\end{array} & \cdot & \cdot & 3 S+\nu \\
\text { Joash zeith Joash of Israel } & \cdot & \cdot & 1+\xi \\
\text { Joash reigns . . . } & . & . & \frac{1+(\nu+\xi)}{39+(\nu+\xi)}
\end{array}
$$

It depends on the values $\nu$ and $\xi$ whether Joash reigned more or less than 40 years.

Jehu reigned somewhat more than 28 years.
Jehoahaz reigned 17 years :
End of his power, Joash . . . $3^{8}+v$
Commencement . . . . . . $22+\pi$
Reign of Jehoahaz . . . . $\overline{16+(11-\pi)}$
But $n-\pi$ must be greater than a half, therefore $n$ is much more, consequently the reign of Joash of Judah $[39+(r+\xi)+\Delta]$ must be either a little less, but probably more than forty years.
b. Amaziah reigned 29 years.

He became king in the second year of Joash of Israel.
In his $15^{\text {th }}$ year Joash of Israel is killed, having reigned 16 years.

Amaziah survives Joash 15 years, as expressly stated in 2 Kings, xiv, 17.

Jeroboam II succeeds to his father Joash.
Amaziah is murdered, therefore, in the $14^{\text {th }}$ or 15 th year of Jeróboam.

$$
\begin{array}{lcc}
\text { Joash of Israel before Amaziah. } & 1+\xi \\
\text { Joash of Israel zeith Amaziah . } & \frac{1++\rho}{15+(\xi+\rho)}
\end{array}
$$

As $\xi$ is much less than a half, the reign of Joash was about if years, littie more or less. But on the other way :-

Amaziah zeith Joash . . . . . $14+1$
After Joash .
$15 \pm \cdots$

$$
29+(\rho \pm \cdots)
$$

The period of 29 years is, therefore, correct for Amaziah's reign.
c. Uzziah, or Azariah, reigns I 5 years with Jeroboam II.

In Uzziali's 3 Sth year Zacharial reigns 6 months.
In Uzziah's $39^{\text {th }}$ year Shallum reigns $\pm$ month.
In Uzziah's $39^{\text {th }}$ year Menahem begins a reign of 10 years.
In Uzziah's 5 oth year Pekahiah begins a reign of 2 years.
In Uzziah's 5 2nd year Pekah begins to reign.
U'zziah dies, after a reign of 52 years, in the 2 nd year of Pekah.
For the reign of Uzziah we have consequently:-

Uzziah reigned, consequently, a little more than 52 years, and the sum of the fractions $\sigma+\tau$ must be less than a half.

Everything in these statements concerning the life and the reign of Uzziah is consistent with itself. He was proclaimed king at 16 years of age, and lived 68 years. The seven Biblical passages concerning the duration of his reign of 52 years are absolutely unassailable. But there is a very difficult question concerning the reign of Jeroboam II, who, according to 2 King xiv, 2S, reigned 4 I years, while other irreconcilable statements of the book considerably lengthen the interval between his accession and his death. Because we have

$$
\begin{array}{cccc}
\text { Jeroboam before Uzziah } & \cdot & \operatorname{I} 5 \pm \omega \\
\text { Jeroboam with Uzziah } & \cdot & \cdot & 37+\gamma \\
\text { Reign of Jeroboam } & \cdot & 5^{2}+(\gamma \pm \omega)
\end{array}
$$

But y must be more than a half, because Zachariah, Jeroboam's son, reigned six months, from the 38 th to 39 th year of Uzziah.

$$
\text { Therefore } \begin{aligned}
(3 S+i)-(37+\gamma) & =\frac{1}{2} \\
1+(\hat{i}-\gamma) & =\frac{i}{3} \\
7-\hat{c} & =\frac{1}{2}
\end{aligned}
$$

Therefore, between the two limits of the reign of Jeroboam II are 52 or 53 years. But he reigned in Samaria only 4 I years; for the Syrians deprived him of his kingdom in his $27^{\text {th }}$ year. This a7th year is guoted ( 2 Kings xv, 1) as the epoch of Uzziah's cleation to the throne, in contradiction to all other passages.

Jeroboam was expelled from Samaria from b.c. 798 to 787 , as I shall show further on ; the whole history of the warlike and gallant king has been systematically destroyed by the Jews. Chapter xv commenced indeed, as at present, with the words: In the 27 the year of Jeroboam. . . . , but then followed the report of his defeats and victories. All these passages have been cancelled or torn out. We shall return to this every interesting subject.

Uzziah became king 15 years after the death of Joash, who was immediately succeeded by Jeroboan II. The whole history of this long reign is almost lost: only the prophets Hosea and Amos supply a few obscure hints about Uzziah and Jeroboam II. But the chronology of Uzziah is quite safe ; it is controlled by nine passages of the fifteenth chapter of the Second Book of Kings. After Zachariah's ephemerai reign, his murderer Shallum reigned during one month and . . . days: the number of days is omitted in the text. If Shallum was king one month and a half, we must add $\frac{1}{8}$ to the $38+8$ of Zachariah in order to fix the reign of Menahem, which lasted till the 50 th year of Uzziah, or till $49+x$. We shall have :

| End of Menahem's reign . . | $49+x$ |
| ---: | :--- |
| Begimning of Menahem's reign | $\cdot$ |
| Menahem reigned . . . | $\frac{3^{S}+\hat{i}+\frac{1}{x}}{11+x-j-\frac{1}{8}}$. |

But the text of 2 Kings xv gives only to years for this reign. If this statement is right, $\chi$ must be less than $\hat{o}+\frac{1}{8}$; and if the result is to agree with the Biblical text, we shall get :

$$
\begin{aligned}
\mathrm{II}+\lambda-\hat{r}-\frac{1}{8} & =\mathrm{IO} \frac{1}{2} \\
\chi & =\hat{o}-\frac{3}{8}
\end{aligned}
$$

Consequently $x$ must be very little, because $\delta$ cannot be greater than $\frac{1}{2}$ : and, as in the account concerning Jeroboam II and Zachariah, we saw then $\gamma-\dot{i}=\frac{1}{2}, \gamma$ must be nearly one, and the reign of Jeroboam muist be nearly $53 \pm \omega$.

Pekahiah, son of Menahem, ruled over Samaria two years, and was killed by Pekah, in the $52 n$ year of Uzziah, that is $5 \mathrm{I}+\sigma$, and $\sigma$ must be very little, for $52+(\sigma+\tau)$ does not amount to $52 \frac{1}{2}$. Moreover, we shall have :

$$
\begin{array}{ccc}
\text { End of Pekahiah . . . . . } & 5 I+\sigma \\
\text { Commencement of Pekahiah } & \cdot & 49+\lambda \\
\text { Reign of Pekahiah } & \cdot & 2+(\sigma-\chi) .
\end{array}
$$

As $\sigma$ and $\lambda$ are looth very small values, Pekahiah reigned just two full years, a small fraction less or more.

All these reigns fill up the last fifteen years of Uzziah, whose reign camot have covered less than $52 \frac{1}{2}$ years.

Jotham, the son of Uzziah, reigned 16 years, from the and till the 17 year of Pekah, therefore we have:

| End of Jotham | Pckah $16+v$ |
| :---: | :---: |
| Commencement of Jotham | $1+\tau$ |
| Reign of Jotham | $15+(u-\tau)$ |

The fraction $u$ may be great, but $\tau$ is small ; therefore, at any rate, Jotham cannot have reigned 16 complete years, because $v-\tau$ must be always smaller than one.
$e$. The chronology of Ahaz presents some difficulties, as there is a discrepancy of one year in the account: we have not of course, to deal now with the still more puzzling reign of Pekah. According to two passages, Ahaz reigned i6 years: in his 12th year Hosea slew Pekah, and Ahaz died in the 3rd year of Hosea. These statements are:

$$
\begin{array}{r}
\text { Ahaz before Hoshea . . . . . } \\
\text { Ahaz ruith Hoshea . . . . }
\end{array} \frac{11+\phi}{2+\psi}
$$

Even if we suppose $\phi$ and $\psi$ very great, the expression cannot amount to tzo, and always we shall obtain $15-\lambda$. It is impossible, on the other side, to change the notice concerning the third year of Hosea, for the death of Ahaz and Hezekiah's accession to the throne : thercfore-

In the 12 th year ( 2 Kings xvii, 1) must be changed into the 13th:

Or, the two passages of Kings and Chronicles give r5, and not 16 years for the reign of Ahaz.

We maintain, in this instance, the number $\mathrm{r} \sigma$; the question is of no importance at all, as the general chronology cannot be affected ly this negligible difference.

Almost six years after the death of Ahaz, Samaria was taken and destroyed by Sargon. This most important event took place in the commencement of January or February of the year 721 B.c.- 720 , 9,280 . The death of Ahaz is consequently to be referred to the commencement of 727 1.c. We have not here to discuss the reasons of this determination, resulting as it does from the various
passages of the Bible. With respect to the accession of Sargon, or the 12 Tibet, the Babylonian Chronicle discovered by Mr. Pinches has furnished us with the means of fixing the dates incontestably.

The results have been set forth in a paper : Die Schaltmonate ber den Babyloniern und dic chaldäisch-ägyptische Aera des Nabonassar, in the Zeitschrift der Deutschen Morgenländischen Gesellschaft, ıS97, p. 196 ff.

Consequently, we have to recognize as historical facts, the following undeniable Biblical statements, viz.:-
Athaliah reigned
Jehoash . . . . . . . . . . . . . $\mathbf{C l}^{6}$ years.

As Athaliah and Uzziah reigned certainly, Joas and Amaziah ruled probably somewhat longer than 127 years, and although Jotham and Ahaz a little less than 32 years, we may admit as more accurate $165+$ o. We must not forget that Athaliah's usurpation was a very short time posterior to that of Jehu.

In order to get the date of this latter fact, we must place it 165 years and some months before January-February, 721 b.c. Therefore, with a mathematical certainty, Jehu seized the Israelitish crown in the last half of $S 87$ b.c., or 9,114 .

I cannot refrain from repeating that I have strictly respected the written numbers: and that all those hypothetical expedients of assuming minorities, coregencies, and so forth, are absolutely to be excluded from consideration. I read, what is to be read, because it is zeritten.

This is the real and the only criterion of historical investigation : we must bow to these statements, because the men who wrote them were better instructed than we are, who, apart from their testimony, could know nothing about the honestly transmitted tradition.
III.-Confirmation.

We shall now see that these Biblical statements are merely confirmed by the Assyrian texts.

On the black obelisk of Nimroûd, Salmaneser III mentions the tributes sent to him by Jehu. In a passage of his annals he places this event in the 18th year of his reign, by which all understood his I8th cizul year or palu.

On the stele at the Tigris sources, he mentions, in his 6th civil year, Ahuctrue Sir'alaï," Ahab of Israel. As between Ahab and Jehu, Ahaziah and Joram reigned almost 13 years, it is evident that the mention of Ahab coincides with his end, and that of Jehu with the beginning of this king's rulc. Immediately after his bloody usurpation, and fearing the hostility of Athaliah, it was quite natural that he should be anxious to gain the friendship of the mighty Assyrian.

The iSth Eponomy of Salmaneser III is that of Bel-abuya, seventy-eight years before the Eponomy of Edid-seti-iqbi, when the solar eclipse was observed and recorded. Admitting as only possible the date of Soy for the mentioned Eponomy, we obtain for the Eponomy of Bel-abuya the date of 887 b.c. !

This Eponomy commenced with the first of Nisan, either March 28 or April 26, and ended either on March 17 or April 16 of S86 в.c.

The accession of Jehu, too, is to be fixed in the latter half of 887 b.c.

This marvellous agreement will be regarded by every impartial and scientific scholar as a decisive demonstration.

Consequently we must admit a gap in the list of Eponoms at the very place which I pointed out long ago.

> IV.-Peraif, Manahem II, Azariah, Jeroboam II, Pul.

The combined statements of the Bible and the cuneiform inscriptions guide us to establishing the real historical facts.
A. During the gap of nearly 46 (perhaps 47) years Pul, the Chaldxan, reigned in Nineveh, who reckoned the years of his reign according to the Babylonian custom. But hitherto no document emanating from his reign has been observed. His existence is attested only by the Biblical notice that he overran Palestine during the reign of Menahem of Israel ( 772 to 761 b.c.). After Uzziah, the contemporary of Menahem, whom he survived 3 years, Jotham ruled in Judah for 16 years. During that time Tiglathpileser usurped the Assyrian power, is years after Uzziah's death. The
successor of Jotham had to do with Tiglathpileser, who supported him against Rezin, king of Damascus, Pekah, son of Remaliah, and Azariah, son of Tabeël. Tiglathpileser put to death Rezin, a fact stated by the Bible and the Assyrian texts. The Assyrian ruler mentions Ahaz (Yaukasi), the Judæan, and Pekah (Paqaha) ; and he tells us likewise that Pekah was murdered by Hosea (Usie). In all instances where we have cuneiform documents, they are conformable with the statements of the Bible.

But Tiglathpileser, when in his ninth year he names Ahaz of Judah among his tributary princes, does not mention Pekah, as he actually does in a later text, but calls the Samaritan prince Menahem (Menihimmut Samirimaï. The undeniable conclusion from these facts is that the Menahem named by Tiglathpileser can not be the same person as the Menahem of the Book of Kings, the contemporary of Uzziah, who had been dead almost twenty-five years.

This irrefutable reasoning is supported by another fact. The same Tiglathpileser speaks of a certain "Azariah the Judæan" (Azariyau Yakidaï), who can by no means be identical with Uzziah or Azariah, King of Judah, who also had been dead for twenty-three years. As the other Azariah was alive, he was another person. I hope not to be contradicted on this point.

This distinction between the two Azariahs is the more unexceptionable, as we have in the Hebrew texts no fewer than sixteen individuals named Azariah.

Our information about the lost kings of Judah and Israel is so very scanty, that we must be grateful to every chance that favours us with a hint. Now, in the seventh chapter of Isaiah we read a highly important passage referring to the quarrels between Ahaz, son of Jotham, on the one side, and Rezin of Damascus and Pekah, son of Remaliah, on the other. The prophet promises divine protection to the king of Judah, whom his antagonist wanted superseded and replaced by "the son of Tabeël." We read (verses) 5 and 6:
5. Aram has formed a bad purpose against thee, "with Ephraïm and the son of Remaliah, and say:
6. We will go up against Judah and excite them, and deal betwist us, and make king of it the son of Tabeël."
The son of Remaliah is Pekah, and the son of Tabeël (written Tab'al in the Massoretic text) had certainly a personal name
belonging to him as distinct from that of his father. He was, of course, the enemy of Tiglathpileser, who protected thaz against his antagonists, and for that reason he is mentioned in the annals of the Ninivite ruler.

Thus the cuneiform texts complete and corroborate the Biblical statements, which without them would remain unintelligible.

The son of Tabeil is the "Azariah, the Juden" of the Tiglathpileser amnals.
B. Clear and indisputable as are the Biblical notices about Hoshea, as exiguous and incomplete are those concerning his predecessor and victim, Pekah: but on this head also the Assyrian documents explain some apparent contradictions of the Bible.

It is said (2 Kings ii, 15) that Pekah ruled twenty years over Samaria. Nevertheless this figure is contradicted by four other passages, consistent with themselves.

It is said that Ahaz succeeded to Jotham in the 17 th year of Pekah, and that Hoshea murdered Pekah in his own 12 th year, according to the now existing Biblical text. But we have already pointed out that more than 12 years must have elapsed between the accession of Mhaz and the death of Pekah. We have therefore-

| Pekah before Ahaz | . | $16+v$ |
| ---: | :--- | :--- |
| Pekah with Ahaz . . . | $12+\phi$ |  |
| Reign of Pekah | . | $\frac{12+(w+\phi)}{2 S+(w)}$ |

The interval between the crime of Pekah, who slew his predecessor Pekahiah, and his own violent death is more than 28, perhaps more than 29 years. Nearly the same result is obtained, if we retain merely the 12 th year of the text.

$$
\begin{aligned}
& \text { Pekah with Uzziah . . . . I }+\tau \\
& \text { Pekah with Jotham . . . . }{ }^{15}+(11-\tau) \\
& \text { Pekah with Ahaz . . . . II }+\phi \\
& 27+(v+\phi)
\end{aligned}
$$

where $"+\phi$ must be greater than unity.
Nevertheless, instead of those required 29 years, the Book of Kings (II, xr, 27) limits the government of Pekah in Samaria to twenty sears. This figure is not erroneous: let us remember that among the loyal tributaries of Tiglathpileser is mentioned the " Menahem of Samaria," who cannot be the homonymous antagonist of P'ul. P'ekah, notwithstanding, was certainly on the throne in

Samaria when the Assyrian ruler came, in his i3th year, to Syria and Palestine, and overthrew Rezin at Damascus; while Menahem ruled in the Israelite capital in the 9th year of the king of Nineveh. Consequently, the cuneiform records compel us to respect the Biblical relation, and explain how it is possible to admit Pekah ruling only during twenty years, although twenty-nine years passed from his accession to his death.

During mine years, Menahem II ruled Samaria.
And in this connexion we must examine the one false number among so many genuine figures. It is said ( $2 \mathrm{Kings}, \mathrm{xv}, 30$ ) that "Hoshea slew Pekah, and reigned in his stead, in the twentieth year of Jotham, son of Uzziah." *

It is, before all, to be observed, that never elsewhere is a synchronism found after the relation of an event, that the chronological notice always occurs at the beginning of the report. The original text was: "And Hoshea . . . . . . . . . . . and reigned in his stead." In the . . . year of Jotham, the son of Uzziah . . . . . . ."

The now destroyed text goes on to relate a fact which the author of this mutilation had an interest in obliterating, and which probably referred to this very Menahem II. The like obliteration of an important event can be proved in the history of Jeroboam II.

But this is not the only remark to be made on these words: it cannot be the twentieth year, as Jotham reigned only sivteen years. The passage is simply mutilated and corrupt.

It is impossible to imagine what nonsense has been put forth on these poor five words, "In the twentieth year of Jotham, son of Uzziah" (they are but five in the Hebrew) ; and we openly affirm that this has been done mala fidc. Orerlooking the two hundred sound statements, some detractors of the Biblical chronology always quote these five words, in crder to annihilate its credibility.

Very likely the restoration of Pekah took place in 735 B.c., a short time before Tiglathpileser's expedition against Palestine, which is referred to in the Eponym List. Menahem may have ruled from 744 to 705 , and the Bible text, when it was complete, may have run in this way: "In the 15 th year of Jotham, son of Uzziah [Menahem, son of . . . . . . . made a conspiracy against Pekah . . . . . . .];" describing the rebellion, the flight of Pekah, and his subsequent return to Samaria.

[^5]In fact, Pekah reigned 20 years-the first time, 15 years; the second time, 5 years. We will, therefore, fix his reign thus :-
Pekah . . . . . . . $759-744$
Menahem II . . . . .
Pekah restored . . . .
$744-735$
$735-730$

This is the solution of the Pekah question.
6. The liblical text attributes to Jeroboam II 4 y years, while 52 or 53 years elapsed between his accession and his death. During his reign, the kingdom of Israel came very near to being absorbed and amnihilated by the Syrian monarch, who for 11 or 12 years even deprived Jeroboam II of his kingdom. The hint of this is given in the mysterious passage of 2 Kings, xiv, 26-28:-
"For the Lord saw the affliction of Israel, that it was very bitter : for there was none shut up nor left at large, neither was there any helper for Israel. And the Lord said not that he would blot out the name of Israel from under heaven: but he saved them by the hand of Jeroboam the son of Joash."

Moreover we read in Isaiah vii, S, 9 :-
"For Damascus is the head of Syria, and Rezin the head of Damascus, and for the second time after sixty-five years Ephraim shall be cut off from the nations.
"And the head of Ephraim is Samaria, and the head of Samaria the son of Remaliah."

Remember also that in 2 Kings, xv , I , it is said in our texts that in Jeroboam's 27 th year Uzziah succeeded to his father Amaziah, while the correct statement puts this event in Jeroboam's 15 th year.

All mention of this temporary disappearance of Israel has been entirely obliterated and intentionally destroyed. But the above quoted passages are more than sufficient to re-establish the real historical facts, notwithstanding the destruction of all documents, including the prophecies of Jonah referred to in the Book of Kings (II, xiv, 25), in connexion with this reign.

In his 27 th year Jerohoam lost his kingdom, and Isaiah threatens that, after sixty-five years, Pekah will suffer the same misfortune.

The $27^{\text {th }}$ year of Jeroboam is to be fixed as $79^{8}$ i.c., and as the threatened overthrow of Samaria and the deportation and exile of a great part of Israel happened in 738 , the prophet alludes to a fact which took place sixty-five years previously, i.e., in 798 i.c., the $27^{\text {th }}$ jear of Jeroboam II, who by his heroism delivered Israel from the Syrian yoke.

I have referred to the allusions preserved in the prophecies of Hosea and Amos, and some other passages.

Consequently we have this scheme:-

$$
\begin{aligned}
& \text { Jeroboam II, first reign . . . . . . } \$_{25-79} \\
& \text { Temporary destruction of the Israelitic } \\
& \text { power by the Syrians . . . . . . . } \\
& \text { 79 } S_{-7}-77 \\
& \text { Jeroboam II, after his restoration . . . . } 7 S_{7-773}
\end{aligned}
$$

Therefore, as the Biblical text affirms, Jeroboam II reigned 41 years: the first time 27 , the second 14 years.

This restoration of historical facts results from as many as fi'te distinct Biblical statements.
D. King Pul of Assyria, the contemporary of Menahem, reigned before 762 в.c. He preceded the dynasty beginning with Nabù-sum-úkin, the predecessor of Nabonassar, as the list of kings states, $3^{1}$ years before Chinziros, who mounted the throne in $73{ }^{1}$ b.c. He is of course more than 30 years anterior to the second l'ul, the Poras of the Ptolemäc canon, the antagonist of Tiglathpileser, whom he turned out from Babylon at least once if not twice.

It is insensate to say that the Bible in the same chapter, at the distance of a few lines, called the same king first Pul and then always afterwards Tiglathpileser.

The pretended identity of Pul and Tiglathpileser is not worthy of discussion; it is contradicted by all historical documents, whatever their origin.

## V.-Conclusion.

And now we may for a moment examine the hypothesis of the non-interruption of the Assyrian eponymic tablets. If we admit that supposition, we are obliged to put the death of Ahab in $S_{54}$, and the accession of Jehu in $S_{41}$ b.c. ; and we must reduce the interval between the downfall of Samaria and the reign of Jehu from 166 to 120 years.

I frankly confess that I feel unable to get over this impossibility : I firmly believe no body else can.

All attempts to identify the eclipse of Esid-seti-iqbi with that of June 15,763 e.c., have been complete failures. It is possible that the years from Tiglathpileser onward may be chronologically fixed as if there was no interruption ; I myself established the fact of the probability of this in spite of my former scheme. The com-
putations resulting from the Ptolemaic canon, compared with some Assyrian dates, render this fact most probable, but there may also exist a difference of a year or two. Hitherto we have no chronological or astronomical statement to fix in a scientific way the later eponymic years, but it is highly probable that the gap between Assurnirar and Tiglathpileser is not 45 or 47 , but just 46 years (the reign of several monarchs, e.g., Artaxerxes Mnemon).

The chronology of the Assyrian and Israelite kings may, therefore, be tabulated in the following way:-

## Assyrian and Chaldean Rulers.

Adad-nirar II
Tuklat-Ninip.

The dates referring to Shalmaneser and Sargon can now be fixed with an astonishing precision by the statements of the Babylonian Chronicle, combined with the famous lunar eclipses of 721 and 720 b.c., mentioned by Ptolemy (Alm. IV, 6). It is principally the first phenomenon of Monday, March 19, 72 I B.C., which according to the cunciform texts the translation of which guided the Alexandrian astronomers. The 2gth of Thoth was the Egyptian translation of the Chaldæn 27 of Nob, first year of Mardacompadus or Merodachbaladan, and the cuneiform text certainly fixed the eclipse at the I th of Nisan. These are the precise dates:-

Accession of Shalmaneser (Tebeth 25), Friday, January 26, 726 b.c. Death of Shalmaneser (Tebeth i), Friday, December 9, 722 b.c.

Accession of Sargon (Tebeth 12), Tuesday, December 20, 722 b.c. Downfall of Samaria, January-February, 72 I b.c. Accession of Merodachbaladan (Nisan 1), Tuesday, March 6, 721 b.c.

The fixation of Shalmaneser's accession may go higher up for a month to Thursday, December 28, 727 B.c. We do not know the origin of this year.

## Kings of Judah.

Destruction of the Temple, Sunday the 27th of August 587
The ages of the kings prove the high credibility of the Biblical numbers. It is evident that, in view of the ages of these rulers, it is impossible to shorten their reign. There may be a few clerical errors. Hezekiah, whose father Ahaz died young, was not aged 25 , but 15 years, at his accession: the father was only 11 years older than the son. We may well be astonished that among so many
figures there occur so few errors and faults: six or seven in more than two hundred. In the birth-figures, there is no error of number at all.

> Kings of Israel.

Hoshea ..... 730-721
End of the kingdom of Israel, February 721.

And who would have been able to ineent all those figures? By whom would they have been forged, and why?

All different systems concerning as well Assyrian as Judæan history, which are in contradiction to the biblical statements, must be rejected.

We belicse we have completed the demonstration of the mathematical exactness of the figures of the lible, and have shown that it is guite an unscientific way to neglect and to despise them, and peculiarly so, when the Assyrian documents are misunderstood by
those who despise historical statements. We must not forget that the Assyrian history itself is only known by fragments, and that we have hitherto no documents from Adadnirar III, Shalmaneser III. Assuredilel, Assurnirar, and Phul, who had to deal with Jehu, the son Joash, Amaziah, Jeroboam II, Uzziah, and Menahem I. The Assyrian soil has unluckily been neglected for forty years, although the documents of all these kings undoubtedly still exist somewhere, and could be found. We can only deroutly hope and wish for new discoveries, which will definitely and decidedly settle much of the chronology of the Holy Scriptures.

# FRAGMIENTS OF THE SAHIDIC VERSION OF THE PAUline EpISTlES, ETC. 

Nö̃ember 12, 1897.
Dear Sir,
In the Proccedings of the Society for Nov., 1 S95, there is a notice of some fragments of the Sahidic version of the Bible which I procured in Egypt during the previous winter. The following account of some larger fragments procured about the same time may perhaps be deemed of sufficient interest to be brought before the Society.

Vellum remains of a MS. of the Sahidic version of the Pauline epistles (and other matter). The leaves must have been originally about $7 \frac{1}{2}$ inches by 6 inches; the pages were numbered as usual in Koptic MSS., but on only two leares do the numbers remain. There are two columns to a page. The remaining portions are :(a) Part of a leaf containing, recto, 1 Cor. $x$, 29-31, rerso, 1 Cor. xi, $\mathbf{I}-3$, mutilated. (b) Part of a leaf, recto, I Cor. xi, $\mathbf{1} 2-14$, verso, 1 Cor. xi, $\mathrm{s} 5^{-\mathrm{I}} \mathrm{S}$, mutilated. (c) The lower part of a leaf containing portions of i Cor. wi, II-I 9 , and attached to it, $(d)$, a much injured leaf containing ${ }_{11}$ Cor. iv, $\mathbf{I 2 - I S}, \mathrm{v}, \mathrm{I}-6$; this leaf is paged $\overline{\mathrm{p}} \bar{\wedge} \bar{H}$, $\overline{\mathrm{p}} \bar{\wedge} \bar{\theta}(138,139)$. (i) A leaf, of which the recto is almost illegible; the arerso paged p.e日 ( $1+5$ ) contains II Cor. vii, $\mathbf{~ - ~}-7 .(f)$ Forty-one leaves containing Galatians v, 26 to end, Ephesians, Philippians, Colossians, 1 and 11 Thessalonians, 1 Timothy, 11 Timothy (1, i-iv, 3) and five leaves containing if Timothy, iv, 22 to end, Titus, Philemon. In addition to minor mutilations, particularly in the outer column of each page, the top of every leaf, with the number of the page and about two lines of text at the top of each column, is gone. Between the end of one epistle and the beginning of the next is a space equal to about four lines, containing (separated by some slight ormamentation) the subscription of one epistle and the title of the next. The titles and subscriptions (which are identical in form) are very short, є.g., ТЄ прос е屯есsorc, Тє прос
 first column of the last remaining page, and the second column is ocrupied by St. John's (iospel i, i-6 (by the same hand as the rest of the $\operatorname{MS}$.$) . As the heading is lost, it is impossible to say whether$ the MS. originally contained the whole Gospel or only the beginning
of it.* There must have been at least one more leaf, as the passage ends in the middle of a sentence, or pw[ret]. The MS. is written in a comparatively small Uncial character; the titles and subscriptions are in the same character as the text, and the initial letters of the epistles are no larger than the others; it is not, however, safe to judge of the age of undated Koptic MS.

The whole MS. is in a most fragile and dilapidated condition from damp and hard usage, the vellum is extremely thin and almost falling to pieces, especially at the edges of the leaves.

So far as can be judged from the lists given by Gregory (Prolegomena to Tischendorf's N.T., pp. 884-892), and Miller (Scrivener's Introduction, $4^{\text {th }}$ edition, II, pp. 127-139), some of the matter in these fragments is not to be found elsewhere. As a specimen I give what is left of the Epistle to Philemon, preserving the lines and punctuation of the MS. The title and beginning are lost :-

## HOOR LINTEL DISCOVERED BY MR. GEORGE SMITTH AT KOUYUNJIK.

> 7. Powis Square, Brighton, 8th January, 1898.

My dear Mr. Rylands,
I find from the paper entitled "Note sur un linteau de porte découvert en Assyrie par George Smith," published in the Proceedings of the Society of Biblical Archeology, Vol. XIX, Part 6, that a discussion has taken place regarding the origin of a lintel of a doorway which is said to have been discovered in the palace of Sennacherib by the late Mr. George Smith. Mr. Smith seems to have mistaken it for an Assyrian object, whereas it is purely of Sassanian or Parthian remains, as I found on excavating at Kouyunjik that those barbarous people had occupied the ruined palaces of Sennacherib and Assur-bani-pal after the destruction of the Assyrian monarchy, and erected their rude buildings within them. The said Mr. Smith made no new discovery when he was sent to Mesopotamia, in 1873, by the proprietors of the "Daily Telegraph," but he merely excavated in the palaces of Sennacherib and Assur-bani-pal, discovered by Sir Henry Layard and myself in 1847 and 1853 respectively. As Mr. Smith was not much experienced in Assyrian researches, he mistook Sassanian art for that of Assyrian, because he mentions in his work entitled "Smith's Assyrian Discoveries," p. 146, that "this curious lintel is the first Assyrian object of the kind which has been discovered."

Both Sir Henry Layard * and I discovered in the Assyrian palaces different objects and coins of Sassanian, Roman, and (irecian origin, and I myself found in 1878 a stone statuette of the latter nationality deep below ground, which is now in the British Museum.

> Believe me, Yours very sincerely, $$
\text { II. Rassan. }
$$

## TWO TEXTS REFERRED TO IN REPORT OF THE ORIENTAL CONGRESS.

Dear Mr. Rylands,
In the Report of the Paris Oriental Congress in the last number of the Proceedings, reference was made to a new tablet, relating to the Story of the Deluge, introduced by Father Scheil. I now send you his final translation of it, as being peculiarly interesting to the Society. Also it is probable that this tablet will prove of special value, as it is derived from Sippara, and presents a version of the story hitherto unknown in cuneiform texts. There was reason to anticipate this, because the legend as to Chronos and Xisuthros, as bequeathed to us by Berosus, which he also associated with Sippara, differs also from the Babylonian ones hitherto known.

The new text is also valuable because it is dated about 2250 b.c., and yet was only a copy of a document so ancient when re-engrossed that the original text is stated to have been in some places illegible.

The other text is M. Naville's translation of part of the famous Meneptha stela relating to the Israelites, which he presented to the same Congress, and considers as being an Egyptian account of the Exodus.

## A Nef Fragment of the Babylonian Deluge Story.

The following is the translation by R. P. Scheil, of the tablet an account of which he gave to the Oriental Congress. It is taken from his account in the Revue-Biblique. The date of the tablet is about b.c. 2140 in the reign of Ammizadouga, and the scribe's name was Mullil-Aya or Ellit-Aya :-
qu’il extermine qu'il anéantisse . . . .
qu'à l'aurore, il fasse pleuvoir la mort
qu'il prolonge, la nuit encore . . . .
qu'il fasse pleuvoir P'inondation
il fera monstrueuse la ruine des champs, la ville . .
ce qu Ramman a accompli dans la ville
It dit et bouleversa (?) la contrée
Il poussa un cri
Mais il ne craignirent pas . . .
Ea (?) prit la parole et me dit :
pourquoi veux-tu tuer les hommes . . . .
je tendrai ma main à l'homme
le deluge dont tu parles . . . .
quel qu'il soit je
ceux que j'enfante
il sera averti
afin qu’il le sauve
et il fabriquera
et il enfantera
qu'ils viennent dans (un vaisseau)
que Pir napistim prenne la rame . . .
qu'il vienne
qu'il mene . . .
. . . . . le parfait
. . . . . il fit aux hommes
Adramhasis prit la parole
et dit à son seigneur.
Tablette deuxième de l'histoire. Pendant que l'homme reposait. Tablette de 439 lines. Ellit Aya scribe élève. Mois de Selat jour 28 année où Àmmizaduga roi, le fort Ammizadugaki à l'embouchure de l'Euphrate construisit.

The following is Professsor Naville's translation of the portion of the long inscription of Menepthah discovered by Dr. Petrie, which relates to the Israelites. It was read by M. Naville to the Oriental Congress, and has now been published by him, with long cxplanatory remarks, in the Recueil de Trazaux:-
"Kheta est en paix, Kanaan est prisonnier de tous les maux ; [car] Askalon est amené, pris par Ghezer [et] Iamnia n'existe plus; Israël est anćanti, il n'a plus de postérité. La Syrie est comme les veures d'Égypte, tous les pays sans exception sont en paix, car quiconque remuait a été châtic par le roi Ménephtah."
M. Naville shows that Kheta and Kanaan are the names of districts north and south of Palestine, whereas Askalon, Ghezer and Jamnia (in the text Inu amam or Inu amma) are those of cities. Strabo, bk. 16, ch. II, 23, mentions Jamnia, Ghezer, Ashdod, and Askelon, as being contiguous. The statement of the inscription regarding the cities is, not that the Egyptians had conquered them, but that, as in the period of the Tel el Amarna tablets, they, by internecine strife, had ruined themselves. Had it been the result of Egyptian victories, it would have been duly vaunted in the text.
M. Naville considers the statement regarding the Israelites relates to the time when they were traversing the wilderness, when, for the poetical style of the scribe, they were annihilated; they having disappeared into the desert. The fact that they left no posterity behind confirms the Jewish account of how the Exodus included every member of their race, even to the youngest.

Yours faithfully,
Jos. Offord.

The next Meeting of the Society will be held at 37, Great Russell Street, Bloomsbury, W.C., on Tuesday, ist February, 1898, at 8 p.m., when the following Paper will be read :-

Joseph Offord: "Roman Inscriptions relating to Hadrian's Jewish War."

## SOCIETY OF BIBLICAL ARCHEOLOGY PUBLICATIONS.

In 8 Parts. Price 5s. each. The Fourth Part having been issued, the Price is now Raised to $£ 5$ for the 8 Parts. Parts cannot be sold separately.

## The Egyptian Book of the Dead.

Complete Translation, Commentary, and Notes.
By the late SIR P. LE PAGE RENOUF, Knt. (President);

CONTAINING ALSO

## The Bronze Ornaments of the Palace Gates from Balawat.

[Shalmaneser II, b.C. 859-825.]

Parts I, II, III, and IV have now been issued to Subscribers.
In accordance with the terms of the original prospectus the price for each part is now raised to $£ \mathrm{I}$ Ios. ; to Members of the Society (the original price) $£ \mathrm{I}$ is.

Price 7s. 6d. Only a. Limited Number of Copies have been Printed.

## THE PALESTINIAN SYRIAC VERSION OF THE HOLY SCRIPTURES.

Four Recently Discovered Portions (together with verses from the Psalms and the Gospel of St. Luke). Edited, in Photographic Facsimile, from a Unique MS. in the British Museum, with a Transcription, Translation, Introduction, Vocabulary, and Notes, by

REV. G. MARGOLIOUTH, M.A.,
Assistant in the Defariment of Oricntal Printiad Eooks and MSS. in the British Museum: formerly Tyruthitt helrew Scholar.

## PROCEEDINGS

## THE SOCIETY

OF

## BIBLICAL ARCHEOLOGY.

TWENTY-EIGHTH SESSION, 1898.

Second Mieting, ist February, isgS.
Rev. James Marshall, M.A., Menter of Council, IN THE CHAIK.

The following Presents were announced, and thanks ordered to be returned to the Donors:-

From the Author, Rev. Dr. Albert Löwy :-The Measure of our
Days. A tri-lingual song, dedicated to his friends on the occasion of his Eightieth Birthday. (1)ecember 8th, 18c, 6.) Svo. London. 1897.

From the Author, F. Ll. Griffith :-Wills in Ancient Egypt. London. 8vo. i898. Lazu Quarterly Reviez, Jan., i898.

From the Author, Professor G. Maspero:-Nouvelles Fouilles d’Abydos. (1896-1897.) Svo. Paris. 1898 . Rezue Critique, Déc., 1897.

From the Author, Rev. C. de Cara, S. J.:-Gli Hethei-pelasgi in Italia, (il' Italici nella paletnologia Italiana. Svo. Ciailta Cattolica, Jan., i Sos.

From the Editor, Dr. Paul Haupt:-Prospectus, with Specimen, Illustrations, Notes, etc., of the Polychrome Bible, being the Sacred Books of the Old and New Testaments ; a new English Translation, printed in colours, exhibiting the composite structure of the Books. New York. Svo.

From the Editor:-Orientalislische Litteratur-Zeitung, Herausgegeben von F. E. Peiser. Berlin. fto. i. Jahrgang, No. i. ${ }^{1} 5$ Januar, i893.

The foilowing Candidates were submitted for election, having been nominated at the last Mecting, held on the ith January, isgS.

Nils Sioberg, Victoria Muscum, Upsala.
Mrs. Lane, I angstein, Petersfield.
Rev. Joseph Heyes, Beuel bei Bonn, Germany.
Walter Tomlinson, M.A., Ashley Gardens, Victoria Street, Westminster.

Mr. Joseph Offord read a paper entitled, "Roman Inscriptions relating to Hadrian's Jewish War."

Remarks were added by Dr. Gaster, Mr. Hallett, Mr. Gilbert Highton, Rev. Dr. Löwy, and the Chairman.

Thanks were returned for this communication.

# ROMAN INSCRIPTIONS RELITING TO HADRIAN'S JEWISH WAR. 

By Joseph Offord.

Some serenteen years ago M. Arsène Darmesteter* illustrated how much light Roman and (ireek inscriptions throw upon the history of Palestine in the early centuries of our era. A considerable portion of his monograph was deroted to showing how serious a menace the revolt of Bar Cochba was to the Roman power: and by means of epigraphic materials he proved to use his own words, that to suppress this insurrection Hadrian employed " at liast" three legions, the III Gallica, IIT Cyrenaica, and IV Sythica, a cohort, the IV Lingons, a vexillatio of the I Gemina, and a part of the Syrian fleet. $\dagger$ These troops, he assumes, amounted, omitting the fleet, to approximately 22,000 to 23,000 men.

He proved the presence in the campaign of the III Gallica by the inscription of T . Camuleius ; that of the III Cyrenaica by an inscription of its centurion, Caius Popilius Carus Pedo ; that of the IV Lingonum by that of a prefect, A. M. Statius; that of, probably, a resillatio of the $X$ Gemina by the inscription of Sextus Attius Senecio, on of its tribunes; and that of the Syrian fleet by an Algerian text relating to a prefect serving on it, A. Sextus Cornelius Dexter.** He considered the fact of the IV Sythica taking part in the war as evidenced by the Ancyra inscription of Tiberius Severus. $\dagger \dagger$

[^9]The text of Sextus Senecio might be interpreted as meaning that he, though its tribune, commanded a rexillatio not of the X Gemina but a detachment of some other troops. If it was a part of his own legion, they hurried to the conflict from near Vienna, as mentioned by M. Darmesteter, but, as will presently be seen, this was not an unparalleled step in the conduct of this campaisn. Since M. barmesteter published his researches a number of newhy-found inscriptions have comoborated his conclusions, and more especially recently a military diploma has been presented to the Louvre, and cescribed by II. Heron de Villefosse, which throws an amount of new historical information upon the subject, confirming and intensifying M. Hamesteter's statements in a remarkable manner.

It is now therefore opportune to again sum up the eprigraphic evilence relating to Bar Cochba's revolt and its suppression. Dealing primarily with corps mentioned by M. Darmesteter, and turning first to references to the Legion III Cyrenaica, we now know, from an inscription of the time of Iomitian found at Coptos Ly Petrie, it was in Egypt in A.1 90, ${ }^{*}$ but an inscription found at the south gite of Jerusalem shows a rexillatio of the legion was in Judea under Trajan. The text extended is as follows-

IOVI . O. M : SARAPIII . PRO . SALNTE . ET . VICTORIA . IMPERATOR • NERVAE . TRAIAN . CAESARIS . OPTVMM . AVGVST . GERMANICI .
DACICI P PARTHICI . ET • POPVLI . ROMAN゙I . VENILLATIO. LEGEONIS III CYRENAICAE F FECIT . $\dagger$

From this it follows that a vexillatio of the legion was at the city before A.b. is 6 , because the inseription gives Parthici as a title of Trajan, it therefore also was at, or near, Jerusalem previous to the rebuilding of the city by Hadrian. It would appear thus that the legion was employed in the Bar Corhba campaign because it was in cantomments in Palestine, and it is not one of the corps sent from othe parts of the empire specially to suppress the revolt. + .

Though no further cormborative text has been found, a perusal

[^10]of the inscripuion of A. M. Statius shows conclusively that soldiers of the IV Lingons were at this war.* An inscription recently disinterred at Wallsend, however, may throw some light upon the subject. It runs thus: "Jovi Optimo Masimo cohort IIII Lingonum equitata." $\dagger$ This station of Wallsend is on the line of Hadrians wall. Now we know from Dion Cassius, that an officer named Severus was selected by Hadrian to conduct the Jewish campaign, though Dion confuses him with one Tiberius Severus, a governor of Syria and legate of the IV Sythica legion. But the great cursus honorum of Julius Severus, governor of Britain, proves it was he who was the general, and hence it is extremely proballe that with him as escort from Britain came the cohort of the IV Lingons in whic? Statius served. By a military diploma found at Chester we know the IV Lingons (or part of them) were on the wall at the time of Antoninus Pius about A.D. 146.5

Of the III Gallica I have been umable to find any confirmatory text. In A.D. 199 a detachment entilled V'cterana Gallica was at Alexandria, see Eg. Ex. Fund, Tamis, nol. II, p. $9^{8}$.

It is strange that Mi . Darmesteter did not include among the forces employed under the command of Julius Severus the $\mathcal{X}$ Legion Fretensis, because in the inscription of A. C. P. Carus Pedo, centurion of the III Cyrenaica, the X Fretensis is mentioned. Moreover, there was abundant evidence proving that this lexion was in Judea from the time of Titus to that of (iordian IIl. $\|$ Under Caracalla and Elagabalus it, in honor of these emperors, assumed the additional designation of Antonianiana, whilst as memorial of its

* The portion of the inscription of A. M. Statius relating directly to his presence in Palestine is a, follows: " Marco statio Marci filio, praefecto cohoris IIII Lingonum vexillo militari donato a divo Hadriano in expeclitione judaica."
$\dagger$ Rezue Archíolugique, 1892. vol. 2, p. 401.
$\ddagger$ Darmesteter, Rĩue des Etudes Juitees, 18So, p. 42.
\& The I and II Lingones were also at times in Britain. Altrough Tacitus tells us Otho "Lingonibus universis civitatem romanam dedit," I letieve no text adding "civium Romanorum" has been found of these troop;.
$\|$ That the X Fretensis was in the Jewish campaign of Titus. apart from the statement of Jnsef hus, is settled by an inscription (guoted here because not cited by M. Darmesteter) of $A$. Larcius Lepidus:

LEGatus X FRETENS donato DONIS MLITARIBus aB . IMP . VESPASIANO caesare Augusto et t . Cabsare avg . f . bello ivdalco corona mirall de.

See L. K nier, Aémoines de litad. des Inscriptions, 1867, p. 269.
fidelity to Gordian in the struggle between him and Maximian it had bestowed upon it the new title of Cordiana.*

In 1891 a text was found at the Jaffa sate of Jerusalem as follows-
M.IRCI INIO MASIMO AVGVSTI LEG.ITO LEOEO X FRETENSIST

In 1.995 M . Gemmer Durand found a milestone near Jericho with a mutiated inscription which, by means of the faffagate text, he restores to a very smilar form. ${ }^{+}$A text bearing the letters L. X . F (legio I fretensis) has been found on the Mount of Olives, and a mosaic at Jerusalem itself has bricks stamped $\mathrm{L}, \mathrm{X}, \mathrm{F}$.. $\|$ but we have positive epigraphie proof of this legion taking part in the campaign, as the following inscriptions bhow. $\frac{1 T}{}$

In estimating the total number of troops to be added to the sum given by M. Darmesteter, doubtless the total strength of the X Fretensis legion should be included. This may be disputed, because Mommsen has proved that after Vespasian there was some official connection between the African and Syrian armies, and inscriptions have been found in Africa relating to soldiers belonging to legions serving in Syria. For instance, a detachment of the VI Ferrata whose quarters, after Hadrian's reign, were in Syria, were at Mount Aures in Numidia, $\dagger$ and a soldier of the III Cyrenaica was buried at Mila in Algeria. ${ }_{+}^{+}$These apparently are only sporadic instances. It is not thus, however, with the Syrian legion, the III Gallica, for it seems to have regularly given reinforcements to the III Augusta, an African legion. Certainly inscriptions definitely assert this. At Lambesia one reads, " Miles legiones LII Augusta ex III Gallica." $\$$ Another speaks of a soldier as "contributus ex legione III Gallica in legionem tertiam Augustam." |l Another is as follows-

```
C IVLIVS VALENS . VETERANVS NATIONE SVRVS .
PROBATVS IN III GALLICA M1SSI'S DE LEGIGNE
III AVGVSTA.%
```

Lastly this may be quoted-
LEG . III AVG. SEVERIAE TRANSLATVS EX LEG. III GALLIC.**
There is one text found in Italy, and in iS95 presented to the Museum, at Diocletian's Baths, which does apparently associate the A Fretensis with Africa. It reads as follows: "Publilio Lucii filio Fabia (or Falerna) Memoriali praefecto fabrum praefecto cohortis tertiae Cyrenaicae saggiftariorum tribuna militum legionis decimae Fretensis praefecto gentes Numidarum dilietatori tironum ex Numidia

[^11]lectorum legionum Augustae in Africa item $\qquad$ item . . . . Ferratie."

It may be argued that the career of Publilius here set forth was an African one, and his services under the eagle of the X Fretensis must therefore have been with a vexilla of that corps in Africa.

But it is more reasonable to explain his history in accordance with Mommsen's view, and to look upon his career in the X Fretensis in syria as being, because of the official linking of the two armies, ats a natural stepping-stone to an appointment in Africa. It is true he was surveyor for the levies for the VI Ferrata, an Asiatic legion, as well as the African III Augusta, but upon the Roman principle of sending legionaries to serve in countries other than those of the ir enrollment ; and again bearing in mind Nommsen's dictum, there is no reason to think that any considerable body of the VI Ferrata was in Africa.

As final epigraphic evidence concerning the X Fretensis, the following text from Samaria, which may be dated approximately 160 A.D., and therefore subsequent to Bar Cochba's defeat, may be cited.*

```
I\P. CAES . TRAIANO H.ADRIANO AVG. P.ITRI
P.ITRIAE LEGIO S FRETEMSIS COHORS 1.
```

The text gisen by M. Darmesteter relating to the X Gemina runs as follows: "Sextus Attius Senecio praefectus alae i flariae (iaetulorum, tribunus legionis X Geminae, emissus a divi Hadriano in expeditione Judaica ad vexillationes deducendus in . . . . " $\dagger$

This does not definitely prove that the detachment was from the Gemina legion, which was just before on the Danube, but another monument of Hadrian's reign shows us three vexillationes millaria, viz. of 1,000 men, of three separate legions employed in the British war: these were from the VII Gemina in Spain, the VIlI Augusta and XXIt Primigenia, hoth in Upper Germany. We know that in the Judaic war of 85-6 A.D., one cohort of the Augustan Pretorian Lusitanians came from Central Europe to Palestine.

That for this very campaign troops were fetched from Central Europe is, morcover, proved by a recent discovery beyond a doubt.

[^12]In 1894, M. Clermont Ganneau described a new text found at Bether, the modern Bettir, the focus of Bar Cochba's rebellion, and site of its fall.* The inscription consists of only five or six lines but it mentions the names of two centurions commanding detachments of the V Macedomian and XI† Clandian legions. These troops nust have been drafted from the quarters of these two legions, which were at this time situated in camps far away upon the banks of the Danube. After being brought to Palestine because of the serious nature of the revolt, and assisting in Bar Cochba's defeat,

* Bettir is still called by the Arabs "Khurbet el Sahoud."
$\dagger$ A military diploma, found at Slatina in 1892, mentions the XI Claudia th taking part in the Dacian war: see Reate Arthetoritue, vol. N.. p. 375. The following testimony from Braila on the Danube nay be cited: "D. M. Valerio Thiumpo qui militant Leg(io) XI Claudio lectus in saero comitatu lanciarius," de.

With regard to the station from which the I Macedunica was fetched, the following inscription from Troesmis in the Dolrudscha is sufficient: "Pru salute Imperatoris Caesaris Traiani Hadrimi Augusti: Gaio Valerio Pudente veterano legionis quintae Macedonicae, et Marco Ulpio Leontio magistris canabensium et Tucco Aelio aedilibus dono dederunt veterani et cuves Komani consistentes ad camabas, legionis fuintae Macelonicae."

That lower Moesia was practically the legion's home, to which it therefore returned (after serving in Palestine) before A.1). J61, is indicated loy this text. "Pro salute Imperatorum Anfonini et Veri Augustorum Iegiones V Macedonicae, Iallii Bassi legati Augu-torum propractore Martii Veri legati Augustorum," ice., \&c. (This Iallius Bassus was, or later became, a Christian, for De Ronsi, Romat Sotterana, quotes this inseription: "Ialliae, Jullii Bassi et Catiae Clementinae filiae, piissimae matri Clementinae in pace. Aelius Clemens filius. Viventio Duleissimo.")

The legion was still in Moesia when the supplemental information was added to our text of the Antonine Itinary, but under Septimus Severus it was in Dacia about A.D. 19I. Its career to this date is mentioned because a most interesting epigraphie coincilence with these historical data concerning the Roman troops in Palestine in 134 to $\mathbf{1 4 0}$ A.D., is afforded by a text of a centurion named Claudius. He died aged 56, whilst on the rale of the V Macedonica when it was stationed at Troesmis, therefore previous (probally long previons) to A.1). I91.

The inscription is as follows: "Tilerins Claudius, Tiferii filius, (uirina, Ulpianus, domo Laodiceae Syriae, centurio legionis decimae Geminae, et quartae Flaviae, et duodecimae Fulminatae, et tertiae Cyrenaicae et decimae Fretensis et secundae Adiutrecis, et quintae Macfdonicae. Vixit annis quinquaginta sex. Heres secundus faciendum curavit." It will be seen that, though a native of Syria, his career commenced in three legions we know were on the Upper Danube. He then went to Cappadocia to the Fulminata legion, and thence for some military necessity, which can now easily be surmised, he served in Syria or Palestine, in the IHI Cyrenaicia and X Fretensis. Finally returning to Europe to the eagles of the Adiutrix in Pannonia and the V Macedonica in Moesia : a'tite L. Renier, "Inscriptions de Troesmis," Revue Archíolorique, 1863, p. 424.
they remained in garrison at Bether, for as pointed out by M. Clermont Gumeau it is a post of great strategic importance, as it commands the road from Jerusalem to the Mediter ranean.* He a's, in his monograph, associated with this inscription another reiating to a soldier of the Nacedonian legion, who with his comrades was stationed at Emmaus (Nicopolis) ; this garrison also being supplied for a strategic reason and acting as duplicate in military ralue to the force at Bether, Emmaus dominating the route from Jerusalem to Jaffa. $\dagger$

Considerable as is the information concerning the military resources called upon by Trajan for this Jewish war, which has 1.en gathered from a variety of inseriptions as mentioned at the wemmencement of this summary, it altogether falls short of the immense anount of new evidence condensed into one single inseription recently found in the Hauran. \& This is a military diploma of one ( a itus of the II Galatian cohort, who obtained his discharge in A.D. I39 under P. Calpurnius Atilianus, a successor of Julius severus. 'This text, as will be seen, gives, to be added to the Roman army list, the names of three cavalry wings and no less than twelve coburts, not one corps among the list being either the same as those chumerated by MM. Darmesteter or Clermont Ganneau.
H. Heron de Villefosse, who published this diploma, also notes that he believes that nine of the names for the various bodies of troops are new.
"Imperator Caesar divi Hadriani filius, divi Traiani Parthici nepos divi Nervae pronepos, Titus Aelius Hadrianus Antoninus Augustus Pius, pontifex maximus, tribunicia potestate II consul II designatus III pater patriae.
" Equitibus et peditibus qui militaverunt in alis III et cohortibus XII quae appellantur Gallorum et Thracum, et Antoniniana Gallorum et VII Phrygum, et I Thracim Miliaria et I Sebastenorum Miliaria et I Damascenorum et I Afontanorum et I Flavia Civium

[^13]Romanorum et I et II Galatarum et III et IIII Bracarum* et IIII et VI Petraeorum广 et V Gemina civium Romanorum, et sunt in Syria Palaestina sub Calpurnio Atiliano, quinque et viginti stipendiis emeritis dimissis honesta missione, quorum nomina subscripta sunt, ipsis liberis posterisque eorum civitatem dedit et conulium cum uxoribus quas tunc habuissent cum est civitas iis data, aut, si qui caelibes, cum iis quas postea duxissent dumtaxat singuli singulas. a. d x. k dec., Marco Ceccio Justino, Gaio Julio Basso consulibus cohortis II Ulpiae Galatarum cui praest Quintus Flavius, Quinti filius, Palatina tribu, Amatianus, Capua, ex pedite Gaio, Luccii filio Nicia."

Of the cavalry or cohorts enumerated in this document whose titles were previously known, M. Heron de Villefosse mentions that the VII Phrygum is spoken of in Corpus Ins. Lat., vol. II, No. r8j8, and the I Thracum Miliaria in Corpus Ins. Grace, No. 3 I 32. A I Thracum Victrix and a I Thracum Civium Romanorum were in Pannonia under Antoninus Pius $\$$ one of these may be identical with the I Thracum of a Dacian diploma of A.D. S6, whose inscription is connected with the Judean armys and which M. Villefosse suggests is the same as the I Thracum Miliaria.||

A Prefectus of the I lamascenorum is recorded in Egypt in A.d. i35, and a Miliaria I Flavia Damascenorum was on the Rlienish Roman wall in 86 A.d. M. de Villefosse expands br into Bracarum, and tells us that in A.D. 166 it was in Rhetia. But if this is the same corps as that M. de Ceulener, in his work upon a diploma of Trajan,*** expands into Bracaraugustenorum, it was in Britain about A.D. $103 . \dagger \dagger$ A (ini) brac(arum) is recorded in the Cilurnum (Chesters) diploma of Antoninus Pius, so that about $1 \not{ }^{4} 6 \mathrm{~A} . \mathrm{D}$. these troops were again in Britain. $i_{\ddagger}^{\dagger}$ It has already been mentioned that the IV Lingons were among the Brtish garrison soon after the Judean campaign, and it would seem as if the III Bracarum

[^14]was also connected with the army of Britain, from whose command Juhius Severus came to Palestine for the war:
II. de Villefosse enlarges the title of the two cohorts mand vi PETR into "Petraeorum," probally his erudition affording him good canse for so doing, but it is interesting to note that a cavalry corps alde petr, which has hithert. been expanded into "Petriana," is well known in British inscriptions. Its full title, if correctly amplified from the Stamington diploma,* is Ala Augusta Petriana Torquata Miliaria Civium Romanorum, and upon the Hexham stone simply ". alae petk." These texts were enlarged to l'etriana with the idea that the Ala's name was derived from the Roman wall station of l'etriana near Birdoswald. If these "peTr" cohorts should be read Petriana they may also be from Britain.
M. Héron de Villefosse says the 1 Montanorum were in Pannonia both before and after this Jewish war, and that the IV liracarum were already known from a text as follows: pratef. cohort inil eracartain ivoabi.i Of the cohort i. seb. miliaria no other record is known, but an Ala, the "Seba-tenae Severianae," is mentioned in an inscription at Cherchell, $;$ and these Sebasteni horsemen are found recorled in other Mauretanian texts.

Although this enumeration of the Roman legionaries and auxiliaries employed in the suppression of this Jewish revolt has doubtless been very imperfectly performed, yet enough evidence has been obtained to indicate that M. Darmesteter very much underestimated the total of the forces which were finally employed. The number must have been nearer 50,000 than 25.000 men, if not considerably more. Indeed, it is a little strange that he should have assumed the smaller number sufficient to crush a rebellion having attained the dangerous propertions Dion Cassius informs us this one had done. It is to be hoper] that evidence from inscriptions that have cosaped notice in this paper may be adduced by readers thereof to further elucidate the matter.

If, as seems possible, there is any validity in the suggestion that many of the reinforcements accompanying the British commander Severus, were portions of corps usually guartered in Britain, or consisted of troops from the continental recruiting bases which, in

[^15]the ordinary course, would have been sent to join their comrades in military cantonments in Britain, it is an interesting fact upon which more information would be welcome.*

* Dr. R. Blair, of Shields, has lindly given me the following references for British troops alluded to. Lapidarun Septen, Ala Petriana, p. 7, and Nos. $\mathrm{t}_{2}$ and 794; Coh. I Lingonum, p. 5, Nos. 686, 699 and 700 : II Lingonum, pp. 5, 7, and No. 91I; IIII Lingonum, p. 4, and No. i. In Corpus lins. Lut., vol. VII, Coh. III Bracaraugustanoram, Nos. 1193 and 1195 : I Lingons, Nos. 32, 433, 445, 446, 450, 1041, 1197: Il Lingons, Nos. 208, 209, 359, ili95; III Lingons, Nos. 493-1193; Ala Petriama. Nos. 323, 872, 929 and 1195.

The important portions of the cursus honorum of Severns are as follows:-
"Sex Vinicio Faustino Julio Sergio Severo lesato pro practore provinciae Brittaniae legato propraetore provinciae Judeae iegato pro pretore prosincase Suriae. Huic Senatus auctore imperatore Trajano Hadriano Aug. onamenta triumphalia decrevit ob re: in Judea prospere gestas decurionum decreto."

The remainder of thi, text, and the many others quoted by M. Darmestect, should be referred to for full particulars of this war.

# Abraham and the land of His Nativity. 

By Hormuzd Rass.m.

Rectd, 1st Junc, 1 S97.
There bave been from time to time conflicting opinions and theories, both ancient and modern, regarding the historical site of "Ur of the Chaldees," the supposed birth-place of Abraham, especially since the discovery of some cunciform inscriptions in thie ruins of Moggayir, at the extreme end of Southern Mesopotomia, wherein, it is alleged. the name of Cr occurs, and which a number of Assyrian scholars construed into that celebrated ancient site, mentioned in the elerenth chapter of Genesis, that I have taken upon myself the task of contesting its existence anywhere in that region. The world knows nothing of Abraham except what can be gathered of his history from the Bible, and it is therefore necessary to go to that Book for any authentic information about him and his fatherland.

In quoting different passages from Holy Writ in support of my argument, I bey to point out, in the first place, that I do not do so on religious grouncl, as my purpose is simply to show the historical aspect of the 'fuestion in dispute, and not to prove my contention from a theorogical standpoint. Secondly, as I am not an Assyrian scholar, and incompetent, therefore, to decide how certain signs and figures in the arrow-headed writing ought to be read and pronounced, I must mot touch upon their interpretation, as I might fall into a woeful dilemma, and incur the odium of being too inquisitive. But I want to touch briefly upon the danger of trusting to theorics regarding the meaning of Semitic words in use even at the present day among the Arahs, Chaldeans, and Syrians.

There are perhaps more than five bundred millions of Christians, Moslems, and Jews, who only know of the existence of Abraham from the Bille. and we ought therefore to be guided by what is recorded therein of him and the land of his nativity, and let that history speak for itself.

In Genesis (xi, 3I), where we first learn of Abraham's country, it is said: "And Terah took Abram his son, and Lot the son of Haran his son's son, and Sarai his danghter-in-law, his son Abram's wife; and they went forth with them from Ur of the Chaldees, to go into the land of Canaan; and they came unto Haran, and dwelt there." In the first verse of the following chapter it is related: "Now the Lord had said unto Abram, Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will shew thee." We must assume, therefore, that Haran was the country of Abraham, the same as any Englishman, being destined to change his abode to France from London and moves in the first place to Dover, could safely assert that the latter place was part and parcel of his country. In the fifth verse it is recorded that: "Abram took Sarai his wife, and Lot his brother's son, and all their substance that they had gathered, and the souls that they had gotten in Haran ; and they went forth to go into the land of Canaan ; and into the land of Canaan they came." Tlen in the ninth verse of the same chapter it is said: "And Abram journeyed. going on still toward the south." Now no one can doubt that Haran is situated in Northern Mesopotamia, about 450 miles above Babylon, and not less than 600 from Moggayir. How is it then when Abraham was commanded to go to Canaan, which is about 550 miles to the west, that Terah, with all his great retinue, should go nearly too miles out of his way for Abraham to reach the promised land, which was to the south-west? It has been urged by different writers upon the subject of Abraham's emigration that the route was chosen for convenience; but those who adrocate this theory are not aware that to take that course from the situation of Moggayir is anything but the right one, if they had examined the country properly between the latter place and the Holy Land. Abraham could have easily marched straight to Palestine from Moggayir through a country which has neither hills nor rivers to impede his passage, the same as the nomad Arabs move from place to place at the present day with all their substance. I have no doubt that the four confederate kings who invaded Sodom and carried Lot captive, whom Abraham afterwards rescued, had followed the same track from Southern Mesopotamia. Those who dispute the position of Padan-aram as being the native country of Abraham, ought, I think, to show in the first instance a good reason for the object of Terah going such a distance out of his way to
sojourn at Haran, if it had not been a city with which he had a previous acquaintance from ths proximity to Ur of the Chaldees. Morcover, I do not know why Terah should choose Haran as his future home from such a distance as Moggayir, where he would be looked upon as a stranger. But as I believe that Terah went from a place which must have been somewhere at or near the present city of Orfa, in Northern Mesopotamia, known to the Hebrews as Aram-Naharam, it was not extraondinary that Abraham should call Haran his country when loe sent his servant Eliezer thither to fetch a wife for his son Isaac. All references made in the Bible about Abraham point to his country as being in AramNaharaim, and this name must not be confounded with the Greek appellation of Mesopotamia, as the former applices only, according to the Hebrew geographical positions, to that part of Northern Mesopotamia which embraces the province of Orfa, the ancient Eldesa; whereas the latter is a Greck word which takes in the whole valley of the Euphrates and Tigris from Diarbekir to the junction of the two rivers, two hundred mules below Babylon. The mistake began by the authors of the Septuagint, as the first mention of Aram-Naharaim was in the 2.4 th chapter of Genesis, when, as I said before, Abraham sent Eliezer thither on an errand to his relatives at Haran, and said to him: "But thou shalt go unto my country, and to my kindred, and take a wife unts my son Isaac." Aram-Naharaim was also the country of Balaam ; * and we find that it had a king in those days named Chushanishathaim, mentioned in Judges. $\dagger$ Surcly no one can ever imagine that this AramNaharaim was in Southern Babylonia, near the Persian Gulf? We find also that Joshua in speaking to the tribes of Israel, + he told them that their forefathers "dwelt on the other side of the flood in wh time, even Terah, the father of Abraham, and the father of Nachor." This allusion also points to that part of the Euphrates in the northern part of Mesopotamia, which is verified by what Moses said in Deuteronomy of Jacob's nationality as an Aramee.s This in my opinion proves more than anything else that Abraham's family came from the neighbourhood of Ilaran, at the upper pait of the Euphrates, and not the lower: and it is remarkable that both Balam || and losea $\mathbb{T}$ mention that part of Mesopotamia merely as

[^16]תר Aram, though in the authorized English version of the Old Testament the former is rendered Aram, and the latter Syria: but in the revised version both are called Aram. Why the Greeks corrupted the Semitic word Aram into Syria, and Aramaic into Syriac is a mystery.

There were formerly no less than five Arams existing on the east and west of the Euphrates, namely, Aram of Damascus (kingdom of the so-called Syria) : Aram-Naharaim (Northern Nlesopotamia, between the Euphrates and the Khahoor, or Chebar river) ; Arampadan (which means arable land, where Terah and his family lived): Aram-Zobah (Province of Aleppo) ; and Aram-Rehob, the district of Hamath, loordering on the Mediterranean as far as Latakia. It may be that as the (ireeks corrupted the word Assyrian into Syrian, thus confounding different nationalities with this misnomer, which has no connevion whatever with the original, either in sound or etymology. It is a pity the revisers of the Old Testament did not correct all the words into Aram which were erroneously translated formerly into Syria, as they did in some cases already alluded to above.

Orfa, where the dreadful massacres took place among the Armenians some time ago, is beliered by all learned Jews, Mohammedans, and Christians of that country to have been the "Ur of the Chaldees" mentioned in Scripture. Deing so near Haran, and commanding an important position in that part of Mesonotamia, it was most probably, in olden times, as it is now, the capital of Padan-Aram. It might have been called then Oor, as it is in the original Hebrew and Aramaic. It is very striking that in the ancient Padan-Aram we have at the present day three positions near each other in Aram-Naharain that are called by three biblical names, which are Orfa, Haran, and Serug, styled in Arabic Serooj, the hard $g$ having changed into $j$, as there is no letter as the former in Arabic. The difficulty has arisen from the supposed nonexistence of such a country as Chaldea in Northern Nesopotamia ; as it had been taken for granted that such a realm was only in a small part in Southern Mesopotamia, between Babylon and the Persian Gulf! But if we refer to Grecian history we shall find that the Chaldeans were mentioned inbabiting different parts of the range of mountains between the Mediterranean and Persia. Moreover, Ur of the Chaldees does not necessarily mean Ur in Chaldea, but it may signify the Ur of the Chaldeans, like we may now style

Algeria as of France, though it is in Africa and not in Europe, or Aden of the English though it is in Arabia and not in England. The words "Ur of the Chaldees" show, however, that there were other Urss existing at the time in Biblical lands, like Bethlehem of Judah, and Bethlehem of Zebalon; and Cush * (Ethopia) of Asia Minor, and Cush $\dagger$ of Africa. It is very interesting to note that in the Chatdee or Aramaic language Jerusalem is called $\mathbf{P} \mathbf{\Phi} \mathbf{0} 2$,
 Oor, d'Chaldaye, or Oor of the Chaldees. We find also that that northern part of Mesopotamia called by the Hebrews AramNuharaim, is styled by the Prophet Ezekiel as the land of the Chaldeans, $\ddagger$ as the river Chebar (in Arabic Khaboor) is one of the rivers which surround Padan-Aram mentioned above. St. Stephen also mentions, in Acts vii, 4 , that Abraham came out of the "land of the Chaldeans" when he was in Aram-Naharaim. There could have been no better word applied to that country as the Arable Aram, from the richness of its soil and extent of its cereal production. Its annual export of corn to Europe, even now, when a small part of the land is cultivated, is very great. As for the position of the town of Orfa, it is one of the most picturesque in Mesopotamia ; and had it a better and more energetic Government, its province might have vied in beauty and importance with the most flourishing regions in the world. The town is situated on an eminence, with a large number of rivulets running in all directions, and commanding extensive ferile phains stretching far and wide. Its produce of fruit and cereals might prove a source of incalculable riches, especially if railway communication could be established between the Mediterranean and the Persian Gulf, through the Euphrates and Tigris Valley. A large extent of land in front of the town is studded with private and public gardens; and within the city itsclf there are a large number of well to do families, who have their houses surrounded with arbours and orchards.

I think it will not be uninteresting to quote some passages from different writers, both ancient and modern, regarding the Ur of the Chaldees mentioned in Scripture, and leave it to painstaking critics to draw their conclusion therefrom. I must begin first with the ancient historians, who are supposed to claim a better authority

[^17]than modern scholars and travellers, they having lived nearer the time of Biblical sages.

Eupolemus says, that in the "tenth generation [after the Flood], in the city of Babylonia, called Camarina (which, by some, is called the city Urie, and which signifies a city of the Chaldeans), there lived, the thirteenth in descent (a man named), Abraham, a man of a noble race and superior to all others in wisdom. Of him they relate that he was the inventor of astrology and the Chaldean magic, and that on account of his eminent piety he was esteemed by (iod. It is further said that, under the directions of God, he removed and lived in Phcenicia, and there taught the Phenicians the motions of the sun and moon, and all other thines; for which reason he was held in great reverence by their king." **

Nicolas of Damascus says thus of Abraham: "Abram was kins of Damascus, and came thither as a stranger, with an army, from that part of the country which is situated above Babylon of the Chaldeans. But after a short time he again emigrated from this region with his people, and transferred his dwelling to the 'rad which was at that time called Canaaea, but is now called Judea; together with all the multitude which had increased with him, of whose history I shall give an account in another book. The name of Abram is well known even to this day in Damascus, and a village is pointed out which is still called the House of Abraham." $\dagger$

This writer makes the emigration of Abrabam to have been from above Babylon, and not from below it, where Moggayir is situated: out Justin, on the authority of Trozus Pompeius, makes a more startling statement in regard to the Jews' origin by fixing it at Damascus in Syria, and he goes so far as to allege that even the Assyrian kings and Semiramis had sprung from that Syrian region : *

Jacob Bryant in his "Ancient Msthology" adrocates Southern Babylonia as the land of Abraham's nativity; and as be gives an nteresting account of the different historical theories regarding the whereabouts of the Ur of the Chaldees, I cannot do better than quote what he adduces for and against his contention. He says: ' Before I proceed, it may not be improper to obviate an objection, which may be made to the place, and region, where I have supposed Abraham to have been first conversant ; as there are writers who

[^18]rave imagined Ur of Chaldea to have been in another part of the world. The region in question is by Strabo plainly defined as a province of Babylonia : and Arrian, I'tolemy; Dionysius, Pliny, and Marcellinus all determine its situation so clearly, thought no doubt could have arisen. It appears, however, that Bochart, Grotius, lee Clere, Cellarius, with some others, are dissatisfied with the common opinion, and camnot be persuaded that Abraham came from this country, lochart accordingly tells us that the Ur of the Sir riptures was near Nisibis, in the upper regions of Assyria, and bordered upon Armenia. . . . . . . . . . . This is surely too lightly determined. All that we learn from Marcellinus is, that they passed ly a castle called Ur. Not a word is there mentioned about a region called Chadea, nor of a people styled Chaldeans, which was necessary to be found. Yet the learned writer says, res patet, zoe ; if be assured that here was the birth of the Patriarch: and the urininal place of his residence was near Nisibis. In another part of his work he mentions a place called Ur, near Syria, upon the Euphrates, of whicli notice is taken ly I'liny, and he seems to think i) not improbable that bere might have leen the first abode of Araham. From hence we may perceive that he was not very determinate in his opinion Edessa is said to have heen called Ur and Urhoë, on which account some have been induced to place the birth and residence of the Patriarch here. But who ever heard of Chaldeans in these parts, or of a region named Chaldua?
"If there be anything certain in geography, we may be assured, from a mmbler of the best writers, that the country of which we are treating was in a different part of the world. Chaldea lay to the south of Bahylonia, and was originally hounded to the east and rest by the Thigris and Euphrates, so that it was an interamnian wwion. Hence Joshata tells the chiddren of Israel, in speaking of the first residence of their ancestors, that their futhers dwedt on the wher side of the flood, or river, in shd time, eien Terah, the futher of firathom. And st. stephen, speaking of the call of this Patriarch, suss: The (iod of glony appeard unto our father Aloraham, when he tus in Mesopptamia, before he dowlt in Charran. The land of Chaldea was in those times a portion of the great region called STesnpotamia, and, as I before saicl, it was bounded to the west by the Euphrates, which in its latter course ran nearly parallel with the "Jigris, and empticel itself into the sea below. ....... In this province was the Ur of the Scriptures, called Ur of the Chaldeans,
which was so styled in order to distinguish it from every other place of the same name. It was also expressed Our, Ourhot, Ourchoë, and the people were called Ourchani. It was sometimes compounded Camour, and rendered Camurine, and it is thus mentioned by Eupolemus. The description of Chaldea given by Strabo is very precise. He speaks much in favour of the natives, and says that they inhabited a portion of Babylonia which bordered upon Arabia and the Persic Sea. He describes them as being devoted to philosophy, especially the Borsippeni and the Orcheni. These last we may suppose to have been particularly the inhabitants of the city concerning which we are treating. For here, in the true and of Chaldea, we must look for Ui of the Chaldees. We accordingly find that there was such a place called Urchoë by Ptolemy, by Josephus, Ura, or Ure. By Eusehius it is rendered Ur, and it was undoubtedly the capital city of the province. Add oo this the account given by Eupolemus, who points out plainly the place of the Patriarch's birth and abode.*
"As the history is so plain, why do we go so wide of the mark as to suppose this city to have been upon the confines of Syria ? or, what is more extraordinary, to make it, as some do, an Assyrian city, and to place it high in the north, at the foot of Mount Taurus, apon the borders of Media and Armenia, where the name of Chaldeans is not to be found? Yet to these parts does Grotius, as well as Bochart, refer it, and mentioning Ur of the Chaldees, he adds, the mame remained to the time of Marcellinus. But this learned man is surely wrong in determining so hastily and with such a latitude, for there was no Ur of the Chaldees, nor any Chaldea in these parts. Lucian was born at Samosata, and Marcellinus was thoroughly acquainted with this country, yet neither from them nor from Pliny, Ptolemy, Mela, Solinus, nor from any writer, is there the least hint of any Chaldeans being here..... The place mentioned above was an obscure castle of little consequence, as we may infer, from its never having been taken notice of by any other writer. Grotius says mansit loco nomen, from whence one might be led to imagine that it had existed in the days of Abraham. But there is not the least reason to suppose any such thing. . . . . . . . . .
"There is another question to be asked. As the rout (sic) supposed to be taken from Babylonia and the south towards Haran is objected to, I should be glad to know which way the Patriarch

[^19]should have directed his steps. It is answered, that he ousht to have sone to Canadn diretly westaxart, through Arabia, which would haze been nearly in a strait (sic) line if he had srome from the lozeer regions of Pabskonia, but as he proceded in a ciromit, that comid not be the flace of his deforture. Now, from the best accounts, we may be assured that the rout (sic), which we suppose him to have taken was the true and only way-there was no other by which people could proceel. . . . . . . The very best arcounts prove that this was the ront (su) ever taken by people who went from Babylonia and its provinces to Palastina and Esy]t, for the direct way, as Grotius terms it, and which liochart recommends, could not be pursued. From Babylonia and Chaklea westward was a desert of great extent, which reached to Canan, and still further to the Nile. Nor is there, I believe, upon rerord above one instance of its having cher been traversed.* All ammes and all caravans of merchants were obliged to go to the north of the Euphrates when they came from Babylonia to Esypt, or the reverse when they went from Egypt (1) Bahylonia. Herodotus, when he is speaking of the march of ('ambeses to Egypt, says that the only way into that country was downward fiom the Euphrates, by Syro-Phenicia and Palastine. $\dagger$ The ore is wo other afturent fossare into Eevpt but this. And the rason is phain, for the Arabian desert rendered it impracticable to proceed in a strait (sic) line. l'eople were obliged to go round liy Carchemish upon the Euphrates, and the kings of Babylonia and Egypt fortified that place altemately to secure the passage of the river. When Pharaoh Necho and the king of Babylon wanted to meet in battle, they were obliged to come this way to the ercomnter. The army of Cambyses, and all the armies of the (irecks and Romans, those who served under Cyrus the younger, the army of Alexander, Antiochus, Antonius, 'Trajan, Gordian, Julian, went to the north by the Euphrates, Some of these princes $\therefore$ ct out from Egypt, yet were obliged to take this circuit. It is remakable that Crassus, in his rout (sic) towards Babylonia, went iy (harre, or Harran, which was the very spot where Abraham, in his way from Chaldea to Canaan, resided. It this place the Koman general was met by Surema and slam. Alexander the great went rearly in the same track; for though this was round about,

It is said by ferosus that Nebuchadnezzar, hearing of his father's death, m.... hi way in great haste over this desert.

Hermlutus, L. iii, c. 5.
yet it was by many esteemed the best road to Babylonia. The Emperor Julian also took his rout (sic) by Haran, but from thence went the lower way by Cercusium and the Euphrates. For there were two roads through Mesopotamia to Babylon and Persia, and they both commenced at Charre, or Haran. All these circumstances afford great light to the Mosaïc history, and abundantly witness its truth and precision, even in the most minute particulars. It is therefore a great pity that men of learning are not sufficiently considerate in their determinations. We, from this instance, see that they would set aside a plain and accepted interpretation, on account of a seeming difficulty, to the prejudice of Scripture, which interpretation, upon inquiry, affords a wonderful evidence in its favour, for it appears, upon the strictest examination, that things must hare happened as they are represented."*

It is not difficult to infer that Bryant was fully convinced that the homestead of the family of Terah was in Southern Babylonia, and he tries to prove his argument by quotations from different historians, as if their information were infallible, quite forgetting the main point of Abraham's connexion with Aram-Naharaim in Northern Mesopotamia, which he never alludes to. Most of his arguments are flimsy, especially, as he asserts that there were no Chaldeans beyond Southern Mesopotamia, though he has a note in vol. iii, p. 287, on the word "Casdim" or "Chaldæi," in which he admits that "there was a Chaldea upon the Pontus Euxinus to the east of Sinope, in the country of the Chalybes;" but he adds, "nobody will suppose that Abraham came from honce." Had the writer examined a proper map of Asia Minor, the ancient Cappadocia, he would have found that Aram-Naharaim bordered on that country, and its south eastern limit is within a few miles of the district of Serooj, (the ancient Serug, named after the great grandfather of Abraham), or Padan-Aram. Then with regard to his references to the routes followed in times past by armies and travellers, he makes a woeful mistake by saying that there was no other way from Mesopotamia to Syria and the Holy Land except by Haran, and he goes so far as to ask, "which way the Patriarch should have directed his steps ?" He could not have known that there were, and are, two ways to go from Irack or Babylonia to Palestine: one by Aana, and the other by Dair, both being important towns on the western side of the

[^20]Euphrates: and in the time of Palmyra's prosperous days there was a flourishing trade between the East and the West through the kingdom of Zenobia to Syria. If I were asked by anyone which way to choose to go to Damascus from Mesojotamia, I should say it all depended mon where I was, as that interammian region is more than one thousand moles in length. In going from Mossul or any part of Northern Nesopotamia 1 should proceed either by Orfa or Hair: but if I were at Baglidad, or in any locality in Sonthern Babylonia, the ronte taken would be on the western side of the Euphrates, and enter Syria either quiz Aana or Dair ; hut I should certainly never think of going three hundred miles out of my way to reach Damascus or Aleppo by way of Haran. The very fact of his duoting Herodotus (L. iii, c. 5) about the passage of Cambyses through the Syrion desert, shows that there was a way through that country which Phanes the Halicarnassian recommended. Aloreover, modern travellers have frequented that route zid lalmyra, though since the destruction of that kingdom the comtry has been deserted.

In 1837 the well known General lrancis Rawdon Chesney, the commandant of the " Euphrates Expedition." took the direct desert route from the Persian (Gulf to Damascus, without even following the valley of the Euphrates; and now I hear that Colonel Edward Mockler, lately lolitical Resident at Baghdad, has taken the I'almyra route a'ia Damascus and Beyroot on his way home.

With reference to the allusion Bryant makes about Joshaa:s words to the children of Israel regarding the origin of their forefathers having dwelt "on the other side of the flood in old time," for the purpose of proving that he had meant the lowest part of the Euphrates, is contrary to reason, because all allusions made in the Old 'Testament to a "flood," or "great river." are directed to that part which borders on Aram-Naharaim and Padan-Aram, and with the history of Eliezer's mission to Northern Mesopotamia, and Jacol's matrimonal visit to llaran.

I think I cannot do better than quote the short notices made by three distinguished and experienced travellers and savans, who visited in person the lands I have been referring to,- I mean (;enerull F. R. Chesney, Mr. William Jinswoth the famous geologist, and Mr. J. S. Buckingham, as will be seen from their writings, that they considered Offa (Eddesa) to have been the identical position of the "Ur of the Chaldees." (ieneral Chesney says thus: "To this phace I had looked forward with much interest. Its history as
a royal city, its much earlier connection with Job and Abraham, and its present as well as future importance with regard to trade (of which its position has at all times made it an emporium), naturally gave it great consequence in my eyes. Its appearance, as the traveller approaches, is most picturesque. It occupies the intervening valley, as well as the slopes of two hills, which jut out from the range of neighbouring mountains. On their southern side is the castle, which, as well as the town itself, is defended by high walls flanked by square towers. The city contains 900 Turkish, 800 Armenian, and 200 Syrian houses, all well built: atso numerous baths, and about twenty mosques, one of which is a remarkably handsome building, with two large ponds attached to it full of sacred fish.
"The extensive excavations in the ricinity of the town are supposed to be the remains of ancient Riha or Edessa, and on the adjoining hill are the scattered ruins of a building attributed to Nimrūd." *

Under the head of Cr of the Chaldees, Mr. Ainsworth writes: " The city of Ur, which was in Ur of the Chaldees, and the seat of the nativity of Abraham and of the death of Haran, is, to the present day, denominated by the Syrians Urhoi, by the Arabs corrupted into 'Urfáh, or 'Orfáh. It is at the foot of the mountains of Osroene, and at the head of the same great and fertle plain, which contains the seats of the patriarchs of the family of Shem: Haran, and Seruj. Tradition has consecrated 'Urfáh as the birthplace of the father of Isaac, and the Birket el lbrahím el Khalíl is still supposed to contain the descendants of the fish loved by the Prophet. 'Urfáh is also celebrated as the residence of Akbár, commonly called Agbarus, by Herodotus herapoc, who is said to have written a letter to our Saviour.
"Ur was not only 'Ur of the Chaldees' (Gen. xi, 28, Aben Ezra in Gen., Bochart, lib. i, Phaleg, x, and Hugo Grotius in Gen.), but is more particularly described as in the land of the Chaldeans (Josephus, lib. i: Antiq, vii), and by Eusebius as 'U'r oppidum regni Chaldæorum,' that is, of the kingdom founded by Chesed ; the same author also says, ' In urbe Camarina, seu Urie, quæe Grecis dicta Chaldæopolis.' Oriental historians conduct the patriarch Abraham, in his migration to the land of Canaan, from Haran to

[^21]Berza, or Peroe, the modern Aleppo; and 'Abméd Ibn Yusuif, and Abu Mohamméd Mustáfah, identify Ur with Roha, the modern Urfah. From the records of the Holy Writ we gather (Gen. xi, 3 I)' that 'Terah and Abraham, with others of the family, went out of Ur to so into the land of Canaan, and they came into Haran, and dwe there. It is evident, that, had the Ur of the Chaldees been identical with the Ur of Babylonian Chaldæa, the Orehoe of Ptolemy and I'liny; that the way of the patriarehs did not lie through Haran in Mesopotamia ; but even the direction of the journey is preserved in the amplitude of the sacred text, for we are expressly informed ((ien. xii, 9), that the Patriarch 'joumeyed, going on still towards the south.'
"Ur, in the progress of corruption, became Urhoi, Roha, Orfah or 'Urfíh, and, with change of masters, Chaldæopolis, Antiochea, Callirhoe, and Edessa. Mr. Buckingham has apparently mistaken what Benjamin of Tudela says of Dakia, or Rakkah, as belonging to 'Urfáh, and hence he makes Haran two days' journey Irom that city, from which it is in reality visible at amost all times, and a ride of only eight hours, or about twenty miles in direct distance."*

The geographer Buckingham, alludes to Orfa, or Ur of the Chaldees, as follows:-
"Orfah is conceived, by all the learned Jews and Mohammedans, as well as by the most eminent scholars among the Christians, to have been Ur of the Chaldees, ftom whence Abraham went forth to dwell in Haran, previous to his being called from thence, by God, to go into Canaan, the land promised to himself and to his seed for ever. The Jews say that this place is called in Scripture Ourcasdin, that is, the fire of Chaldea, out of which, say they, God brought Abraham ; and on this account the Talmudists affim that Abraham was here cast into the fire and was miraculously delivered.
"'Ihis capital of the country between the Euphrates and the 'Tigris, the Padan-Aram and Aram-Naharam of the Hebrews, the Mesopotamia of the Greeks, and the Paradise of the poets, received from its Macedonian conquerors the name of Edessa; and an abundant fountain which the city enclosed, and called, in Greek, Callirhoe, communicated this name to the city itself. In later times it was called Roha, or, with the article of the Arabs, Or-rhoa, and ley abbreviation, Orha.

[^22]＂D＇Anvilie thinks that this last name may be derived from the Greek term signifying a fountain ；or，according to another opinion， it may refer to the founder of this city，whose name is said to have been Orrhoi，now retained，with some little corruption，in Orfah or Urfah．＂＊

There is no doubt that both Job and Palaam were natives of Aram－Naharaim，and were of the same stock as the Hebrews in the Aramean sense of the word；and so also a large majority of the Arabs．In the Book of Job it is related that bands of Chaldeans and Sabeans had plundered that Patriarch＇s camels and cattle ；it is therefore not unreasonable to suppose that both those nationalities inhabited the northern part of Nesopotamia，as we know that Haran was at one time a Sabean settlement，and the Chaldeans occupied one part of Cappodocia to the north．Diodorus Siculous mentions（Tom．i ；T．ii，p． $14^{2-1}+5$ ）the temple of the moon at Haran，whereto the Sabeans went for pilgrimages；but now that sect，which is commonly called Christians of Sr．Iohn，are only found in Southern Babylonia and in Khuzistan in Southern Persia． It is very remarkable that those interesting people，of whom there are now no more than，at the most，about one hundred thousand souls existing，speak almosi the same language as that of the Chaldeans in Assyria and Mesopotamia，called by them＂Chaldee＂ or Chaldean，erroneously styled in Europe as Syriac：but as 1 intend to touch briefly hereafter upon the nationality and language of the latter，I will confine myself，for the present，to the subject under consideration．

The origin of the Chaldeans and their ruling power bave been from time immemorial a puzzle，and I suppose the controversy will continue as it has been to the end of the chapter，especially as up to the present time scholars have not agreed as to the etymology of the word ブロ゙クロาN，Arphaxad，from which all the Semitic nations believe this nationality of the Chaldeans and Hebrews sprang．$\dagger$ Why the authors of the Septuagint translated the word אップロ， Chasdia，into Chaldean is not easily to be understood，unless， indeed，they adopted the word from the Chaldeans themselves，as we know from Josephus，alluded to above，that they were called by that name in his time．We learn，however，from the history of Dieæarchus，a disciple of Aristotle，and a philosopher of great

[^23]repute, the Chalicans were first called Cephines from Cepheas, and afterwards Chaldcans from Chaldceus, an Assyrian king, fourteenth in succession from Ninus. This Chaldeus built Babylon near the Euphrates, and placed the Chaldaens in it.* This confirms in a remarkable manner the passage in Isaiah, which has given rise to the question as to the origin of the Chaldaens:-" Behoid the land of the Chaldeans: this people was not till the .Issyrian founded it for them that dwelt in the wildemess: they set up the towers thereof, they raised up the palaces thereof." $\dagger$

The use of the word Chuldean, like that of Assyrian, was very vague. It appears to have been applied sometimes to the entire country bordering on the Tigris and Euphrates south of the mountainous regions of Asia Minor and Armenia, to only a part of it, to a race, and ultimately to a class of the priesthood. There is a remarkable passage in Jutith (chap. v, 6,7 ), in which the Jews are spoken of as descendants of the Chaldeans, a belief which is prevalent amongst all the Hebrews in liblical lands at the present day.

As to the extent of the Chaldean kingdom after the destruction of the Assyrian monarchy, there is no clouit that it must have included, in the time of the Medo-Persian Monarchy, all the provinces which were subject to Nebuchadnezzar, and called the realm of the Chuldeons in Daniel (ix, I). It is thus related there: "In the first jear of Ditrius the son of thasuerus, of the seed of the Medes, which was made king over the realm of the Chaldeans."

Now, I must say a few words concerning the expression of $U r$, which is said to have been found anongst the arrow-headed inscriptions in the Mound of Moggayir in Southern Babylonia. As I said before, it is not my business to enter into a minute detail about the etymology of the cuneiform inscriptions, inasmuch as I do not cham to be an Assyrian scholar, but I wish to try and give a commonsense view of the reading of Semitic languages. In the first place the word Ur which is said to have been found in the cunciform inscriptions is not written with regular letters of the alphahet : and if it were, it does not prove that that was Ur of the Chaldees mentioned in the 1 th chapter of Genesis, as the very fact of its leeing called L'r of the Chaldees shows that there were other Urs in Diblical lands in those days, as the Or of Salem (or lerusalem).

[^24]Moreover, the word Ur is not pronounced thus in the original Semitic languages, and even if it were, how is it to le assumed that that was really pronounced as Ur, when we know that Or of Salem in Aramaic is spelt and pronounced differently, as 97 Yeroo in Hebrew. It is very difficult for any person not quite conversant even with modern Semitic languages to understand not only the pronunciation but the real meaning of certain words, unless he has lived in the country since childhood and become acquainted with the idioms and phraseology understood by the natives. Very often a traveller finds that what he learnt in one country where habic is spoken is not to be comprehended in another. I think one example will suffice, and that is the word $\ldots$ min (which means from), consisting of two letters, meem M, and moon N. When it is pronounced differently it is turned into who? defective, being benevolent, conferring a benefit, manna, and a measure of two pounds. The most wonderful of all the changes that take place in an Arabic word is ign= Ajooz, which means an old wom.nn. There are no less than one hundred meanings to that word when it is pronounced according to its application and context. The oddest of all the combinations in the list of words under the head of $A$ jooz are, a young woman of delicate constitution; an old man; a king ; a kettle ; a pot; butter; wine; a lion; a horse; a bull ; a cow; a dog ; and a she-camel! If these variable meanings of four Arabic letters constituting an old woman are not enough to puzzle even an Assyrian scholar, I do not know what would be.

In writing to my friend, Mr. Theophilus Pinches, the learned Assyrian scholar, for his opinion about the word Ur found at Moggayir, he was good enough to send me the following answer, which will explain his idea upon the subject whether that Ur was really the Ur of the Chaldees mentioned in Genesis as being the birthplace of Abraham. He says:-
"The bilingual texts give the name of Mugeyyer thus: 天"ruk
 nunciation in Assyrian being Uru, genitive Uri, as in bil Uri, "lord of Uru," a title of Nanmar or Sin, the moon-god, who was patron-god of the city.
"You will notice that after the D.S. ('determinative suffix, showing that what precedes is the name of a place), there is the character ma (or wa), indicating that the full form of the word in Akkadian was Urima, or Uriwa. There is no trace of this extra
syllable in the Assyrian form, but it cortainly ought to be in the Hebrew, if Mugeyyer be Ur of the Chaldees. In my opinion, the extra letter or syllable at the end would have been represented by 9 , or (הורו, ואורוא אוא). That the Assyrian has " (Uru) and not o (Oru) is no argument against the identification, as the same vowel had to do duty for both $"$ and $o$ in that language. Except the likeness of the name, I do not know why scholars have identified Ur-Kasdim with Uru (Mugesyer). They regard the latter as being in the land of the Chaldees."

Through the blundering of the Grecks there has heen no end of confusion in like manner as regards the word $}$ Aram in Hebrew, which was corrupted into Syria, and $\because \sim$ N Aramee into Syriac ; and so it happened in regard to the ancient name of Assrrians, as Herodotus mentions in his Polymnia (Book VII, chap. $6_{3}$ ), that the Greeks called them Syrians. Professor George Rawlinson, the present Canon of Canterbary, however, has tried to contradict in his learned work,* entitled "Rawhinson's Herodotus," the father of history, by alleging that "Syrian" is nothing but a variant of Tyrian," and that Syrian and Assyrian are two entirely different words. That the (ireeks when they first became acquainted with the country between Asia Minor and Egept, found the people of Tyre (Tzur) predominant there, and from them called the country in which they dwelt Syria (for Tsyria, which was beyond their powers of articulation). Afterwards, when they heard of the Assyrians, they supposed the name to be the same, though it had really a very different sound and origin Then he goes on to say: " The difference between the two words will be seen most plainly by reference to the original languages. The root of 'Syrian' is in Hebrew בור (Tzur), the root of 'Assyrian' is (Asshur). A still greater distinction is foumd in the Assyrian inscriptions, where Assyria is called Assur, but the Tyrians are styled Tsur-ra-ya, the characters used being entirely different. With respect to original meaning, Tzur seems to be rightly explained, as so called from the rock (יוּ) on which the town was built ; Asshur is perhaps to be connected with $\begin{gathered}\text { © 'happiness,' at any rate it can have no con- }\end{gathered}$ nection with tzur."

It is difficult to understand how Professor Rawlinson manages to prove his argument by asserting that the word Syrian was a
corruption of the Greek Tyrian, or the Hebrew Tzur! In the Semitic languages Tyre is rendered יור Ssoor with the hard $s$, or ssadee), and in the Greek and other European languages it has been called Tyre, or Tyrus. In the Septuagint version of the Old Testament there is a great distinction between the words Tire and Syrian. The former is written Tupor, Tyrian, or Tupion, but the latter is mentioned as $\Sigma$ vupen, Syrian, which is a corrupt rendering of Aram. Moreover there is no such word as Syria in Hebrew or Aramaic, but the proper word is $\boldsymbol{\square}$ S Aram. This proves that when the Old Testament was translated into Greek, the term Tyre was understood to have no connexion with the foreign appellation Syria, they being two distinct nomenclatures. Even the late Sir Henry Rawlinson, the brother of the Professor, considered that the word Syria was a corruption of Assyria. as it will be seen from his remark upon his brother's note in "Herodotus," Book I, chap. 6. in which he says, "[tlie only true word is Assyrin, from Asshur. Syria is a Greek corruption of the genuine term.-H. C. R.]."

Even in the present day people are puzzling their heads whether the Chaldeans of Assyria and Mesopotamia, of which nationality I am, are entitled to that ancient name, as if those people had no origin, but had fallen from the sky! Indeed, the members of the Archbishop's Mission to the Assyrian Christians have taken the liberty of giving them a new name by calling them "East Syrians," an appellation which is quite foreign to them, as they never had any connexion with Syria, and their country lies on the eastern side of the Tigris, known as Assyria, and not to the west of the Euphrates : Being ignorant of the habits and customs, and historical changes in Biblical lands, they have drawn their conclusions from the word "Soorayé," by which, as they allege, the Nestorians, who inhabit the highlands of Assyria, call themselves. This is a mere religious term which means Christion, like the sect of the Nararenes.: "Sooraye" is a corruption of the word athooray' (Assyrian), the same as Othman is corrupted by the Turks into Osman, and turned into English as Ottoman. The th as in three is turned into $s$, as it is now pronounced by different Biblical nationalities, such as the Yezeedees, Coords, and Persians.

The Chaldeans, both as a nation and a sect, have been mentioned by different writers from time to time, namely-Herodotus,

[^25]Nenephon, Josephus, Bar Hebracus, Assemani, and the modern seographers : and the Arab historians, in particular, allade to Assyria as Athour, on the eastern side of the Tigris, where Nineveh is situated. The Chaldeans of the present day, therefore, are considered also Assyrians from the country they inhabit; and with regard to their language they have always retained the Aramaic dialect, which is called in the Targum, Daniel, and Eara, Chaldee, hat is known in Europe as Syriac. The word Syriac, or Siryance, is applied by them to the characters used by the so-called Syrians or Jacobites. It is true there is very little difference between the chaddean and the Syriac, but the dissemblance is marked in the formation of the letters, and the pronunctation of a number of words like Yegar-sahadutha* (heap of witness), Maran-atha $\dagger$ (our Iorl's coming), Ahas \& (father), Talithas (damsel), Maria (Lord), Wlaba (frod), which the Syrians prenounce Yogor Sohodotho, Morenotho, Obho, Tolitho, Morio, and Olloho.

Fornerly the Syrians of Mesopotamia, who were of the same descent as the Chaldeans, spoke their language and wrote like them; hout in the thitiemth century Bar-Hebraus, a promoter of the I colites, wishing to make a thorough distinction between the writing of the Monophysites and that of the so-called Nestorians, on arcount of the bifter ductrinal antagonism which existed between those two sects, changed the characters and rowel points. The ('hakdean P' and A were changed into F and O respectively; and if we refer to Holy Writ, whether Helrew or Greck, including the septuagint, it will be found that the present Chatdeans keep to the old pronunciation.

There is no doubt that the Nestorians of the highland and the lowland of Assyria were of the same origin as the Chaldeans of Mossul; binghdad, and biarbekir; laut socially speaking they do not stand on the same footing, because, while the former, with few exceptions, are moral and of the peasiant class, the latter are cultured and stand in a higher status of society.

There ran be no better proof of a people's mationality than the language, homestead, and history; and certainly no nation in the world has a better claim to Assyrian and Chaldean descent than the (hadeans of Assyria and Meropotamia. Their language has Whays been Chatdec, though Mrabic is now the common language

[^26]of the country, which was adopted in the time of the Arab conquest. Their country was known formerly as Assyria, and history has always pointed to that country as being the fatherland of the Chaldeans and Assyrians. Jenephon mentions in his Cyclopædia that when he passed through the mountainous regions of Assyria and Media he met with three nationalities, namely,-the Carduchi (Coords), Armenians, and Chaldeans; and at the present time these three distinct peoples are found in the same country. No one doubts that the two former are remnants of those mentioned by Xenephon, yet the third, who are now styled vulgarly, in a religious sense, "Nestorians," must have no nationality of their own, because, forsooth, some foreign travellers took it into their heads to attach to them a strange term as Nestorians, which is merely a nickname like Lutheran or Wesleyan. In the greater part of Assyria Chaldee is spoken ; but in Mesopotamia the common language is Arabic ; and each of the different Christian communities retains its mother tongue in its church services and ecclesiastical correspondence. So also in Syria, the Holy Land, and Egypt, like the Greeks, Armenians and Copts ; but all official communications are carried on in Turkish. It is very remarkable that the present Chaldeans are called both Chaldeans and Assyrians, and their ancient national language is Aramean or Chaldee, derived, as that of the Hebrews, from Aram, one of the sons of Shem. There is no doubt their origin came from Arpachshad, Asshur, and Aram, mentioned in the 22 nd verse of the tenth chapter of Genesis. When and how the affinity and amalgamation came into existence in ancient time must be left to conjecture, but there is one thing certain, that in accordance with Semitic custom, when people intermarried with a different nationality, they adopted the name on the mother side ; and it may be that the Arpachshadites at one time or other intermarried with the Arameans, from whom they obtained their present language.

The habits, customs, and dress in biblical lands have undergone a great change, except amongst the Arabs, during the last fifty years. The higher class of Christians have adopted the European costume, and the French and English languages are being cultivated, especially the former, on account of the number of schools opened by the Vatican Missions. Formerly in most places, particularly in Syria, degrading restrictions were imposed upon the Jews and Christians in their attire ; and at one time, in a large number of cities, no Christian or Jew was allowed to ride a horse, and if they
rode donkeys, as their lot, they were compelled to dismount when they passed a Moslem of rank or the precincts of a religious place. The ladies, too, have changed, in a great measure, their primitive costumes, and taken to European apparel. They even go so far as to wear gloves, laced boots, and complete their attire by carrying sunshades! The nomad Arals and Coords, on the contrary, keep to their old costumes, which I think have not seen much change from primitive time. The food of the Coorls and Arabs, and the iower classes of the inhabitants of liblical lands, has not changed much, as the "savoury meat" which Isaac desired Esau, his son, to prepare for him, is still a standing dish amongst the primitive inhabitants of the land.

The Arabs, especially the women, still go about without wearing drawers, as the custom used to be amongst the ancients like Noah* and the Israelites. $\dagger$ Amongst both Christians, Hebrews, and Moslents, it is a sin to enter any place of worship with their shoes on, as they adhere to God's command to Moses at the burning bush, $\ddagger$ though the former and the Jews are now following the European habit of performing their religious rites with their dirty shoes and boots on. It is a notable fact that up to the present day all Moslems, whether Turks, Arabs, Persians, or Indians, conform to the same divine command by taking their boots and shoes off when they perform their worship, though they are quite ignorant of the origin of the ceremony.

The ancient custom of washing the stranger's feet is not practised now in biblical lands, but it is in vogue in Abyssinia. Generally speaking those who perform this duty are females, but I was one of those few who preferred to do the necessary ablution for myself.

The ancient biblical habits still exist in Mespotamia, amongst both Christians and Moslems, of rending their garment \$s a calamity, or grief or anger: smiting upon the breast| at prayer or supplication; bowing their heads to the ground in the act of worship, or homage ${ }^{* *}$; throwing dust on their heads, and covering

|  | Cicnesis, ix, 2 t . | 1 Exochus xx, 26. | $\pm$ Exodus, iii, 5. |
| :---: | :---: | :---: | :---: |
|  | \$ 2 Sam. xiii, 19. | \|f Luke, xviii, 13. | - Cicnesis, xuii, 3 . |

*** Kulb, ii, io. This kird of homage can also be noticed on the black olelisk fotme by Sir Henry Layard at Nimroud, where the ambassador of King Ahab is cen falling on his face before Shalmaneser. It is also remarkalle that all Aohammedan worshipers, when praying, have to go down on their knees and wheh the gromet with their forcheads.
it with their hands in great affliction * and such like misfortune.

It was prophesied by Nahum (ii, 7) respecting the destruction of Ninevah thus: "And Huzzab shall be led away captive, she shall be brought up, and her maids shall lead her as with the roice of doves, tabering upon their breasts." This kind of lamentation is most scrupulously practised in the Irack (Babylonia) by the Sheea sect of the Moslems, when the anniversary of the murder of their patron saint Hosain is commemorated. I have seen blood gushing out from the wounds caused by the severe tabering on the breasts of young men when they were bewailing the historical tragedy.

The most remarkable observance which still exists amongst the Arabs is the "covenant of salt," as it prevailed with biblical nationalities in primitive time. We find it was a divine ordinance amongst the Israclites to celebrate their heave offerings with salt. $\dagger$ In writing to Artaxerxes, King of Persia, of their fidelity to him, the governors beyond the Euphrates tell him thus: "Because we eat the salt of the palace it was not meet for us to see the king's dishonour, therefore have we sent and certified the king." +

I must end by relating a quaint story which happened to a friend at Aden, the Arabian British settlement, when I was acting as first assistant political resident there. He was looked upon with great veneration by all Arabs of Arabia Felis, not only on account of his sainted ancestors, but for his piety and influence in the country, which reminded me of the trick played upon Jacob by Laban. His name was Seyyid Alowi Alaidroos, the chiefest amongst the Aden Arabs, and he having heard that the Sultan of Lahaj had two handsome sisters, contracted to marry the youngest, who was reposted to him to be the best looking of the two. Of course, according to the custom of the notable Arab families of that country he was not privileged to see his betrothed, but trusted to the praises and commendations of his female friends who, I have no doubt, related to him everything about her, even to her graceful walk and sweet sounding voice. Her brother consented to the marriage, and when the happy day came and the wedlock ceremony was performed, he found that instead of the damsel he chose, the elder one was given to him. It can well be imagined in what a state my friend

[^27]got into when he found the unexpected change. When he remonstrated with his brother-in-law for the trick he had played him, he was told that it was contrary to Arab rule to marry the younger before the elder, but he promised him, after he would fulfil her month, to let him have her sister, which he did. I am glad to say that my friend was quite satisfied and lived a happy life with the two sisters afterwards, and the two damsels were in like manner elated at having a distinguished descendant of the prophet Mohammed as their lord and master.

There also occurred another biblical incident in my time in Abyssinia, illustrating king Saul's capricious behaviour with regard to the re-marriage of his daughter Michal, the wife of David, when the latter had to flee from the fury of the former (i Sam. xxv, 44). When Menelik, the present Emperor of Abyssina, was a semi-captive with King Theodore, the latter gave him his daughter in marriage; but, on finding that his father-in-law was getting more cruel every day, and his best friends were not safe from his inhuman deeds, he deemed it prudent to decamp. When Theodore learnt of his son-in-law's escape, he at once re-married his daughter to another favourite courtier.

## THOTMÉS III, ÉTAIT-IL LE FILS DE THOTMES I ?

 Par J. Lieblein.Longtemps l'opinion a été généralement adoptée que Thotmès [II était le fils de Thotmès I et le frère cadet de Thotmès II et de la reine Hatasou ou Hatshepsou. Cette opinion, pour la premiere fois émise par Hincks, était fondée sur un monument du British Museum, la statue du prince Anebni, qui formellement et sans équivoque nous apprend, que Thotmès III était le frère de Hatasou, $\operatorname{man}_{\longrightarrow \rightarrow \text {. Mais dans les derniers temps un monument a été trouvé }}$ qui, selon l'explication que l'on en a donnée, au contraire prouve, que Thotmès III serait le fils de 'Thotmès II et par conséquent le neveu de Hatasou. C'est une stèle mise au jour dans le tombeau d'Anna par M. Boussac, publié dans le Recueil (Recueil de trazaux, t. XII, pp. 105-107) par M. Bouriant et partiellement commentée et traduite par M. Maspero dans les Proceedings (Proc. Soc. Bibl. Arch., vol. XIV, pp. if6 ss.). MM. Bouriant et Maspero sont dopinion que Anna dans ce texte nous raconte son histoire sous les pharaons Amenophis I et les Thotmès I, II et III. Cependant, il faut tout d'abord remarquer que le seul roi qui est nommé est Thotmès II et que les autres ne sont indiqués que par des indices plus ou moins certains.

Et puis consultons un peu plus proche notre texte. Les lignes $\mathbf{1}-5$ se rapportent probablement à Amenophis I, dont la mort est mentionnée dans la ligne 4. Les lignes suivantes, 6-14, ou peut-être jusqu'à la ligne i6, se réfèrent sans aucun doute à 'Thotmès I. Le roi n'est pas nommé, mais d'après les lignes 9 et 10 il a érigé deux obélisques et se servait d'une $\square \square$ vingt coudées long et quarante coudées large, pour les transporter à Thèbes, ce qui doit avoir rapport aux deux obélisques bien connus que Thotmès I a érigés dans le grand temple de Karnak.

Dans les lignes $\mathbf{x}^{4-\mathbf{1} 6}$ nous lisons ce qui suit:
" Le roi (Thotmès I) sort au ciel après aroir vecu ses années dans la joie du cœur, ayant l'épervier, le roi Thotmès II, dans le nid; l'Egypte était son royaume son empire, il a conquis les deux terres par la justice. Je remplissais le cour dur roi en toutes ses places; il a fait plus pour moi que pour les nobles d'autrefois; j'atteignis l'âge des am $\chi^{\prime o u}$; j'étais dans la faveur de sa Majesté sur le trône de Re. Je mettais sur la table d'offrande du roi une plénitude de pains, de choses pures pour le roi, de bière comme de viande, de fruits ( $2{ }^{\circ} t^{\circ}!t, x I \times I$, fructus. Brugsch, Supplément du Dictionnaire), de plantes (?), de tgr, plusieurs sortes, de miel, de sables, de vin, d'huile de qab. On réglait mes affaires en santé et vie selon ce que disait le roi lui-même ì cause de mon amour."

Dans toute cette partie que j'ai traduite textuellement il s'agit probablement de Thotmès I ; ce qui me porte à le croire, c'est la mention d'une offrande qui ne peut bien étre autre chose que l'offrande funéraire apportée par Anna après la mort de Thotmès I. "Le roi," "sa Majesté," et le sujet re répété indiquerait la même personne, Thotmès I. Voici le sens de ce morceau du texte:

Après avoir dit que Thotmès I était mort et qu’il avait laissé un jeune fils comme successeur, Amna ajoute quelques remarques sur le roi décédé ; il mentionne les favcurs dont il avait joui sous le roi et raconte qu'il avait eu soin de l'offrande funéraire de Thotmès I. Immédiatement après la partie traduite plus haut, Anna continue son récit par répéter la phrase sur la mort de Thotmès I:-
"Quand, sortant au ciel, il (Thotmès I) eut joint les dieux, son fils (Thotmès II) se tint à sa place comme roi des deux pays, et il fut prince sur le siège de celui qui l'avait engendrè (tandis que) sa sceur (la sceur de Thotmès Il), la divine épouse Hatasou fit office d'administration du pays," etc.

Ici la répétition de la phrase sur la mort de Thotmès I pourrait très bien étre motivée par le désir d'Anna de constater la situation politique après la mort de Thotmès I, à savoir que son fils mineur Thotmés II fut roi de nom, tandis que Hatasou, depuis long temps installée dans le gouremement par son père Thotmès I (Naville, La succession des Thoutmés, dans Zcitschrift fuir Ägy, Sprache, XXXV' Band, p. $2_{3}$ ), fut roi de fait.

Par conséquent il n'y a aucune nécessité de voir dans $?^{210}$ (ligne i6) le roi Thotmès III qui n'est pas nommé dans toute l'inscription, et sans nécessité urgente il n'est pas permis de rejeter un témoignage aussi direct que celui de la statue d'Anebni, dont l'inscription est tout-à-fait claire et certaine.

Pourquoi faire des difficultés où il n'y en a pas? Elles sont toutes levées par l'explication de notre texte que j’ai proposée ici, explication qui au moins n'est pas impossible, si elle n'est pas certaine sans recourir à l'inscription de la statue d'Anebni.

Cependant, il y a encore un autre monument, un colosse de Thotmès II, qui semble indiquer que Thotmès III était le fils de Thotmès II. Mais l'inscription dont il s'agit ici n'est pas intacte, et le cartouche est mutilé précisement dans la partie qui distingue le prénom de Thotmès II de celui de Thotmès I, de sorte que l'on ne puisse tirer aucune preuve décisive de ce monument. C'est aussi Popinion de M. Maspero qui a discuté cette questicn au long. (Proceedingss, vol. XIV, ifi ss.) Naturellement, car la preuve n’a aucune valeur réelle, quand elle manque le point essentiel et caractéristique, comme c'est le cas ici.

Donc, tout bien réfléchi, je le crois prudent jusqu’à nouvel ordre de rester par l'opinion de Hincks, ci-après acceptée par tous les égyptologues, que Thotmès III était le fils de Thotmès I.

Il ne m'est pas possible, je l'avoue franchement, d'accepter les conclusions hardies auxquelles M. Sethe est arrivé dans son remarquable mémoire, Die Thromaiirren unter den Nachfolgern Königs Thutmosis $I$, et je me range entièrement à la critique que M. Naville en a donnée dans son travail, La siaccession des Thoutmès d'après un mémoire récent ; mais dans le point spécial que j’ai traité ici je suis pourtant d'accord avec M. Sethe.

## THE BEGINNINGS OF THE EGYITIAN MONARCHY.

\author{

1) Ahablis Istar. <br> Jamuar!, 1898.
}

Dear Mr. Rilands, -
I have just been studying M. de Morgan's new work on Egypt: Ethnographie préhistorique et Tombeat royal de Négadah, which is, as the Germans would say, "epoch-making." Its importance is enhanced by the discovery made by Dr. Borchardt since it was in type, that the royal tomb found at Negadah is that of Menes himself, the founder of the united Eigyptian monarchy. This, however, does not affect any of M. de Morgan's conclusions, since the archeological evidence had already led him to ascribe the tomb to an earlier date than those of the First Dynasty kings discovered by M. Amélineau at Abydos. Indeed, the discovery of the name is a confirmation of the soundness of M. de Morgan's method and of his interpretation of the archelogical facts.

I am not, however, going to write a review of the book, but wish only to offer some illustrations and explanations of the arehaic hieroglyphic inscriptions given in it. I have long been interested in the seal-cylinders of Babylonian type which have been bought from time to time from the antiquity-dealers of Upper Egypt, believing them to go back to the very beginnings of the Egyptian monarchy, and to indicate a connection at that early date between Egypt and Babylonia. The hieroglyhic inscriptions on most of these seal-cylinders have hitherto been unintelligible, owing chiefly to the strange forms and combinations of the characters engraved upon them. The seal-cylinder impressions found at Negadah and Abydos, however, now throw light upon them, and in return receive light themselves.

The names found in the Negadah and Abydos tombs are for the most part banner or ka names, surmounted by the hawk of Horus. This is natural, since the oljeets on which they occur were buried with the dead, and consefuently they are the names of the dead and not the living kings. Lpon one objectonly-an ivory flaque-does the name of Men or Menes, for example, accompany his Ilorusname tha.

2.
3.

6. $\left.I_{2} \Delta \eta \stackrel{\square}{\square}\right\rceil \cap \cap \square$

S. $\overbrace{\pi} \operatorname{Hy}_{1} \rightarrow \frac{\pi}{\pi}$

10. $\overbrace{L}^{\sim} \cap \underset{\infty}{\infty} \int \rho^{-k}$

In one instance the Horus-name Aha is accompanied by the figures of three ostriches, a sign which is met with also on other objects found in the tomb of Menes. I believe that they represent the well-known hieroglyph baiu, "soul(s)," in which another bird has taken the place of the ostrich, which scems to have become extinct in Egypt after the age of the First Dynasty. It was, however, very plentiful there in prehistoric times, as is shown by its frequency in the rock-carvings. I have a copper ring from a prehistoric or First Dynasty tomb at Kom el-Ahmar opposite El-Kab on which two ostriches are engraved.

Several small plaques of ivory were found in the tomb of Nenes, on one side of which are certain numerals, perhaps denoting the number of beads in the necklaces which are depicted upon two of them, while on the other side are in two cases the characters sh-t, and in four cases lictep accompanied by a character which is unknown to the later hieroglyphics. I have found it, however, on some sealcylinders in Mr. MacGregor's collection (Nos. 1, 2, 3), all of which are of the short, thick type, with a narrow hole running through them. On No. i the $\underline{l}$ on each side of the name Nezen (?) reminds us of the $h-t$ which stands between the Horus names of Menes in one of the inscriptions from his tomb.

No. 3 is especially important, because the inscription upon it is identical with a ka-name (without the Horus) discovered in the tomb of Menes, and which may therefore have belonged to one of his sons or wives. The only difference between them is that the plant (ha) which intervenes between the unknown character and the ostrich on the cylinder is placed outside the kor-name in the seal impression from Negadah.* The latter shows that the unknown character represents two arrows crossed and attached to a staff or standard. Can it have been a symbol of the goddess Sati or of Nekheb? When two horns were placed above it, it represented the goddess Safekh. In No. i it is engraved immediately before the table of offerings with the cake above it, before which the deceased sits. In No. 2 it precedes the name of "the city of the goat." Are we to interpret this "the city of Ba, the city which is called Dad"? On another cylinder, No. 4, another sign which bears a faint resem-

[^28]blance to $\mathscr{E}$, takes the place of the one we are discussing.* It may be roted that the cylinders make it clear that the hieroglyph $\square t$ is a picture of the cake that was offered to the dead.

On the stele of private individuals found in the royal tombs of Abydos, and belonging, as Prof. Erman suggests, to the retainers of the king, the name of the deceased is preceded by the two hieroglyphs $\overbrace{\text { S }}^{3}$ ka k/u, where the k/u or luminous ghost is embraced by the arms of the $k a$ or doulle. On one of Mr. MacGregor's cylinders (No. 7), which, like the others, is of the short, thick type, we have exactly the same compound character, the whole inscription reading: "The deceased, Ska (or Ploughman) the son of Ska-f." The seal seems to have been that of a fcllah attached to the land of a king or noble.

On some of the early seal-cylinders the bennu or Pheenix makes its appearance. On one of those belonging to Mr. MacGregor, but of the later type, with a large aperture, the word is written phonetically
 on one of the older type belonging to Mr. D. C. Robertson (No. 8) the bird is described as "the Phemis, the ka (or double) of Horus." It is also found on two of Mr. Maçregor's cylinders of the older type (Nos. 9 and 10), as well as on two cylinders (Nos. 11 and 12) now in the Ashmolean Museum at Oxford, on the first of which we have an interesting form of the crux ansata, also met with on Hittite seals, while on the other is the sign for metal ( $b r i$ ). Most of these cylinders of the early type are made of steatite, which was so largely used in that second half of the prehistoric age of Egypt which overlapped the First Dynasty.
'The most interesting seal-cylinder in the Ashmolean Mluseum, however, is one of white stone, with a large hole that is only partially bored, as I read upon it the name of Atotha, who was the grandson of Menes according to the Tablet of Abydos. The inscription (No. I ${ }_{3}$ ) is as follows: Nefor kheru (?) mit mherneter Atotha suten ankl/ merer, " Nefer the deceased, in Hades, belored of Atotha the living king."

[^29]I come now to the fragments of the steatite plaque, called by Prof. Steindorff "The Green Stone," the portion of which, now at Gizeh, is beautifully reproduced by M. de Morgan. M. Jéquier says of the fragments, that "the origin of them is not exactly known." This is not the case, however. They were found at Abydos in 1882, and one of the discoverers told me that the plaque was perfect when it was first disinterred and was only afterwards broken owing to a quarrel among the finders. The quarrel also led to one of the fragments, which was described to me as "covered with hieroglyphics," being thrown into the Nile. All the fragments were offered to me for a small sum, but I was unwise enough not to purchase them. One of the fragments, which is now in the Ashmolean Museum, and is not noticed by M. Jéquier, has upon it the figure of a giraffe. As I pointed out in the Academy several years ago, this connects the piuque with the rock-drawings of Upper Egypt, in which the giraffe is so frequently represented. On the other hand, the style of art of the plaque is that of the early monuments of Tello in Southern Babylonia.

The fragment now in the Gizeh Museum contains the names of seven cities all enclosed within the fortified wall which subsequently became a cartouche. The hieroglyphics sculptured within them take us back to the very beginnings of Egyptian writing, and when compared with the conventional hieroglyphics of the tomb of Menes, presuppose an interval of time that must be measured by centuries. The symbols of the Egyptian deities placed above the names show that they represent Egyptian cities, and we may therefore see in them the chief towns of the Upper Egyptian king for whom we may assume the plaque was made. I read the names as follows: "The city of the eight owls, beloved by Horus; the city of the seven $D_{e b}$ (?)-birds, beloved by . . . ; the city of the Twins [beloved by . . . ]; the city of Kheperu-Ru (or perhaps Kheperu) [beloved by . . . ) ; the city of Kau (?) beloved by Sekhet ; the city of Pû, beloved by Selk ; the city of the kings beloved by the monarch." On the fragment of the plaque in the Lourre the emblems of Anubis (twice repeated), Thoth, Horus and Min, are seen on standards, the lower end of which is a hand grasping a rope.*

[^30]In the second name the bird is like that which has the value of deb in later hieroglyphies, and reminds us of the name of Debu or Edfu, where Horus first overcame his enemies and established his kingdom in Upper Egypt (see Maspero: Les Forgerons d'Horus et la Lésende de l'Horus d'Edfou in the Bibliothéque ésyptologique, II. pr. $3^{1} 3^{-3} 36$ ). It is matural that the first city in the list should be dedicated to Horus, who represented the Pharaonic Egyptians, and the establishment of a monarchy on the banks of the Nile. But the bird may also be intended for the crested iDis (?) or Khu of later times ; if so, we must remember that the Klut are usually identified (as in the Papyrus Hood) with the "Manes" of Manetho, the legendary predecessors of Menes, and that according to the ancient tradition embodied in the 17 th chapter of the Book of the Dead, there were seven Klut. Moreover, an old subdivision of the third nome of Upper Egypt was the "district of Zaui," or the "Twins," and the town of Hat-Zaui is mentioned in the Calendar of Festivals at Esneh, the name being expressed by two birds (heteri) which bear a close resemblance to the bird depicted on the plaque. At all events the name of the third town on the plague is that of the "'Iwins," in which I should be inclined to see Há-Zaui, between Esneh and Kom el-Ahmar, the ancient Nekhen, opposite El-Kab.

The mame of the fifth town seems to be formed by the sign $k a$ though it may be some other object) followed by the mark of the plural. The sixth town is Pu, $口$, where the character for $p$ is plank the picture of a comb, as in one of the stela (No. So3) from Abydos. The origin of this common hieroglyphic is thus at last made out.

In the name of the 7 th town we have the primitive form of the plant which represents suten, "king." The name therefore reads Sutimiu, " the royal" city. It was the capital of the kingdom, and is consequently described as "beloved by the monarch," the two hawks seated on standards being shown by an inseription from Abydos, as is pointed out ly M. Jépuier, p. 243, note 1 , to denote royalty.

The name of one more rity is found on a fragment of the platue, now in the lourre. But the bas-relicf above it implies that it was a
city of the enemy, and it is not described as "beloved" by any of the gods. It is represented by a small stone pot (nu), such as is found in the prehistoric and First Dynasty tombs, in front of which stands a lion rampant ( $m a$ a), the emblem of Sekhet in the Gizeh fragment. The two signs probably form a compound character.

In the "Green Stone" we thus have probably a monument of the conquest of Upper Egypt by the Pharaonic Egyptians, and the establishment there of a monarchy by kings whom later history knew as the Hor-shesû or "followers of Horus." We detect upon it the Egyptian hieroglyphics in the process, as it were, of formation, and can form some idea of the long development that was needed before they became the characters that were used by Menes and his successors.

> Yours very truly,
A. H. SAYCE.
P.S.-Since the above was written, it has occurred to me that the following may be an explanation of the $\cap \cap$ and $\& \&$ between which what seem to be royal names are written on the cylinders. Can they represent $\cap \odot \cap$ "nine," and $\delta_{\ell}^{\alpha} \odot$ "age," where the later system of writing preserved a recollection of the earlier usage by placing the ideograph $\odot$ between the two hieroglyphics? If so the meaning will be, "the age of Nezen" (No. i), "the nine of Kha, Tezzen" (No. 4), \&c. On one of Mr. MacGregor's cylinders, of which I will send a copy hereafter, we have, Kh-p-nefer (?) mut-th s $M-n-a$ s $M-n-a-t$ sul-t-n-t mer-r-r-t, "Khep-nefer (?) . . . in the time of Mena, beloved by the queen Menat." The name of Nefer kheru (?) mâ, given above, is also found on the clay impression of a cylinder discovered by Prof. Petrie at Ballas. (Petrie: Negada and Ballas, LXXX, 1,2 ), where it seems to be associated with the ka name Saḷu.

TRANSACTIONS.

## PROCEEDINGS.

A few complete sets of the Transactions and I'roceedings still remain for sale, which may le obtained on application to the Secretary, W. II. Rylands, F.S.A., 37, Great Kussell Street, Bloomsbury, W.C.

## PROCEEDINGS

OF

## THE SOCIETY

OF

## BIBLICAL ARCHÆOLOGY.

TWENTY-EIGHTH SESSION, 1898.

Third Meeting, ist March, i S98.
The Rev. JAMes marshall, M.A., in tie chair.

The following Presents were announced, and thanks ordered to be returned to the Donors :-

From the Comité d'Organisation:-Actes du Dixième Congrès
International des Orientalistes. Session de Genève, 1894.
Comptes Rendus. Sections I to VII, in 4 volumes. Leiden, Brill. 1895-97. Svo.

From R. A. Rye, Esq. :--The Early History of the Hebrews. By Prof. A. H. Sayce. London. 8vo. I 897.
[Nos. clii \& cliil.] 105

From G. F. Legge:-Religion and Conscience in Ancient Egypt. Lectures delivered at University College, London. By W. M. Flinders Petrie, D.C.L., LL.D., Ph.D. London. Svo. iSgS.

From J. Pollard :-Catalogue of Antiquities from excavations at Deshasheh and Behnesa (Egypt Exploration Fund), and El Kab (Egyptian Research Account). Exhibited at University College, July, i S97. Syo.

The following Candidate was nominated for election at the next Meeting to be held on the 3rd May, isgs:-
M. l'Abbé Leuridan, Bibliothècaire des Facultés Catholiques, Lille.

A paper by Prof. Dr. Wicdemann, entitled, "Obscrvations on the Nagadah Pcriod," was read by the Secretary.

Remarks were added by Mr. Jos. Offord, Dr. Hall Gladstone, Rev. Dr. Löwy, Mr. W. Boscawen, Rev. S. D. Brownjohn, Mr. F. W. Read, Mr. John Tuckwell, and the Chairman.

Thanks were returned for this communication.

## OBSERVATIONS ON THE NAGADAH PERIOD.

By Prof. Dr. A. Wiedemann.

$$
\text { (Receized Oct., } 18_{97} \text {.) }
$$

The slate plates of the time before the IVth dynasty,* found in the tombs of the type of Nagadah, have been declared by de Morgan, $\dagger$ evidently correctly, to be amulets, though the proof of this interpretation is still wanting for the single classes. The figures of animals will represent the boly animals of the different gods of this perind, as for instance : the hawk will be the animal of Horus of Edfu, in whose legend the remembrance of the oldest time of Egyptian history remained down to the hellenistic period. $\ddagger$ It is more difficu!t to ascribe the fish to a determined divinity, the cult of the fish being very insignificant in later times. § But this was not always the case, as is shown by a series of remarks dispersed through the religious texts. Thus in a passage of the Book of the Dead, very often referred to in ancient times (chap. 15, 1. 24 sq.), great importance is accorded to the perceiving of the fishes $\dot{a} n t$ and $\dot{a} b d$,

[^31]the fishes appearing here to be in relation with the sun-god Rā, while other texts point to a relation of the fish with Horus.* The tortoise $\dagger$ and the elephant afterwards lost almost entirely their religious value, hut this fact does not prevent that value having been very important in ancient times, when the elephant was very welt known, as the old graffitis and the name of the island of Elephantine prove, while later on the animal appears merely as a curiosity.

More puzzling than these representations are the geometrical figures very often found. Some of these are to be explained, as Petrie $\ddagger$ has shown, as having their origin in the increasing abreviation of animal figures, particularly of fishes and tortoises, but, with others, as with the rhomboids and the rectangles, this derivation is impossible. For the first of these I dare not propose any interpretation, the second appear to me as reproduction of the sign $L_{\perp} d k x$. This fact is shown by a rectangular plate in the Gizeh Museum (room 65 , nr. 786 ), where is drawn on the plain surface parallel to the border on the upper, the right and the left side a single line; on the fourth side this line is slightly vaulted on the right and the left, the two vaults joining in the middle into a drawn in point. At the upper part of the line at the right and at the left side a hand is seen with outstretched fingers, the whole forming in this way exactly the $\operatorname{sign} L J$ lying on the plate.

We are accustomed to explain the sign $\rfloor$ as the representation of two arms lifted upwards; the point sometimes found in the middle of the under line would then be the head of the person who lifts up her hands. The Egyptians of the later periods had similar ideas; they took the sign gencrally as synonymous with $\frac{18}{H}$, and brought it together with the root ka, "lift high, be high." But it appears to be very doubtful if this explanation is right in every case and at all times. Just for the conception, for which the sign $L$

[^32]$\pm$ Nagada, p. 43.
is the most often used as an ideogram, the name of the second I of the man, the relation with "be high" does not fit, as we do not find emphasized in this ka a fundamental quality, which has to be connected with such an idea in the litteral or figured sense.

Another point is, that the position of the sign is not always the same. It appears often in already very ancient texts upside down M, not only in the title hen-ka, but also at other places,* and even laid on one side $]$, thus contradicting the ordinary explanation. With this also the manner is not congruent in which the sign is written by exception on some old monuments. There one or two horizontal lines run from one joint of the hand to the other, $\dagger$ repre senting evidently strings with which the arms are bound together. Under these circumstances I believe that the comprehension of the sign in the designation of the human $K^{\prime \prime} a-$ in the writing of $k a$, "high," the old idea will have to remain-must be taken from another side.

It is well known that Petrie has found at Tukh as well as at Medum corpses showing the two arms standing in right angles from the body. If we take the sign $k a$ for the abbreviated representation of such a body, on which the two arms could be bound together to give them the right position during the stiffening, the origin of the sign as well as all the peculiatities of its use are explained, particularly its applying to the dead, which is quite equivalent to the manner of designing the Osiris by a figure of the enveloped mummy.

The importance of the Kic in the minds in the period of Nagadah needs no proof. As it was then usual to give to the dead king in his tomb a stela with his Kir name, thus it appears to have been a custom to put a rectangular slate plate with the subject as representation of his Ka. That inscriptions, especially proper names, are wanting on these pieces, will have the same reason which induced the men of this time to put nearly all objects uninscribed in the tombs, a custom kept up to the beginning of the Old Empire, where the interior of the pyramids and tomb chambers remained textless. They probably feared that the human and animal figures in the hieroglyphs could win life, and thus become dangerous to the

[^33]deceased, a peril which the later Egyptians tried to avoid in the more recent pyramid texts, by representing only parts of the figures, and down to the XIIth dynasty by decapitating sometimes in the funcrary inscriptions the snakes, as also by suppressing the legs of the birds, etc.

The independence of the Kia from the man was even greater in the early times than afterwards. Till the Vth dynasty not uncommonly prophets of the Kia of the king are to be found. This priestly office has been generally taken as being identical with the prophets of the king himself. But this is not the case; it is a double cult, of which the vestiges are to be found in these two designations. This is proved by the fact, that the same man could quote side by side the two priestly offices as being held by himself; as the king's son Kedech-schepses does on a calcarious pillar, now in the Gizeh Muscum (room I), where he appears as on $\square 3$ ๖ศf ( 1 of King Snefru." This division of the personality of the king will explain the phenomenon that some of the early kings had two pyramids, one will have been the tomb of the king, the other the tomb of his Kía.

Proceeding from these remarks it might be supposed, that the tombs discovered by Amélineau at Abydos are but sham tombs for the Ka of the king destined for the funcral service ; * and that the find helps to prove this idea by the appearance of the Ka name in the texts of these tombs, and their position just at Abydos, in the centre of the divine service devoted to the ancestors, especially of the Pharaohs. I could not agree with these conclusions. Firstly, these buildings are not only found at Abydos, but also at Nagadah, never quoted anywhere as an important place for burial service, and there the one is a real tomb with human ashes. Then the predominence of the K'a name does not permit any further going conclusion, as the systematic distinction between the different king names of the later period did not yet exist at the beginning of Egyptian history.

The Ka name which appears afterwards hardly ever isolated, is there found alone not only in titles relating to its cult $\dagger$ or on

[^34]monuments, which could be in relation with this cult,* but also in rock inscriptionst or even over the representation of a king killing his enemy, on one of the most interesting monuments of the Nagadah period, the ebony tablet of King Den (?), published by Spiegelberg. $\ddagger$ This old custom was mostly given up after the middle empire, only in the XXYIth dynasty, which liked to revive the institutions of primitive Egypt, it occurs again, and on a monument of this time King Apries is followed by his co-regent Amasis, designated only by his Ka name.s

Down to the XIIth dynasty the Kit name and the name behind the ticle, "lord of the two diadems," used to be the same.|| In a series of inscriptions found by Amedineau, of which some have lately been published, the Ka name follows the titles Down to the time of Pepi, the nomen and the prenomen of the kings follow pell-mell the titles even be placed together before one name. That in the old time no distinction between the nomen and the prenomen was made as a rule, is proved also by the fact, that generally the names for the four first dynasties are identical in the king list of Manetho and those on the monuments. In the later time they differ, because the monuments give the prenomen and Manetho the nomen of the Pharaohs. That this is not the case for the beginning shows, that or the sa-ri $\bar{u}$

[^35]name did then not get exist at all, what appears doubtful to me,* or that it was not yet strongly distinguished from the prenomen.

Lastly, in the oldest time not even the cartouche was regularly given to the king's name. Spiegelberg $\dagger$ has quoted there an instance of the time of Snefru, found by Quibell. A parallel to it is found in a flat hemispherical bowl with a diameter of 153 cm ., a height of 5 cm ., of srey spotted white granite, made on the wheel, which I bought in ISSI at Thebes, stated to have come from Erment. On the inside is engraved the inscription 7450100 and 170 in Snefru has no cartouche. Other monuments of the same period have the cartouche, which, at the moment it first appears, has already the form $\checkmark$, so that the pretended original form of the cartouche $Q$ is quite hypothetical. $\ddagger$

On an ivory plate found in the king tomb at Nagadah, § instead of Ahe title apears, in which the place of Nechebit will have been given to the god of Hieraconpolis, a town situated opposite Eileithyiaspolis. The title is not here, as in other places written by itself, but is enclosed in contour lines. On the right and on the left three parallel lines are placed vertically, they unite above with a sloping roof. The whole rests on a horizontal line, which bears also the Kor name of the king. On this line is drawn inside the surrounding lines an arrangement of four contiguous cones,

[^36]through which runs a horizontal line, crossed in the two middie cones by a vertical line. The outline in its idea calls to mind the outline of the Kir name, which represents * the so-called false door of the tomb with the quadrangular plate above it, containing the name of the dead person, or perhaps $i$ the door leading to the mummy chamber, the dwelling place of the Ka, this later room being represented by the rectangle above the door.

It will not appear an improbable guess, that the outline appearing for the first time at Nagadah, may represent in an analogous manner a second dwelling place of the deceased Pharaoh. Firstly, one might quote the two buildings represented at the occasion of the journey to Pe named in the burial ceremonies. $\ddagger$ The first of these has the ordinary house shape, the second a sloping roof. But, as the latter form is always, as far as I know, inscribed in a rectangle and never isolated, this idea appears very doubtful. It will be better to think of the pavilion, in which many examples show the deceased, playing, for instance, draughts, this parilion being side by side with a rectangular building, on which the Ba of the deceased is often sitting. The pavilion is always seen from the side ; if it has a door, this is seen from the front inserted in the front wall, so that the person sitting in the pavilion may not be covered by it. If it was not necessary to show a view into the interior of the building, as in the sign $\frac{0}{\square}$ or in the tomb-pictures, $\S$ the monuments are seen from the front and the door is placed in its centre.

A similar pavilion formed one of the oldest, if not the oldest shape of the Egyptian chapel. $\|$ On the fore side of this building, drawn in side view, we see in the oldest representation the beams passing above the roof, and others standing here horizontally out of the building, probably to offer the opportunity of fixing offerings

\(\ddagger\) Virey, Tombeau de Rekhmara, pl. 21; Tomb of Paheri at El Lab ed.
``` Tylor, pl. S.
§Cf. Maspero, Rec. de trav. rel., etc., II, plate for p. Io7.
|| Petrie, Medum, pl. 9; cf. Mariette, Mast., p. 74, 77. In later time (for instance even Lefébure, Tombeaut de Seti I, I, pl. 31) the "divine dwellıngplace" of Anubis is often written 7 , where the \(\bar{\square}\) of Mar., Mast., p. 77, \(\$ 8,70\), etc., has the form of the outline of our ivory tallet, showing the side view instead of the front view.
upon them. Beneath these beams a small hedge is represented, indicating the closing of the building by palisades.

I think this hedge deserves particular notice, as it appears to be identical with the cone arrangement in our outline, which would then indicate the enclosure placed before this building. I must confess, that seeing for the first time the monument, I had another impression, and tried to recognise in the cones an hieroglyphic sign corresponding to perhaps the later \(山\), which might have pointed to a part of the king's names or title men, and brought to mind the well-known Mená. But the fact that, as yet Lauth * remarked, in the Old Empire and likewise in the Nagadah period the name behind is identical with the Kia name, being here \(\Omega\), and that the sign is here not free within the outline, but placed on its lower end line, compelled me to renounce this idea. \(\dagger\) Nevertheless the similarity with remains, and it is possible that designs like this one gave to the Egyptians an analogous impression, so that they used it afterwards as an ormament in the representations of sarcophagus doors, placing it then over the architrave. \(\ddagger\)

The contour of 4 is till now alone of its kind, Ans being written in historical times without such an ornament. It may have happened here the contrary as with the name of the king: the name stood first alone and afterwards placed in the cartouche, the title lost a similar distinction. Maspero has explained that the cartouche owes its origin to the plates placed beside the door of a prince's house and bearing his names. The outline of the Kír name carries forward the memory of a building belonging to its bearer.
* Manetho, p. So.
+ As far as I can see, this king name is ahways written by \(\rightleftarrows\), its complement sum and a final \(\|\) or \(\Lambda_{A}\). Only on the very late stela, Louvre, Serapcum, nr. 32 S (the cartouche Lells., Aocniush., nr. S78) quoting a priest of the statues of
 space left llank, in which perhaps should have been inserted the ff ; a writing with alone has not yet been found. The determinative of the person given to the name by the lings list of Turin will have only the purpose to distinguish it from the name of the Inevis.
\(\ddagger\) 1.epsius, Aelteste Terte, pl. 9; Maspero in Mém. du Caire, I, pl. 5, 6, 8 ; Marictte, Dend., II, 50, shows only the board. Cf. the strange representation, Mar., Dend., IV, 35.
§ Et. eqytt., II, p. 283 .

Our outline belongs to the same category, pointing to another mansion of the Pharaoh, to his pavilion, which calls to mind in its form the oldest house of the divinity, and also the baldachino, under which the king showed himself to his people. In its picture was written the title of the man to whom it belonged-the name connected with this title being given afterwards in the Ka form, with what it was identical-as well as in the Ka outline and in the cartouche we found parts of his name. That the outline of the title was not pronounced in reading it, would have its parallel in the not pronouncing of the cartouche, as well as for instance in the not pronouncing of the outline in the late writing 解 for alone.

At the beginning of this communication we had to note that the hawk was one of the holy animals of the Nagadah period. Its position above the Kar name of the king confirms this idea. But it is not always alone there, seal impressions on large pot covers found by Amélineau at Abydos bear it, opposite to a standing jackal-like animal in a similar justaposition, as at other places the hawk and the sitting Set animal are found.* It must be noted, however, that elsewhere over the Ka name, but rather, if also not in the series of the king's titles, nevertheless in practical use, as corresponding to

Much has been written about the animal consecrated to Set. After having again examined its different representations, it appears to me the most probable, that it shows a phantastically altered double of the Anubis jackal. From a zoological point of view the figure of the Set animal corresponds to no really existing being, just as in the figures of the Anubis jackal, often very much resembling the Set animal, scientific accuracy is very often wanting. To the ancients the systematic distinction, which we now make between the different species of animals, was not customary. Dog, jackal, and wolf, who are combined in the holy animal of Anubis, are also classed together in the notions of many other nations, and are conceived in their religions in analogous ways, as demons of the

\footnotetext{
* Variants of these seal-impressions give, instead of the jackal, the standing Set animal (de Morgan, Recherches, II, p. 243, sq.). For the interchange of the standing and lying animal, see Mariette, Mast., p. 225.
}
world of the dead or as their attributes.* In this character, as demon of the dead, the fundamental ideas contained in Anubis and Set, are similar. A parallelism between the two may be found also in other points. As well as we find side by side with the jackalAnubis, in the Osiris legend, the jackal drawing the sun boat in the cycle of Rā, we know beside the Set, the enemy of Osiris, a Set connected with Rā as his defender. And, as Horus and Set renresent in their union Upper and Lower Egypt, thus the same idea is expressed by the association of the hawk-headed and the jackal-headed demons, called the spirits of Pe (Buto) and of Nechen, \(\dagger\) to which are devoted chapters \(I_{12}\) and \(I_{3}\) in the Book of the Dead. \(\ddagger\)

A similar allegorical combination of hawk and jackal is found at another place. The drapery of the high priest of Ptah at Memphis shows already in the oldest tombs of Saqqarahs as braces some very singular zigzag lines corresponding to the broken lines often found prainted on the pottery of the Nagadah type. At the ends of the front side the head of a hawk, and opposite that of a jackal are posted. The title of this high priest, "the chief worker," contains a curious parallel to a series of figures of the cyele of Horus of Edfu, to his mesniti-u, "the metal men," as we shall have to think also in the Memphitic title in the first rank of metal work. The dwarf-like Chnumu, who belped Ptah in the creation of the world, appear to enter in the same cycle of ideas. Their deformation, parts of the clothing of Ptah, the fact that the ancients took him as corresponding with Hephaestos, all shows that he and his companions were connected with qualities generally ascribed to the Smiths.|| Un-

\footnotetext{
*See W. II. Roscher, Das aon der "Kynanthropic" handelude Fragment des Marcollus zoze Side, 1. 25, sqq., in the Ahhe der Leipsigir Akad., XVII.
+ Wietemann, Religion of the amient Esyptians, p. 163. Nechen is dechared by Brugsch (Dict. geogr., 1. 352, sq., 1227) and Dumichen (Gisch. Ais., p. 59) to be a sanctuary in or quite near Eileilhyiaspolis; Renouf (Iroc. Soc. Bibl. Arch., XVII, p. 10) identifies it with Ilieraconpolis, situated opposite to El Kab. For Hieracompolis, see Bouriant in the Étudis didiáes à Liemans, p. 35, syq.
\(\pm\) It is noteworthy, that chap. 113, treating of the hawk-headed spirits of Nechen, contains allusions to the legend about the dismemberment of Ilorus (see Renouf, froc. Soc. Fibl. Arha, X'II, p. II), which, as I have exposed in the new Recherckes of de Morgan, is connectel with the custom of the Nagadah period to cut the corpse in pieces.
S. Mariette, Mast., p. 74 . For further examples see Erman, Aeg. Zeitschr., NXXIII, p. 22, sq.

Wiedemann, Merodot's Zwcitis Buch, p. 397, sqq.; Religion of the ancient Esyotians, p. 131, sqq.
}
fortunately, it has been till now impossible to pursue this point of view more at length, as we know very little of the original god Ptah. The later indications of the monuments cannot be used with safety for this purpose, as in these the corruption of the pure idea of Ptah by combination with his neighbour god, Sokaris, and even with Osiris, had already taken place.

The jackal or its god played in all cases an important rôle at the beginning of Egyptian history. He appears several times on sealimpressions and other relics of the Nagadah period, and it is noteworthy in this connection that in the representation of the victory of the kings Den (?), Cheops and Sahura over some people on the eastern frontier of Egypt, a large standard, bearing a standing jackal is posted side by side with the principal scene.* Under these circumstances it is possible that the for which are quoted several times in the Nagadah period, and of which a prophet is known also from a tomb of Saqqarah, \(\dagger\) are Horus and Anubis, and not Horus and Set, as could be supposed by the variant \(\ddagger\)瓜 of the new empire for

In later periods such a combination of two gods would point to a sense corresponding to the idea of uniting Upper and Lower Egypt, as well as the titles found already in the Nagadah period for the king, would then do it. But I do not think that the origin of these titles can be derived from this idea of bipartition of the kingdom. Le Page Renouf referred some years ago to the fact that were at first the titles of the high priests at Coptos and Heracleopolis Magna, \(\S\) and put therefore the king in relation with the divinities of these two towns. A similar idea gave origin to the title as it appears. The former refers to a connection with the vulture, the sacred animal of the goddess Nechebit of Eileithyiaspolis, a centre of the Nagadah civilisation, as the excava-

\footnotetext{

+ Mariette. Mast., p. 104.
\(\ddagger\) Leps. Denkm., III, IS6, 246, a.c. The name of the nomos of the two gods (part of the tenth nomos of Upper Egypt. cf. Diumichen, Gesch. Aef., p. 162, sqq.) refers to Horus and Set.
§ Proc. Soc. Bibl. Arch., XII, p. 358.
}
tions of Quibell at El-Kab have shown. The divinity was already worshipped during the ancient empire also in Lower Egypt.* On refers to the goddess Uat'it, designed nearly everywhere as the mistress of Pe, resp. of Dep, it is to say of Buto, \(\dagger\) a town which was
 several high functionaries at this period \(\ddagger\) attests. It may even be possible to guess from the passage of the pyramid of Pepi I, 1. 684,
 Pe," that it was an old king town, an hypothesis which finds a certain support in the legend of the Horus who came out from Buto to become a king of Egypt. The importance of Buto decreased in the following time, as well as that of other towns in the Delta. We can follow this process still in the cult of the divinities of some of these towns. During the old empire Bast, Neith, and others are very often quoted, and their priestdom is a distinction for the highest functionaries; afterwards this ceases, to be revived again only in the Saïtic time, when the Delta again became most important in the history and development of Egypt.

In general Nechen and Pe are considered to be the two coronation towns of Egypt, and still at Esneh a divinity says: "I give to thee (the king) the white crown at Nechen, the red crown at Pe, " and the title is referred to this fact. But strangely enough the two symbols which the title literally indicates are not the two crowns \(5 /\) and \([\sqrt{6}\), but the vulture and the ureus, and of these two the king bears only the latter, the former being reserved for the queen, \(\|\) the best proof that the double crown in the latter definition was not alluded to in all times by the title.
* For instance, Mar., Mast., p. 303. For the relation of primitive Egypt with Libya it may be noted in this context that the Barkeans in Libya took the vulture to be a holy animal (Aelian, Hist. Anim., X, 22).
\(\dagger\) See for the town, lirugsch, Dict. geogr., p. 17S, 213, sqq., II54, sqq. ; for the goddess, Lanzone, Diz. di mit., p. 179, sq.
\(\ddagger\) Mar., Mastaba, p. So, Voy. dans la Haute Esypte, pl. ı6; Petrie, Medum, pl. io, etc.
\$ Brugich, Dict. srear.., p. 354.
|| Wiedemann, in the Mutséon, XIII, p. 375, sqq. About the historical development of this title and its reading smauth, uniter of the two Egypts, proposed by Erman, Aeg. Zeitschr., XX1X, p. 57, I shall have to speak more in detail at another time.

At all events it appears to me that from the appearance of these titles in the Nagadah period we can gather only the one fact that the kings of this time liked to be considered as beings in relation with the divinities or rather the cult of the divinities of Edfu, Eileithyiaspolis, Koptos, Heracleopolis Magna, Buto, and a town devoted to the jackal god or to Set, but not that the titles have to be taken already in this time in the sense of the public law of the later periods. For such an explanation the proof would be wanting.

The practical consequence remains untouched by these considerations. The king may have obtained his titles through motives of civil law or through religious deductions. In all cases he intended from them to be considered as the master of whole Egypt ; and as the kings bear them in the Nagadah period, this shows that already the whole country, or at least by far the largest part, was in the hands of one monarch. But it is another question whether on ground of the existence of these titles we have a right to date all monuments bearing them in the time after Menes, that is to say after the beginning of the first dynasty of Manetho. It is true that in modern works Menes is the first king of the first dynasty, and the uniter of Egypt out of its two prehistorical parts. For the old Egyptians he was indeed the oldest entirely human king of whom the compilers of the kings' list at the beginning of the New Empire had any knowledge, but he is not the first who, according to their opinion, bore the title sidered to denote the king of Upper and Lower Egypt, and out of which modern authors have derived the idea of his unification of the kingdom. In the most complete of these lists, in the Royal Papyrus of Turin, the gods who precede Menes bear the same title in the same way, so that the restorers of Egyptian history, after the expulsion of the Hyksos, on the assertions of whom our knowledge of the oldest time to a large amount rests, assumed their country to have been already united in the time before the beginning of the so-called first dynasty.

Another point, upon which Sethe * relies to prove that the relics of the Nagadah civilisation date from the end of the Ist dynasty, consists in the fact, that a fragment of a vase discovered by Amélineau at Abydos, and communicated by him to Mr. Erman,

\footnotetext{
* Aeg. Zeitschr., XXXV, p. 2, sqq.
}
contains a king name appearing to be identical with that of the King Miebaïs of Manetho (the identification of a second king name with Usaphais, reposing on!y on the bypothesis, that the later Egyptians misread the old name ; it is not possible to draw conclusions out of this monument). But, as far as I see, the proof is wanting that the first monument came out of the tomb of the king it quotes. It might be a votive gift, which may be of more recent date than the tomb itself. That the tombs found by Amélineau contain in fact such votive gifts, is proved by a magnificent cup of granite, \({ }^{*}\) discovered in the tomi) of the king with the Kia name \({ }_{11}\). I owe the knowledge of this piece to the happy finder, and would like to express at this place to M. Amélineau my sincerest thanks for the friendly and kind way in which he showed me the most valuable and interesting collection he brought back from his latest expedition, and authorised me to publish this document. The vessel shows in a vertical line the inscription \(\square 8\)是 period. It need not be pointed out how valuable the light is, thrown again by this discovery of Amélineau on the civilisation of this time. The political title as well as the religious title 3, used for a priest of the Sun, \(\ddagger+\) especially already at the beginning of the IVth dynasty, \(\S\) at Heliopolis, are quite new for the period. For the moment the essential thing is, that the place where this cup was found shows, that all the objects found in these king tombs do not belong to the Pharaoh himself, but that some of them are offerings, which need not necessarily give exactly the date of the tomb, but only a terminus quo or ante quem it was performed.

One of the most puzzling customs of the Nagadah period was the decapitation of the deceased. I have tried in another

\footnotetext{

§ For instance I'ctrie, Medum, pl. 1 o.
}
place * to explain that the remembrance of this ceremony did not disappear completely in later times, although I was unable then to bring forward an example which could indicate that it was really then performed, if only exceptionally. But in a passage \(\dagger\) overlooked by myself, Macalister describes between a longer series of mummy-heads he had occasion to examine the following, about the finding place or age of which he unhappily gives no indication: 'One head had been cut off completely through the first cervical vertebra, and a stick of sycomore wood, smeared with asphalte, had been driven up into the head to peg it to the spine of the body. The head had been cut off for me low down, and so well had the bandages been applied that it was not until we had stripped them off that we dĕtected the pre-sepulchral decapitation."

As it will be not likely that in this case we have a criminal who was first decapitated and afterwards embalmed in an honourable manner, it will be necessary to declare the mummy to be that of a man to whom "the head was restored after it had been cut off," \(\ddagger\) that the old ritual of Nagadah was fulfilled on him, but that after its termination the body was made complete again and embalmed according to the Osiris ritual.

It would be worth while to examine the so-called re-made mummies to see if they show only the damages occasioned to the finished mummy by grave-robbers, or if on the contrary it is distinctly evident that the decapitation took place sometimes before the body was prepared for burial. The decapitation of the body might have been done with good intentions, in order to make it easier for the man to enter into the other world, but on the other hand it might also have had the egoistic purpose cf rendering it difficult for him to return as a ghost. Here, as elsewhere, in the judgment about Egyptian funereal ceremonies, it is necessary not to forget that they wished not only to be useful to the deceased, but also to protect the living, as is similarly the case with all simplyfeeling people. Already some time ago the fact has been noted that the so-called false mummies were intended to deceive the dead. Visiting the grave and seeing the linen cloth in the coffin, it was intended that he should think that his mummy still existed, lest

\footnotetext{

\(\dagger\) Notes on Esyptian Mummies in Journal of the Anthrofological Institute of Great Britain, XXIII. London, 1S94, P. 116
\(\ddagger\) Book of the Dcad, chap. 43, 1. 1.
}
he should avenge its loss on living people. An analogous feeling may have existed and prompted the restoration of the corpse after it had been decapitated. Seeing the body the spirit of the dead person considered it to be complete, and remained well intentioned towards those who buried him, but if he tried to vivify it so as to go about in this world, that was made impossible, his head would fall down and he had lost the capacity of again having a human form. Taken from this point of view, the decapitation of the dead offers a complete parallel to the treatment of the body in the countries in which the belief in vampires has remained in its old strength, and gives a new proof to the fact that the manner of thought remained the same from the oldest times of which history knows down to our days.

}
rétablir l'ordre des faits et la physionomie de la bataille. Les
 Khanensou," et les deux flottes se mêlent. Lorsque la bataille est perdue, les restes des Egyptiens se sauvent par le fleuve dra

 main à laube, les Ethiopiens les suivent par la même voie bas an lild Zaou-ne-manfou ne-honou-f, et la bataille s'engage de nouveau. Il résulte de là: \(\mathbf{I}^{0}\) que l'endroit considéré par les Egyptiens comme étant \(\mathbb{C B}\) - l'avant de Khanensou était sur le Nil en avant de Pipouga, et assez près de ce lieu pour qu'on pût \(y\) arriver le même jour après la bataille ; \(2^{\prime \prime}\) que Pipouga était sur la rive gauche du Nil et auprès du fleuve, puisqu'on pouvait aborder团 m-haou dans son voisinage immédiat. Or ce dernier trait suffit à écarter le site moderne d'el-Beky. El-Beky البكى est en effet, non point sur le Nil, mais sur le Bahr-Yousouf, à dix ou onze kilomètres du fleure, comme on le verra aisément en consultant la carte à grande échelle de la Commission d'Egypte.* L'identification de Brugsch, convenable si l'on ne considére que la similitude des noms, devient donc impossible, du moment qu'on fait entrer en balance les circonstances du récit.

Je veux essayer de montrer ce que les Egyptiens entendaient par l'avant de Khanensous a placement de Pipouga. Brugsch a fort bien montré que le terme Ķ - khonît, signifie l'ar'ant d'un objet quelconque, sa partie extrême, et qu'appliqué à un territoire, il en désigne le commencement, \(\dagger\) surtout le commencement vers le Sud, du côte où les Egyptiens s'orientaient. Or, le commencement du nome Héracléopolitain au Sud, direction d'où venait l’arméc éthiopienne, est assez aisé à marquer sur la carte de façon générale. Ce nome, compris entre le Nil, le BahrYousouf, et des canaux qui réunissaient les deux bras principaux du fleuve, formait une sorte de grande ile, et les géographes grecs,

\footnotetext{
* Description ác l'Esypte, Atlas, f. 16.
+ Bugssh, Dictionnare Hićroslyphique, Suftiómont, p. 947.
}

Strabon et Ptolémée, le définissent une île.* Jomard, qui avait étudié la question sur les lieux, plaçait la pointe méridionale de l'île à Harabshent, et il considérait le canal d'Harabshent comme délimitant le côté sud. \(\dagger\) L'aviant de Khanensou, ou, si l'on préfére, le commencement de Khanensou héracléopolitaine commençait, soit vers Harabshent, et peut-être la dernière partie du nom actuel, qui n'a rien d'arabe, renferme-t-elle ce terme de Prash \(p\)-khenti=b-shent. Pi-pouga, situé un peu audela du commencement de Khancnsou, doit donc se trouver dans l'île même, près de la rive, à petite distance au Nord d'Harabshent, et de fait, je rencontre sur la carte, à deux kilomètres de ce point, un bourg d'el-Fukâi الill, qui répond fort bien aux conditions du récit. Le \(\Gamma_{1} p_{i}\) initial est tombé, ce qui arrive fréquemment dans les transcriptions arabes, ainsi dans Tell-Bastah pour Bou-bastis ■ (1) Ici d'ailleurs la chûte n'est peut-être qu'apparente, et il est probable que l'article \(ل l\) el répond au \(p i\), égyptien confondu avec

 s'explique par une étymologie populaire, qui aura déduit le nom

Je placerai donc le lieu de la première bataille sur le Nil, un peu au Sud et en vue d'Harabshent, celui de la seconde et le site de 두 Pi-pousa à El-Fokâ.
\$32.-L'inscription de l'Obélisque raconte que, "dans l'an Xème de son règne, pour la huitième fois, Salmanasar III passa l'Euphrate. Je m'emparai des villes de Sangar de Gargamish; je m'avançai vers les villes d'Aramé, je m'emparai d'Arné, sa ville royale, et de cent de ses villes. Dans la onzième année de mon régne, pour la neuvième fois, je passai l'Euphrate, je m'emparai de villes sans nombre. Je descendis vers les villes du prince du pays d'Amat, je m'emparai de quatre-vingt-neuf villes. Dadda-idri, roi du pays

\footnotetext{
* Strabon, XVII, I, § 35, p. Sog; Ptolémée, Georr., I, l. iv, p. 120.
\(\dagger\) Jomard, Description de l'Heflanomide, Son IV, dans la Description de l'Esyple, t. III, p. 400-402. Il songe aussi au canal de Bibéh, qui est à quelques kilomètres au Nord, mais il préfére celui d'Harabshent (ifr. p. 420).
}
d'Imérîshou, et douze rois du pays de Khatti se rangèrent aux côtés les uns des autres: je les défis." * Les historiens ont admis jusqu’à présent qu'il s'agissait ici d'Aramé Ourartaya, d'Aramé l'Ourardien, et que la seconde partie de la campagne entreprise par Salmanasar en lan X de son règne avait eu pour théátre une partie quelconque de l'Arménie. \(\dagger\)

Les mêmes érénements sont racontés dans l'Inscription des Taureaux, mais avec des particularités qui ont excité l'attention de la critique. Les deux campagnes de l'an X et de l'an XI y sont décrites de telle façon qu'elles paraissent avoir eu la même marche du commencement jusqu'à la fin, et n'etre qu'un doublet l'une de l'autre dans la plupart de leurs détails:
An X.

An XI.
Dans la \(X^{e}\) amnée de mon règne,
pour la huitième fois je franchis l'Euphrate.
Je renversai, détruisis, livrai aux flammes les villes de Sangar de Gargamish.
Je quittai les villes du roi de Gargamish, je m'avançai vers les villes d'Aramé. Je m'emparai d'Arné, sa ville royale, je la renversai, la détruisis, la livrai aux flammes avec \(\mathbf{1 0 0}\) villes des alentours.

Dans la \(\mathrm{XI}^{e}\) année de mon règne, je partis de Ninive, pour la neuvieme fois je franchis l'Euphrate dans son plein. Je m'emparai
de 97 villes de Sangar.
An X. An XI.

Alors Dadda-Idri, roi du pays d'Imérishou, Irkhoulini du pays d'Amat, avec douze rois du littoral de la mer, se confièrent mutuellement dans leurs forces et se jetèrent à ma rencontre pour me lisrer combat et bataille. Je combattis avec eux et leur infligeai une défaite.

Je leur pris leurs chars, leurs chevaux, leur matériel de guerre: pour sauver leur vie, ils gagnèrent la montagne.*

Alors Dadda-idri, roi du pays d'Imérishou, Irkhoulini du pays d'Amat, avec douze rois du littoral de la mer, se connièrent mutuellement dans leurs forces et se jetèrent à ma rencontre, pour me livrer combat et bataille. Je combattis avec eux et leur infligeai une défaite: je fis tomber sous mes armes 10,000 de leurs soldats. Je leur pris leurs chars, leurs chevaux, leur matériel de guerre.
A mon retour, je m'emparai d'Apparazou, ville forte d'Aramé. Je reçus alors le tribut de Garparoundi, le Patinien, de l'argent, de l'or, de l'étain, des chevaux, des bœeufs, des moutons, des étoffies de lin.
Je gravis l'Amanus et j'y coupai des madriers de cédre. \(\dagger\)

Le texte actuel de la campagne de l'an X contient un membre de phrase, je leur tuai du monde et leur pris du butin, qui ne se raccorde pas logiquement à celui qui le précéde. Un coup d'ceil sur la partie correspondante de la campagne de l'an XI montre qu'il appartenait originairement à un épisode qui a été enlevé: le scribe, en retranchant les lignes relatives à litinéraire et aux progrès de l'armée assyrienne, a respecté maladroitement la mention du carnage et du butin qui les complétait. Les faits relatifs au retour de Salmanasar, après sa recontre arec la ligue damasquine en l'an XI, ont été supprimés dans la version que le Taureau No. 2 donne de cette campagne, et cette omission augmente encore la ressemblance qu'on remarque entre le récit des deux expéditions. Il est évident que le scribe qui avait rédigé la chronique écrite sur les deux taureaux a reproduit deux fois l'histoire des mêmes faits

\footnotetext{
* Inscriftion du Taureau No. I, 1. 29-34.
\(\dagger\) Inscription du Taureau No. I, 35-41.
}
sous deux dates différentes. Son erreur a été reconnue par les historiens modernes, et ils admettent, à l'exemple de Tiele, qu' "il a pris deux rédactions diverses du même document, qui comprenait deux années de guerre, pour deux documents comprenant chacun une année de guerre différente, et qu'il les a mis bout à bout." Il faut en ce cas, pour corriger cette inadvertance, se laisser guider par le texte de l'Obélisque, reléguer sous la date de l'an X la campagne contre Sangar et contre Aramé, et ne considérer comme ayant appartenu à J'an XI que la campagne dirigée contre la ligue damasquine.*

On ne saurait douter que le rédacteur de l'inscription des taureaux n'ait reproduit deux fois de suite le même récit, mais son erreur porte-t-elle sur la première partie, celle qui raconte les mésaventures de Sangar et d'Aramé, comme le veut Tiele, ou porte-telle sur la seconde partie, celle qui raconte le choc entre Assyriens et Damasquins? Prenons les deux notices de l'Obélisque et des Taureaux, puis comparons-les l'une à l'autre. Voici d'abord pour l'an X:

Obélisque.
Dans la \(\mathrm{X}^{\mathrm{e}}\) année de mon règne, pour la huitième fois, je franchis l'Euphrate.
Je m'emparai
des villes de Sangar de Gargamish.

Je m'avançai vers les villes d'Aramé. Je m'emparai d'Arné, sa ville royale,
et de 100 de ses villes.

\section*{Taureaux.}

Dans la \(\mathrm{X}^{\mathrm{e}}\) année de mon règne, pour la huitième fois, je franchis l'Euphrate.
Je renversai, détruisis, livrai aux flammes les villes de Sangar de Gargamish.
Je quittai les villes du roi de Gargamish, je m’avançai vers les villes d'Aramé. Je m'emparai d'Arné, sa ville royale, je la renversai, la détruisis et la livrai aux flammes avec 100 villes des alentours.
Je leur tuai du monde, je leur pris du butin.
Alors Dadda-idri, roi du pays d'Imérishou, Irkhoulini, roi du pays d'Amat, arec douze rois du littoral se confièrent mutuellement dans leurs forces, etc.

\footnotetext{
* Tiele, Babylonisch-assyrische Geschichte, p. 201-202.
}

Le récit des taureaux est, en ce qui concerne Sangar et Aramé, identique à celui de l'Obélisque: il n'en diffère que par quelques fleurs de rhétorique assyrienne, intercalées entre les mots nécessaires à l'exposition sommaire des faits. Mais, à partir de la phrase Je leur tuai du monde, etc., l'Obélisque ne présente plus l'équivalent du texte des Taureaux. Or, une guerre avec les Damasquins était trop importante pour être passée entièrement sous silence, surtout une guerre heureuse, comme celle que l'inscription des Taureaux ajoute en cet endroit. Il est donc certain que le scribe s'est trompé, et qu'il a mis en l'an \(X\) une partie des évenements de l'an XI.

Passons maintenant à la campagne de l'an XI et confrontons les deux récits qu'en donnent l'Obélisque et les Tauraunx, de la même manière que nous avons fait pour la campagne de l'an X .

\section*{Obélisque.}

Dans la \(\mathrm{XI}^{\mathrm{e}}\) année de mon règne, pour la neuvième fois, je franchis l'Euphrate

Je m'emparai de villes sans nombre ; je descendis aux villes du Khâti
et du prince d'Amat; je m'emparai de
89 villes.
Dadda-idri, roi du pays d'Imérishou,
et douze rois du pays de Khatti, se rangèrent aux côtés les uns des autres:

Taureaux.
Dans la \(\mathrm{XI}^{\mathrm{e}}\) année de mon règne, je partis de Ninive, pour la neuvième fois, je franchis l'Euphrate en son plein.
Je m'emparai de 97 villes de Sangar; je m'emparai de roo villes d'Aramé, je les renversai, les détruisis, les livrai aux flammes.
Je pris le long de l'Amanus, je franchis la montagne d'Yarakou, et je descendis aux villes du prince d'Amat; je m'emparai d'Ashtamakou avec 99 autres villes; je leur tuai du monde e leur pris du butin.
Alors Dadda-idri, roi du pays d'Imérishou, Irkhoulini du pays d'Amat, avec douze rois du littoral de la mer, se confièrent mutuellement dans leurs forces et se jetèrent à ma rencontre, pour me livrer combat et bataille. Je combattis avec eux et leur

\section*{Obélisque.}
je leur infligeai une défaite.

\section*{Taureaux.}
infligeai une défaite: je fis tomber sous mes armes 10,000 de leurs soldats. Je leur pris leurs chars, leurs chevaux, leur matériel de guerre.
A mon retour, je m'emparai d'Apparazou, ville forte d'Aramé, etc.

Ici, on le voit, le récit de la guerre contre Sangar et Aramé, tel quill est domé par l'inscription des Taureaux, trouve son équivalent sur l'Obélisyue; les 97 villes de l'un et les 100 villes de l'autre sont les zilles sans nombre dont Salmanasar s'empara, après avoir franchi l'Euphrate et avant de descendre aux rilles du prince d'Amat. Ce début de campagne n'est pas, somme toute, plus abrégé que le récit de la bataille livrée à Dadda-idri. Il y a done là trois moments, distingués nettement sur les deux documents: \(\mathrm{r}^{\circ}\) prise de villes (Sangar et Aramé) du pays des Khati, entre les gués de l'Euphrate et la frontière d'Amat; \(2^{0}\) succès dans le pays d'Amat (Amanus, Yarakou, Ashtamakou); \(3^{\circ}\) bataille entre les Assyriens et les Damasquins; l'inscription des Taureaux ajoute \(4^{\circ}\) au retour, une razzia contre Aramé, le tribut de Garparoundi, une pointe vers l'Amanus pour couper des cédres. En résumé, la campagne de l'an XI renferme des opérations contre Sangar et contre Aramé comme celle de l'an X , et, de plus que celle-ci, des opérations contre la ligue damasquine. Le scribe a été trompé par la récurrence des mêmes noms d'Aramé et de Sangar sous les deux dates consécutives, et il a appliqué à l'an X le récit complet des événements de l'an XI. Son erreur ne provient donc pas, comme on le pense généralement, de ce qu'il a pris les deux versions d'un document, contenant le récit des événements de deux années, pour deux documents différents contenant chacun le récit d'une année. Elle résulte plutôt de ce que deus années consécutives lui offraient le même enchaínement de combats livrés contre les mêmes ennemis: il a été entrainé à répéter deux fois la mention de la bataille contre Dadda-idri, parce qu’il trouvait deux fois la mention d'Aramé et de Sangar en l'an X et en l'an XI. Sa faute n'est pas d'avoir mené Salmanasar deux fois de suite contre Aramé et contre Sangar, mais de l'avoir opposé deux fnis de suite à lladda-idri.

Ainsi, en l'an X, campagne contre Sangar et contre Aramé, puis
retour à Ninive; en l'an XI, campagne contre Sangar et contre Aramé, puis invasion en Amat et bataille avec Dadda-idri, puis au retour, collision nouvelle avec Aramé, tribut de Garparoundi, visite à l'Amanus: voila le sommaire des événements pour deux ans. La suite des faits s'explique-t-elle naturellement si l'on admet qu'Aramé est le roi d'Ourartou? Non certes, car en l'an XI, on ne comprendrait pas les mouvements d'une armée qui, ayant passé l'Euphrate et ayant pillé le royaume de Carchémis, se trouverait ensuite en Arménie sur le territoire d'Aramé, reparaîtrait aussitôt après aux bords de l'Oronte pour y triompher de la ligue damasquine, puis au retour pillerait une nouvelle ville d'Arménie, Apparazou, y recerrait le tribut du prince de Patinou, et s'en irait d'Arménie abattre des cédres sur l'Amanus, avant de rentrer à Ninive. Les mouvements sont trop décousus, et les localités trop dispersées, pour qu'on puisse se contenter de l'explication courante. Cet Aramé, dont on pille les états après ceux de Sangar le Gargamishien à l'aller vers Amat, dont on quitte le territoire pour monter dans l'Amanos et dans les domaines du prince d'Amat (Hamath), qui est assez voisin du Patinou pour que le pillage d'une de ses villes décide Garparounda à payer tribut, il doit être un prince syrien différent d'Aramé, le roi d'Ourartou, et, de fait, l'histoire de cette époque nous fait connaître un second Aramé, Aramé prince d'Agousî, qui paya tribut à Salmanasar en l'an I* en l'an VI, \(\dagger\) et qui lui fit de nouveau la guerre en l'an XXV. \(\ddagger\) Il me parait difficile de ne pas reconnaître ce personnage dans l'Aramé des campagnes de l'an X et de l'an XI .

L'Agousî ou, par chûte de l'oleph initial, le Gousî, était un des États aramées qui prennent leur nom soit de l'éponyme de la tribu, soit du fondateur de la dynastie: son sobriquet de Bit-Agousî n'empêchait pas le nom réel, Iakhanou, Akhanou, de subsister dans la mémoire du peuple.§ Le site de cette localité n'a pas été fixé exactement sur la carte: Schrader se contente de dire qu'il est entre l'Amanus et l'Euphrate, Tiele près de l'Amanus, \(\|\) Delattre, aux sources du Karasou et de l'Afrinn; © Hommel répète à son sujet les

\footnotetext{

}
termes même dont se sert Schrader,* Winckler enfin lui donne Arpad pour capitale dès le temps de Salmanasar II, \(\uparrow\) t et Rost le fait limitrophe du Samalla. \({ }_{\text {+ }}\) La façon même dont les textes de Tiglatphalazar III parlent de l'Agousî donnent raison à Winckler: Arpad était dans l'Agousi. Je crois même que l'analyse des inscriptions nous permet d'indiquer une partie des frontières du pays au temps d'Assournazirabal et de Salmanasar III. Assournazirabal, parti de Gargamish, passe entre les monts Mounzigani et Khamourgâ, illaisse sur la srauche le pay's d'Akhanou, et s'approche de Khazaz, ville du Patinou, puis, allant toujours de l'avant, il franchit l'Aprî, établit un camp fortifié, s'approche de Kounouloua, la ville royale de Loubarna, roi du Patinou, la force et reçoit sous les murs de cette cité le tribut de Gousî, prince d'Iakhanou; il traverse enfin l'Oronte.§ Pour aller de Carchémis à Khazaz, Assournazirabal a suivi la route actuelle de Djêrâbis à Azzâz, telle qu'est marquée sur la carte de Key, par Zembour, Karageuz-keui, Ayash, Tatar-keui, Taibouk. Les monts Mounzigani et Khamourgâ, entre lesquels il chemine, doivent être les rangées de collines basaltiques basses qui commencent au-delà du Sadjour entre Karageuz-keui et 'Tel-Ar, \| et qui donnent à cette partie de la contrée un aspect caractéristique. C'est au sortir de cette région, soit vers Tatar-keui, qu'il laisse sur sa gauche, c'est-àdire, au Sud de sa route, le pays d'Iakhanou, pour pousser droit à Khazaz: c'est en effet entre Tash-euyuk et Tatar-keui que la route de Khazaz se détache de celles qui ménent à Alep, et, dans l'antiquité, à Arpad. De ces diverses observations, on peut déduire les points suivants: \(\mathbf{I}^{0}\) Khazaz étant la première ville du Patinou, et Assournazirabal n'indiquant aucun changement de souveraineté avant cette ville, les Assyriens marchèrent jusqu' auprès d'elle sur le territoire de Gargamish, et, en fixant la frontière des deux États, Gargamish et le l'atinou, vers le Kowéik, on ne risque guères de se tromper beaucoup; \(2^{0}\) Assournazirabal, laissant sur sa gauche le Iakhanou, entre Tatar-keui et Azzaz, on ne risque pas non plus de se tromper beaucoup en plaçant la frontière du royaume de Gargamish et celle du Iakhanou sur une ligne tracée à faible distance de la route, par Kayíbéh, Turkman-keui, Taboût, Djilbrin, Kefer-Khasse ;

\footnotetext{

1. Sachau, Reise in Syrien, p. 454.
}
bien entendu, je cite ces localités pour donner la direction générale de la ligne, sans prétendre que la limite passât exactement par aucune d'elles. L'Agousî confinait donc vers le Nord-Est à la principauté de Carchémis, vers le Nord-Ouest à celle de Patinou. La proximité de l'Afrîn rend probable qu'à l'Ouest cette rivière servait de limite au Patinou et au Bit-Agousi sur une petite partie de son cours, jusque vers Tell-Berki ou Remadi, puis, de l'un ou l'autre de ces endroits, une ligne arbitraire tirée du fleuve et filant quelque part entre Alep et Tourmanîn. Somme toute, le Bit-Agousî répondait en gros à la Chalybonitis des temps gréco-romains.

Si ces conclusions sont admises, on comprendra mieux le rôle important qu'Arpad joue pendant le VIIIe siècle. Sa puissance ne serait pas née vers l'époque de Rammânnirari, comme on l'a cru le plus souvent, mais ellc était déjà en pleine floraison un siècle plus tôt, sous Assournazirabal. La principauté à qui elle servait de capitale, l'Agousî, était, ce que fut Alep beaucoup plus tard, la clef de la Syrie Septentrionale, et elle résista presquc aussi longtemps que Damas aux attaques répétés des Assyriens.
§ 33.-Dans sa vingt-troisième année, Salmanasar III franchit l'Euphrate pour la vingt et unième fois et descendit au Tabal. Il y reçut le tribut de vingt-quatre rois, puis il se rendit au mont Tourat, une montagne d'argent, une montagnc de moulou, une montagne de pierre shamoulli (gishshirgal).* Le nom de la montagne est écrit de façon ambigue: le signe initial tou, est tracé à le fin de la ligne 106 , et le signe final \(-Y Y\) rat, au lieu d'être reporté sur la même face au début de la ligne 107 , se lit en retour, sur la face \(C\) de l'Obélisque, au début de la ligne 134, séparé du texte de cette ligne par un trait vertical. \(\dagger\) C'est ce qui explique que, chez plusieurs assyriologues, et notamment chez Winckler, \(\ddagger+\) le nom soit donné comme incomplet, Tou

Je ne trouve dans la région cilicienne aucun nom de montagne qu'on puisse rapprocher de celui que le texte assyrien a conservé, mais le renseignement qui nous est fourni sur les produits du sol peut nous servir à fixer la localité : où nous trouverons deux carrières de pierre rare et une mine d'argent, là sera le Tourat. Une seule chaîne réunit ces conditions, dans les régions où Salmanasar III nous méne,

celle qui domine au Nord la plaine de Marash. "On connait aussi à Marach, dit Vital Cuinet,* wne mine dargent et une mine de fer non exploitées, et denx belles carrières, l'une de marbre rose, l'autre de marlve noir:" Et il répéte la même assertion un peu plus loin: "Une autre mine de fer est connue ainsi qu'une mine d'argent, mais elles ne sont pas exploitées. Il y a aussi dans les environs une carricure de beau marbre rose ct une autre de marbre noir." \(\dagger\) Le mont Tourat serait donc l'Aghir-dagh, le Kour-dagh, le groupe de montagnes où Cuinet signale la mine d'argent et les dẹux carrières: Salmanasar, après avoir parcouru une partie du pays des Tabal, se serait rabattu sur Marash, par la vallée du Pyramos, et il aurait regagné l'Euphrate par la plaine de Bazardjik.

Les deux espèces de pierre mentionnées dans le texte assyrien seraient donc l'une un marbre rose, l'autre un marbre noir.
\(\$ 34\). La stèle C 55 du Louvre, dont l'inscription nous donne le type d'une des formules les plus intéressantes du Nouvel-Empire, contient le passage suivant: \(\left.\cap_{\Delta}\right]\) fis \(\frac{1}{2}\) Lo rafraichisse sous mes sycomores, que je mange les fruits de leurs branches," \$ ou "May I refresh my face beneath my sycamores, may I eat bread of their gizing." J| J'aurai occasion d'analyser ailleurs les procédés de composition employés par le rédacteur de la formule, et je me bornerai à dire ici, sans insister, que les deux membres de phrase cités se rattachent au membre de phrase précédent: " mon âme se pose (ou plane) sur les branches du jardin que je me suis fait, et je me rafraichis sous mes sycomores, je mange des pains qu'ils donnent." Je ne veux interpréter pour le moment que le sens religieux du passage.

Il rappelle immédiatement une seène qui est figurée souvent sur les peintures des cercueils et des papyrus funéraires. Le mort, arrivé aux confins de la terre cultivée et du désert, rencontre un sycomore des branches duquel la déesse Nouît, ou une déesse

analogue, Hâthor surtout, jaillit pour lui tendre, d'une main, un plateau chargé de pains, de gâteaux et de fleurs, de l'autre un vase à libations regorgeant d'eau fraîche. Le mort qui buvait et mangeait, devenait le féal de la déesse, et désormais, selon une idée commune à beaucoup de peuples, il ne pouvait plus quitter le service
 des dieux de l'autre monde auquel il s'était attaché de la sorte, pour reprendre sa place sur terre parmi les vivants.* Les variantes graphiques du tableau sont nombreuses. Le plus souvent la déesse est figurée debout dans le feuillage de l'arbre, óu sortant à mi corps du tronc et des rameaux ; quelquefois un corps humain est le tronc même d'où les branches jaillissent, comme c'est le cas sur un beall sarcophage d'époque saite, conservé au Musée de Marseilie ; † plus souvent le bras divin est seul visible et parait au-dehors du tronc pour y rentrer aussitôt, de la même manière que les têtes ou les bras qui sortent des haches, des caisses et des divers objets animés qui sont figurés en si grand nombre au Lidre de sazoir ce qu'il \(y\) a dans l Hadès. \(\ddagger\)

Ce premier goûter symbolique, le mort s'attendait à le renouveler aussi souvent qu'il lui plairait dans l'autre vie, et les tableaux peints ou sculptés dans les hypogées thébains le montrent souvent assis, accroupi ou debout auprès de son bassin, devant ou sous un sycomore d'où la déesse lui tend un vase ou un plateau. L'ensemble des détails prouve qu'alors on a voulu le représenter, non plus aux limites des deux mondes, mais sur notre terre, dans son jardin qu'il visite et où il vient s'abattre à volonté pendant le jour. Ainsi, dans

\footnotetext{

}
le tableau copié par Rosellini,* le sycomore est posé auprès d'un de ces bassins en T, encombrés de plantes aquatiques et peuplés d'oiseaux et de poissons, qui se rencontraient dans la plupart des villas égyptiennes. Les exemples de cette scène sont si nombreux et si connus qu'il me suffit d'avoir cité celui-là, pour que tous ceux qui ont vu ou étudié les tombeaux de Sheikh Abd-el-Gournah se les rappellent aussitôt.

Le texte dn passage cité de la formule doit donc être pris au pied de la lettre et interprété matériellement, comme dans la plupart des cas où nous voulons comprendre exactement la pensée des Egyptiens. Le mort, une fois installé dans ce jardin funéraire qu'il s'était préparé lui-méme, pouvait s'y rafraîchir à volonté sous ses propres sycomores, à l'eau que la déesse cachée dans leur tronc lui versait, et s'y rassasier aux pains que ces arbres lui donnaient sur le plateau que la déesse lui tendait. Le sycomore avait été choisi à cause de son ombre et de ses figues, et pour les raisons naturelles que j'ai exposées ailleurs. La déesse qui animait chacun d'eux n'était pas toujours visible dans la ramure, mais le mort, quand il désirait la voir paraître avec ses provisions, devait l'évoquer en prononçant la prière qui avait pouvoir sur elle. Elle sortait alors, entière ou en partie seulement, puis, sitôt qu'il avait eu d'elle ce qu'il souhaitait, elle rentrait dans sa demeure, et son arbre la résorbait ou, pour employer l'expression brutale qu'affectionnaient les scribes en pareil cas, il la mangeait. \(\dagger\)
§35. Le sens général de l'expression \({ }^{\text {Q }} 1\) est connu depuis longtemps, et on la traduit par à-peu-près, Salut à toi . . . , Hommage à toi . . . . , Honneur à toi . . . . , et autres formules analogues, qui suffisent dans la plupart des cas. J'en ai donné, à diverses reprises, depuis vingt ans, dans mes Cours du Collége de France, une explication que je n'ai point publiće, et que je ne me rappelle avoir rencontrée nulle part.

La locution est formée du verbe 中 et du substantif \({ }^{9}\). Le

§ 7iti, 1. 278.
nz. Le signe lui-même est, ainsi que M. Soldi l'a bien vu,* non pas un maillet, mais un foret, l'instrument à frotter ou à percer le bois, par suite à faire le feu : il est composé de la tige centrale qui agit, et de la corde qui manœuvre la tige \({ }^{1 / 4}\). Le verbe qui est écrit par cet instrument peut donc répondre au sens percer, si l'on considére une des actions du vilbrequin, au sens frotter, si l'on considére une autre de ces actions, le frottement sur le bois et l'inflammation qui en résulte: il faut, pour choisir entre les deux, chercher un autre emploi du mot qui ne laisse pas prise au doute. Or \(\overbrace{}^{2 m} \mathrm{Nz}\) veut dire également, ainsi qu'on le sait depuis longtemps, broyer,
 noest \(T\). \(\Pi\), \(\Pi\), furina, nort \(T . \Pi\), mola, et cet emploi du verbe oblige à préférer le sens écraser, ou plutôt le sens frotter. Il convient en effet, si l'on veut préciser la nuance, de se rappeler comment les Egyptiens procédaient pour se procurer la farine. I'ouvrier, presque toujours une femme, étalait quelques poignées de grains sur une pierre oblongue, qui offrait une surface concave inclinée légèrement, puis il les écrasait avec une pierre plus petite, en forme de molette, qu'il mouillait par intervailes. Il pesait des deux mains sur la molette et lui faisait subir un faible mouvement de rotation : le grain était réduit en poudre par le frottement continu, non par la concussion. Ajoutons que le branle circulaire imprimé à la molette justifie l'hypothèse de Brugsch, d'après laquelle \(\sqrt{\mathrm{N} Z}\) aurait eu pour sens primitif tourner, zeonden, drehen: l'allume-feu \(\overbrace{}^{2}\) nouzou, \(4^{2}\) Azou, aurait été à l'origine le tourneur, et le sens frotter, écraser, serait un sens secondaire, dérivé du mouvement de la femme qui fabrique la farine. Secondaire ou non, le sens frotter, écraser par frottement, existe, et c'est celui qui prévaut à l'époque historique lorsqu'il s'agit de préparer la farine, lẹs couleurs, les poudres médicinales extraites des végétaux, des minéraux et même des animaux.
\(4^{2} \underbrace{8}\) AzOU-HOROU, peut donc signifier frotter la face, et, sill le signifie réellement, quel rapport y a-t-il entre l'opération que

\footnotetext{
* Le langue sacrée, p. 213,215-218. M. Soldi pense que le vase qui suit le mot \({ }^{\circ}\) est un déterminaif d'idée, les vases en pierre dure étant forés et évidés par l'outil qu'ils déterminaient.
}
cette traduction indique et l'idée de salut? On sait combien les gestes de salut et de prière sont variés dans le monde barbare. Chez tel peuple, on saisit entre le pouce et l'index le nez de la personne qu'on veut saluer.* Chez tel autre, les deux interlocuteurs s'embrassent, se frottent le nez, crachent dans leurs mains puis se frottent mutuellement la face de leur panme mouillée. \(\dagger\) Je ne multiplierai pas les exemples, car je ne crois pas qu'il faille chercher dans cette direction l'explication de la formule. Le possesseur d'un talisman magique, lorsqu'il veut évoquer l'esprit qui y est attaché, frotte l'objet, quel qu'il soit, qui représente le talisman. Pour ne citer que des faits familiers à tous dès l'enfance, les héros des contes rassemblés dans les Mille et une Nutits frottent l'anneau ou la lampe merveilleuse, et cette action est si efficace que, si une personne ignorante, comme la mère d'Aladin, frotte la lampe trop rudement, le génie apparait furieux à plus grand bruit que d'ordinaire; \(\ddagger\) ils frappent encore du doigt des signes tracés sur un tambour de cuivre, et tous les esprits de l'univers se tiemnent à leur disposition.§ Le mécanisme de l'opération est facile à deviner. Un esprit a été tantôt logé dans un objet, tantôt attaché simplement à cet objet par la force des paroles et des opérations magiques: tant qu'on ne le suscite pas, il demeure inerte et caché, mais, sitôt qu'on le provoque en frottant l'objet ou un point déterminé de l'objet, il répond à l'appel. Le plus souvent il se rend visible, mais parfois aussi, comme pour le tambour d'Asem, pour la pierre historiée d'Alaeddîn Abou-shamat, il ne se devoile pas et ne se manifeste que par ses effets : dans tous les cas, le frottement est nécessaire pour produire l'intervention du ponwoir occulte contenu dans le talisman.

Je rattache ì cette même idée lorigine de l'expression 中 \({ }^{2}\) anz-hr. Il ne s'agit pas d'un geste de supplication par lequel on caresse la figure de la statue divine, car le verbe \({ }^{2}\) ( \({ }^{2}\) nouzou signifie frotter rudement, à la façon dont on broie le grain pour le réduire en farine: il s'agit au contraire d'un geste dur et presque

violent. Le dévot frotte avec force \(\ddagger\) la face \({ }^{\boldsymbol{\beta}}\) de l'image divine, afin d'attirer l'attention de l'esprit qu'elle contient et de le rendre attentif à ses prières. C'est un moyén brutal et dont l'emploi nous reporte à une époque très ancienne: plus tard, on préféra oindre la face d'huile ou de graisse parfumée en la caressant d'un seul doigt. Le geste original disparut de bonne heure, mais l'expression en subsista dans le langage religieux, chaque fois qu'on voulut s'adresser à un dieu, ou à un roi, fils du Soleil et chair de dieu, et frotter-ta-face \(\xlongequal{\infty}\) I devint l'équivalent de salut à toi. Hommage à toi, ou plus exactement Appel-ì-toi! \(\left\lvert\, \begin{gathered}\text { 最 } \\ 1\end{gathered}\right.\) nouzour HAROU, forma un mot composé, qu'on employa dans tous les sens dérivés auxquels prêtait la signification primitive Le frottement de face, l'appel, était accompagné d'une offrande destinée à excuser ce que le procédé avait de brutal, à justifier le trouble apporté à la
 HAROU s'élève alors à la puissance de substantif et devient \({ }_{T}^{\dot{p}}\) nouzouît-harou, litt. "le frottcment de face," lhommage, le cadeau qu'on fait au dieu, ou au mort divinisé et pourvu de statues de double, lors de la cérémonie du frottement de face: le mort divinisé voit alors le bauf d'hommage et l'hommage qu'on lui améne de ses domaineséternelles \(\frac{B}{\infty}\) No mo mo il compte cet hommage et il en suppute la valeur exacte lorsqu'on

Il me parait qu'on peut rapporter au même sens frotter un certain nombre des expressions composées avec le verbe \({ }^{2}\) nouzou. D'abord \(\underset{\mid}{\longrightarrow}\) nouzou-Ro, litt. "frotter la bouche," par métaphore, discutcr, causer, s'entretenir avec quelqu'un. Y a-t-il une image, comme chez nous, lorsqu'on dit de deux personnes qui se sont disputées qu'elles ont eu une prise de bec, ou qu'elles se sont prises de bec? ou bien y a-t-il la marque d'une cérémonie employée dans la discussion ou dans la conversation polie à une époque très ancienne? Je penche vers cette dernière interprétation, qu'on peut appuyer de quelques exemples, mais je me borne à l'indiquer ici. De ce premier sens, métaphorique ou non, dérivent par analogie les

\section*{139}
expressions comme 中中 0 n nouzou isolé, du sens qui résulte de l'ensemble de l'expression composée, le sens inspecter, premire soin, etc. Le terme nouzor, qui désignait l'action purement matérielle d'écraser cn frottant, frotter, passe au sens abstrait, comme dans nos langues latines, le terme matériel discutcre au sens abstrait du français discuter, discussion.
\$36.-D’après la tradition hermétique, Démocrite d'Abdére, "arrivé en Egypte, y fut initié aus mystéres par la grand Ostanés, dans le sanctuaire de Memphis, par lui et ses disciples, prêtres d'Egypte. Tirant de lui ses principes, il composa quatre livres de teinture sur lor et l’argent, sur les pierres et sur la pourpre. Par ces mots tirant ses principes, j'entends qu'il écrivit d'après le grand Ostanés. Car cet écrivain est le premier qui ait émis les axiomes: la nature cst charmíe far la nature, et la nature domine la nature, et la nature triomphe de la nature, etc." D'après ce passage, il semble bien qu'Ostanés soit un Egyptien, mais bientôt Synésios ajoute: "[Démocrite], en parlant du grand Ostanés, atteste que celui-ci ne s'est pas servi des projections des Egyptiens, ni de leurs procédés de cuisson ; mais qu'il opérait sur les substances avec des enduits placés au-dehors, et faisant agir le feu il effectuait la préparation. Et il ajoute: "C'sst l'usage chez les Perses d"opérer ainsi." * Voilà donc Ostanés rattaché par ses procédés opératoires à la tradition persane, et considéré comme un adepte des mages. Une tradition très ancienne, rapportée déjà par Pline, ì faisait décidément de lui un Persan et un mage. Une légende, racontée par Diogéne Laerce, assurait que Xerxès avait laissé à Abdére, chez son père Hégésistrate, des mages et des Chaldéens pour enseigner au jeune Démocrite la théologie et la magie: Ostanés aurait été un de ces mages, précepteurs de Démocrite. On a identifié Ostanés le mage avec l'Ostanés d’Hérodote, qui fut le beau-père de Nerxès. \(\ddagger\) Je n'insiste pas sur cette confusion: l'important c'est de constater qu'il y avait dans l'anticquité deux courants d'information opposés, l'un d’après lequel Ostanés aurait été un Egyptien, l'autre d'après lequel il aurait été un Chaldéen ou un P'erse.s

}

Prenons, dans les écrits attribués à Démocrite lui-même, ce qui a rapport à son prétendu maître Ostanés, et voyons ce que dit le philcsophe. Le début des Questions Naturelles et Mystérieuses est en assez mauvais état, mais les fragments qu'on y lit * peuvent se compléter pour le sens, par le dialogue de Synésios que j’ai cité plus haut, et par le commentaire de Zozime. Démocrite vient en Egypte, à Memphis ; il \(\delta\) est accueilli par le grand Ostanés et par ses disciples, dans le sanctuaire de la ville, c'est-à-dire dans le temple de Phtah, qui était devenu le laboratoire principal de la science égyptienne. Ostanés mourut pourtant avant de l'avoir inttié, sans lui laisser les livres où il avait condensé les résultats de ses expériences. "Il avait, à ce qu'on prétend, pris un poison pour séparer son âme de son corps, ou bien, à ce que dit son fils, il avait avalé du poison par mégarde. Or, avant sa mort, il comptait montrer les livres à son fils seulement, quand celui-ci aurait dépassé le premier âge. Aucun de nous ne savait rien de ces livres." Démocrite aurait évoqué son mâ̂tre de l'Hadés, en lui adressant directement ces mots: "Par quels dons récompenses-tu ce que j’ai fait pour toi ?" Comme Démocrite revenait plusieurs fois à la charge, Ostanés lui répondit qu'il ne pouvait parler sans la permission du Génie-íaínovos-et il ajouta: "Les Livres sont dans le temple." On les y chercha donc, mais sans rien trouver, et le philosophe se donna un mal terrible pour savoir comment éxécuter les opérations nécessaires. Il les accomplit tant bien que mal, puis, "le temps étant venu d'une cérémonie dans le temple, nous fìnes un festin en commun. Donc, comme nous étions dans le naos, tout d'un coup, une certaine colonne s'ouvrit, mais nous n'y vîmes rien à l'intérieur. Or, ni le fils d'Ostanés ni personne ne nous avait dit que les livres de son père y eussent été déposés. S'étant avancé, il nous conduisit à la colonne: nous étant penchés, nous vìmes avec surprise que rien ne nous arait échappé, sauf cette formule précieuse que nous y trouvâmes: La nature jouit de la nature: la nature triomphe de la nature; la nature maitrise la nature. Nous fûmes très surpris qu'il eût rassemblé en si peu de mots tout son écrit."

Ce qui frappe dans ce récit, c'est la couleur franchement égyptienne de la mise en scène. Le lieu de l'action est un temple égyptien, celui de Phtah à Memphis. L'ourrage cherché se mani-

\footnotetext{

feste dans le temple par un effet de la volonté divine, comme Gavait été le cas pour beaucoup des écrits mystiques de l'Egypte pharaonique, pour le Chapitre LXIV du Lizve des Morts, découvert a Hermopolis sur une brique d'albâtre,* pour le traité de médecine, apparu à Coptos sous Khéops, par un nuit de lune.i Le nom d'Ostanés lui-même est, comme Guodwin l'a montré, il y a vingt-cinq ans, la transcription exacte d'un des noms du dieu Thot \(\| \cap\) 命, \(4 \cap\) O 0 A Austanou, Ostané. Cet Ostané était à l'origine un des cynocéphales qui formaient l'ogdoade hermopolitaine, puis il s'était confondu avec Thot lui-même. Les Egyptiens dérivaient
 — उ
 variante de Thot prit de l'importance et elle fut représentée assez souvent dans les temples. Ostané avait ses livres comme Thot, remplis de prescriptions minutieuses, § et il jouissait des mêmes prérogatives que son prototype: on peut donc admettre légitimement qu'aux temps Alexandrins, Thot fut connu aux Grecs sous sa forme Ostanou-Ostané comme sous sa forme Tahouiti, sous la figure d'Ostanés, comme sous celle d'Hermès. La transformation d'Ostanés-dieu en Ostanés, prêtre memphite, est toute naturelle et trouve ses analogies dans la littérature mystique ou scientifique des âges plus récents: les dieux Thot, Shaî, Isis y deviennent de même les dieux philosophes Hermés et Agathodémon et la prophétesse Isis. Démocrite, personnage historique, ne pouvait prendre directement des leçons d'un dieu, mais rien ne l'empêchait d'en avoir reçu d'un sage égyptien. Ce sage avait hérité naturellement toute la science du dieu qu'il avait été : on l'appelait le grand Ostanés, comme on disait l'Hermés deux fois ou trois fois grand, et s'il était capable de professer la magie et les opérations chimiques de transmutation qu'elle comporte, c'est que Thot-Ostanou les avait inventées et pratiquées en sa qualité de dieu.

}

Le version égyptienne de la légende de Démocrite et d'Ostanés forme donc un tout parfaitement homogéne, et dont les détails sont confirmés par le témoignage desdocuments purement indigénes; qu'en est-il maintenant de la version Perse ou Babylonienne? On y remarque tout d'abord un fait curienx. Bien que, d'après la tradition, Démocrite ait voyagé en Chaldée, en Perse, même dans l'Inde, comme en Egypte, ce n'est pas dans le pays d'origine qu'il rencontre son maître de magie, à Babylone ou à Suse, mais celui-ci se déplace pour venir à lui : selon les uns, c'est en Grèce même que l'initiation a lieu, pendant l'expédition de Xerxès, et selon les autres elle s’accomplit en Egypte, mais Ostanés est un mage qui a quitté sa patrie pour enseigner aux bords du Nil. A bien le prendre, il semble que cette version persane ou babylonieme repose sur l'idée préconçue, qu'Ostanés était et ne pouvait être qu'un nom persan. La forme Ostanou-Ostané du dieu Thot n'était point connue hors de l'Egypte, et les Grecs en ignoraient l'existence. Au contraire, quiconque avait lu l'histoire des Achéménides connaissait divers grands persomages du nom d'Ostanés, un fils de Darios Nothos, un satrape de Parétacéne, contemporain d'Alexandre, sans parler de ceux qui modifiaient en Ostanés, le nom Otanés du beau-père de Xersès.* La donnée d’après laquelle Démocrite aurait eu un Ostanés pour maître entraînait donc, dans l'esprit de ceux qui la répétaient, la notion complémentaire que, le nom d'Ostanés étant un nom perse ou méde, le personnage qui le portait était nécessairement un perse ou un méde, mage ou Chaldéen de son métier.
ll me semble qu'en tenant compte des considérations que je viens d'exposer sommairement, on peut rétablir ainsi l'histoire de la légende d'Ostanés et de son développement:
\(r^{0}\). Démocrite va en Egypte s'instruire aux sciences sacrées pour lesquelles les Egyptiens étaient célèbres: il les apprend dans le temple de Phtah, à Memphis, d'Ostanés, qui est en réalité un dieu, une forme de Thot, mais que la tradition grecque considére comme un homme, l'un des inventeurs de l'alchimie.
\(2^{0}\). Le nom d'Ostanés rappelant surtout aux Grè̀s des Perses de haut rang, Ostanés devient un Perse par la vertu de son nom, et par suite un mage, un chaldéen, d'où la variante qui lui donne une origine babylonienne ;
\(3^{0}\). La tradition primitive constatant que Démocrite avait fait

\footnotetext{
* Justi, Iranisches Namenbuch, p. 52, s.v. Austanes.
}
ses études de sciences occultes en Egypte, une partie des écrivains n'hésite pas à la suivre, en se bornant à déclarer qu'Ostanés était un mage, venu dans ce pays, et qui s'y trouvait établi au moment où le philosophe y arriva ;

4". D'autres, qui avaient été frappés de la contradiction quill y avait à donner un Persan comme le prototype de la science égyptienne, préférérent supposer que Xerxés avait laissé des mages à Abdére, au retour de Salamine, pour instruire le fils de son hôte, qu'Ostanés était un de ces mages, et par suite, que Démocrite avait reçu sa science dun Ostanés, mais à Abdére, non en Egypte. Il y avait dans leur récit un anachronisme un peu fort, mais une erreur de dates n'était pas pour les gêner ;

5". Comme pourtant la tradition était constante qui faisait séjourner Démocrite en Egypte, on prêta au philosophe, en place de l'Ostanés dont on le privait, un nouveau précepteur du nom d'Apollobêkhés ou Apollobêx de Coptos.* Est-ce un dieu humanisé comme Ostanés, Horus-l'épervier ainsi que Wiedemamn le pense? Est-ce un homme réel ? Le fait est tuuil ne réussit pas à déposséder complément Ostanés.

Tel est, je crois, la série dopúrations inconscientes qui ont transformé le dieu \(\| \cap \underset{\text { man }}{\sim}\) Aousdayou - Ostanou - Ostaní, et le Thot Egyptien, maitre fabuleux de Démocrite, en un mage Persan du nom d'Ostanés.
* Pline, Mist. Nat., XXX, II.

\section*{A BRONZE URAUS OF UNUSUAL FORM.}

Figures of the Egyptian Ureus, or Sacred Asp, which we know as the cobra, are common enough in its natural form as a serpent. The specimen shown on the plate is one of the less common forms. It represents a uræus having a man's head, with wig and beard, wearing the pschent or double crown of upper and lower Egypt, on which is placed a ureus. Its base is a rectangular box, probably intended to hold the mummy of a zery small specimen of the reptile.

The ancient Egyptian name of the ureus was "ara," and its figure was used as a determinative of all the goddesses. Champollion, in his "Panthéon," says that this name "ara," occurs in Coptic under the form of " ouro," signifying a king. The urreus in its natural form is always found on the head-dress of gods and kings. Dr. Birch suggested that the reason for this was that it represented "Neb-Annut,
 "the goddess of "the hours of Ra." Sir P. Le Page Renouf (Proc. Soc. Bibi. Arch., Vol. VIII, IIr) showed that "unnut," meaning "an hour," is identical with the word meaning a "she-hare," and that, like it, it signified "leaper." He goes on to show that "unnu" is an appellation of the rising sun. Thus, if the uræus represents "unnut," it is an appropriate ornament of the head-dress of a sun-god. The kings perhaps wore it as signifying their divinity.

At other times the ureus is represented with various head-dresses-sometimes with the disk and horns, when it is said to

(TWICE REAL MEIGHT.) represent the goddess Meha; sometimes wearing the crown of lower Egypt, when it is said to represent Neith. I have a beautifully made ureus of lapis-lazuli, with the head of a lioness, thus associating it with Sechet. Examples of the uræus in its natural form of a serpent are very common in bronze. The expanded "hood" which is characteristic of the reptile, is often ornamented with colours, which are not true enamels, but are sometimes a sort of mosaic of glass, and sometimes of coloured pastes. It is also found made of a variety of other materials, as silver, gold, and faience. The ureus here depicted is probably meant to signify the kingly power of the royal person in whose tomb it was placed, rather than association with any deity.

A good deal of information concerning the uræus-of which I have availed myself-will be found in Mr. Hilton Price's "Catalogue of Egyptian Antiquities," and in Dr. Budge's book, "The Mummy."

The dimensions of my specimen are-
Length of the extended body of the reptile, \(4 \frac{1}{4}\) inches.
Height of erect portion, including crown, \(2 \frac{1}{4}\) inches.

> W. L. Nash, F.S.A.

\section*{NOTE ON THE COPTIC SPELL.}
\[
\begin{aligned}
& \text { 6, Grat's Inn Square, } \\
& 5 \text { th Marth, iSgS. }
\end{aligned}
\]

Dear Mr. Rylands,
I am much obliged to Mr. Crum for the information and suggestions given by him in the Proceedings for March. Although I cannot accept all his views upon the papyrus, they are all valuable, and I am relieved to find that Dr. Wessely's transcription is not so faulty as the note in the Exploration Fund's Report had led me to fear. To take the points in their order :-
L. i233. I gratefully accept the correction of miХрРСТОС for \(\mathrm{HX}^{\boldsymbol{X}} \mathbf{\text { pHCTOC. As will be seen from the translation, I }}\) had already assumed the existence of the missing J .
Ll. 1234-5. I am also quite willing to substitute the Boheiric б for the Sahidic 2 in the words c\&2pHs and c\&20ers. In the transcription of the first-named word as \(\sigma a p \eta \ddot{ }\), the scribe has omitted the aspirate altogether, and I therefore thought it better to use the weak aspirate hori rather than the stronger kei. The reading of both \(\bar{\Pi} \iota \sigma u \sigma \phi e\) and \(\bar{\Omega}\) \(\sigma \sigma \sigma \phi \iota\) as rursegzcycy is tempting, but I doubt whether there is any precedent for splitting up the Sahidic \(\bar{\Omega}\) (i.e. \(\in \mathbb{I}\) ) into rir. In any case, "the seven" cannot refer to the olivebranches as suggested by Mr. Crum in the Report, for in no sense can it be said that Jesus is "below" or "within" them. If Mr. Crum's reading be adopted, "the seven" will probably refer to the seven heavens of the Book of Enock and the Ascensio Isaiae, some word like 屯ुमors (for cyzcycte is a feminine form) being understood. The reading of coarфe as a divine name seems to me to do less violence to the original, but neither reading is free from difficulty, and I should like further examples of names constructed on the principle mentioned in my original paper before asserting that my guess is better than Mr. Crum's.
L. 1235 . I do not think that eva can be intended for \(\in \mathbb{I} I\) or 2Nf, "bring." The sentence thus read has no meaning, and when errs is used in the early part of the papyrus it has always €̧,
Ll. 1236-7. If I understand Mr. Crum aright, he would read
 Tor \(\lambda \in \sin\) К. Т. \(\lambda\). "May your power remain away from such an one," which seems more like an ill-wish than a formula of exorcism. The change of the \(\beta\) of cwhsc into \(n\) is also a little forced. I still prefer the former reading.
L. 1239. In reading diw O中 as ETZ,WTC, Mr. Crum treats the first 0 as \(T \mathcal{Z}\), to which it corresponds in Sahidic, but the second as the equivalent of I merely, which it is in Boheiric. This is at first sight inconsistent, but otherwise I have no objection to reading, "who is upon him," instead of "Ethiopian." On the whole, I do not now think the latter reading can be maintained.
Generally, therefore, the difference between Mr. Crum and myself is that while he uses Boheiric forms by preference, I have tried to keep as much to the Sahidic dialect as possible. This I did because of the frequent occurrence in the text of the word \(\bar{\pi}\), which is exclusively Sahidic, as is also the \(\ddot{\mathrm{I}}\) ( \(\tau\). Revillout, Milunges d'archeol. egspt., t. III, note on p. 19). But it must be noticed that the scribe never keeps to one dialect for long, but uses forms like the Boheiric छrorer and the Sahidic Inforfe in the same sentence and even (accepting Mr. Crum's last suggestion) in the same word. This is explained by M. Revillout (Mit. cit.) as due to the fact that the Coptic language was then in a state of flux and had not yet crystallized into the later forms known to grammarians. But this is contrary to what we know of dialectal changes, and we do not, for instance, meet Attic and Wolic forms in the same text until the language has become utterly corrupt. Dr. Erman, on the other hand, supposes ( \(A . Z, \mathrm{I}_{1} \$_{3}, \mathrm{p} .9^{2}\) ) that the errors are to be attributed to the text being a copy at second or third hand from the demotic original. Yet the scribe has not made many mistakes in the (Greck part of the text, and it is not therefore easy to see why he should have suddenly become careless in one part of his task more than in another. I would therefore ask Mr. Crum and other

Coptic scholars to consider whether this jumbling together of dialects may not be explained in a third way, to wit, that the scribe was not copying another document at all, but was writing as best he could, in Greek letters, formulas which he had been accustomed to repeat from memory, but of the meaning of which he was ignorant. If this be thought a merely fanciful explanation, I would point out that this is the course which has been followed by conjurors in all ages. Thus, in a gnostic papyrus lately translated by M. Amélineau, God is invoked "par tes noms glorieux Adônai, Eloi, Elemasabaktani," the phrase which the scribe takes for a name of God being, of course, the last of the Words from the Cross ; while in a small Anatomic of Legerdemain, now in my possession, and first published in 1635 , the author recommends his readers, when performing sleight-of-hand tricks, to use in their bomiment or "patter" such words as "hocus pocus" (hoc est corpus), "hiccius doctius" (hic est doctus), "vade couragious" (vade cor ejus?), "revoca stivoca" (rerocasti roces?), and many, others, without, apparently, the least idea that he is corrupting the words of some Latin ritual.

Very faithfully yours,
F. LEGGE.

\section*{LETTER FROM HAMMURABI.}

Dear Mr. Rylands,--
As an appendix to a number of very archaic tablets from Telloh, M. Thureau Dangin publishes in the Retue d'Assyriologie for 1897 , Vol. IV, page 85, a letter from Hammurabi (or Hammura paltu) to Sinidina, King of Larsa (Ellasar), announcing the dispatch of 360 workmen, half of them to be employed at Larsa and half at Laḩab.

This text is of importance to Biblical Archæology, because it is in another dispatch from the same monarch, also to Sinidina, his vassal, that we have so distinct a memorial of King Chedorlaomer, a reference confirming the incidental allusion to Chedorlaomer, together with Eriaku (or Arioch) and Tukdal (or Tidal), discovered by Mr. Pinches in tablets of a later date.

The first letter of Hammurabi is given thus by Father Scheil in the Reius Biblique for 1896, page 601 :-

A-na Sin-i-din-nam.
Kiz-bí-ma
Um-ma Khatam-mu-ra-hi-ma
i-la-a-tim cha E-m-ut-ba-lim
id li-ti-ka.
Ûm-(um) cha Ku-dur-la-ulh-sa-mar.
u-chu-al-lu-ma-ak-qu
i-mu-ma, isza ilu ba-ni-iq-qu
i-na tsab-imn cha sa-ti-ka
tsal-am la-pu-ut-mad
i-la-a-tim
a-na chu-ub-ti-chi-na
li-chn-al-li-mu.
Which he renders :-
"A Sin idinnam soit dit de Hammurabi: Les déeses dı pays d'Emutbalim, je te les ai donneés comme prix de ta vaillance, au jour de la défaite de Kodorlahomor. Puisque le dieu ton Créateur s'en offense, avec les troupes qui sont sous ta main, detruis leur gens et que les décsses restent sauves dans leur sanctuaire."

Father Scheil adds in a note that this text proves that the prince of Emutbal (or Western Elam), indicated as defeated, together with Rimsin (Eriaku), by Hammurabi, in contract tablets from Tell Sift and Lassa, was Kodorlahomor.

The annexed text is a copy of the tablet as given by M. Dangin in plate 31 , No. \(8_{4}\) of the Revue \(d^{\prime}\) Assyriologie:-

Mr. Ball has very kindly sent me the following :-

\section*{BIBLICAL ARCHÆOLOGY.}

To H. Rylands, Secrelary.
\[
\text { February } 2 n d, \text { isy } 8 .
\]

\section*{Dear Sir,}

Seeing that in Ancient History of whatever kind nothing can be thoroughly well done, without a clear understanding of the succession of time, and that at present no such clear view exists as regards the only documents worthy of consideration in Biblical Archæology.

Seeing that Rome was, without doubt, founded in 753 r.c., and that the Olympiad of Coræbus occurred 23 years previously, in 776 e.c. and 3182 a.m. That Rome was also founded 431 years after the termination of the siege of Troy, in in \(8+\) b.c., and that both of these computations when worked out give the same date for the Nativity, viz., 3958 A.m. That these dates are all known to, and acknowledged by, every classical scholar as being correct, and that all modern discovery points to the same conclusion ; can it any longer be denied that the Nativity did occur in the 29th year of Augustus Octavianus Cæesar, A.U.c. 753, A.m. 3958, and that this latter gives us, in the same ciphers, the date b.c. of the Creation of Man?

If there were no other evidence available than this, it would be an act of common prudence to recognise and publish this acknowledgment; but seeing that it is plainly shown by the Holy Scriptures, and that behind them again there exists a mass of other classical and monumental proof available, which must ere long be put before the Christian world, it seems that it would be the height of unwisdom not to take the lead in confessing the shortcomings of Biblical chronology, before the storm of criticism shall arise.

To three, nine, five and eight
Add the current A.D. date.
The sum of these at once does state
The years since God did man create.

\section*{A HYMN OF NEBUCHADNEZZAR.}

\author{
By S. A. Strong.
}

With the exception of Assurbanipal, who scems to have formed the centre, if not the source, of a whole range of religious literature, few Assyrian or Babylonian monarchs cultivated the heavenly muse otherwise than anonymously. The fact, therefore, that the following hymn was undoubtedly either composed or inspired by Nebuchadnezzar, gives it an almost unique value and interest.

The substance contains no elements that are new : both in tone and in terms it closely resembles the great inscription of the India Office. The peculiarity lies in the form. The text is an acrostic consisting of four stanzas of ten lines each, the ends of which when read vertically make up the group \(\rightarrow Y|=4|\) A- \(\mid=Y Y F=\) that is to say \(N e b n\), the eponymous patron of the royal singer Nebuchadnezzar. It is composed in metre, as would appear to the eye from the division-marks between the feet in the body of the lines, even if the structure of the latter were less obvious to the ear. The elements that form the measure are combined and arranged more irregularly than in the texts of this character that we have examined hitherto (P.S.B.A., XVII, 4, pp. 131-151) ; but the following examples show most clearly what is perhaps the type of metrical construction :-
\begin{tabular}{|c|c|c|}
\hline an & mansaza ilinm rabut & ukin kivib Babilu \\
\hline putkudu ćsrieti & uddušu mahazi & bašu katušsuc \\
\hline lunanni amêluitu & siknatum natis̆tum & it \\
\hline umallat íatuşsu & salmatum kakadu & ana ricussu \\
\hline
\end{tabular}
and if these be compared with such lines as, for example (l.c., p. 132)-
\begin{tabular}{|c|c|}
\hline arbu' & littuttala simisu \\
\hline Leruşu â llbas̆i & liksuda nism \\
\hline
\end{tabular}
it will be seen that in metrical value they stand to the latter in the ratio of 3 to 2 . In other words, a common metrical element is employed in one case in groups of three, and in the other in groups of two.

The text is written on both sides of a clay tablet numbered \(82-7-4,42\) in the British Museum.

\section*{Translation.}
1. . . . . . (Neloo) king of the gods of heaten and earth,
. . . . . . his fathers, lord of the gods, lord of the unieverse, the great god, loving truth and right, the sañour of him who waits upon him,
god, the king of the gods of heaven and earth, king of the gods of all that is in heaz'en and earth, zeho makes fast the bonds of fate,
5. whose grodhead on high in heaven is great, below in the deep mighty are his zeorks,
. . . . . . he made his exalted might to preatail, he created the bread of the gods . . . . . . .
. . . . . the Anmmaki fall dowen before him, who makes great his royalty,
. . . . . . . his command sounds aloun, he abides by his decree,
10. . . . . . the governor of heaten and earth, welho sends plenty, the god who over heaven and earth extends his lordship, exhalts his godhead!

Nebo, lord of lords, zeisdom of the gods, offstring of Erua, the shining one, light of the Isigi and the Anumnaki, firstborn of Marduk,
. . . . . . . the reisdom of Mummu, the legetter of the sons of sod,
. . . . . . . zehose anger lurns like fire, who holds the shining stars in their courses,
5.
. . . . . . . . zetho judices right, zoho brings to nought the a'hole company of the zuicked,
. . . . . . . the chief, the most principal, lord of the gods . . . .
. . . . . . . and the throne of royalty to the king weho feared his godhead,
. . . . . . . . truth and right to him zoho secks life,
. . . . . . in the midst of the bright heavens he sets great dights,
10. . . . . . . . . over the broad carth he has established prosperity.

The shining signs which he fixed as his seal, judgments without equal, a place of abode for the great gods, he founded in Ball'lon,
the establishment of the sanctuaries, the reneze'al of the city', are in his hand,
the children of men, lizing cratures, he formed as his handiwork,
5. the beasts of the field, four-footed and crecping things, he bestoreed upon the ruler,
the life of him who holds his srat seal, the lord of life,
the fear of his exalted godthead is appointed to gods and men . . . . the zehole company of the groa's of heaten and earth bend their heads, in fear they stand bouing loze,
the offspring of the king for mankind he made to be a glorr and a terror,
10. zeith fear he clothed him, with shining lisht he coiered him.

He made his lordship greater than before over all the four quarters of the zeorld,
he subducd under his feet peoples and lameds,
he filled his lund aith mankind for his chieftaing', alnd Marduk, the great lord, ablo lowed his rolalty,
5. turned his heart to the prescraing of Eisasila (and) E: Eida, and the reneatal of Batblon, the city that he loied,
he brought to the kingship Nebuchadnessar, rejoicing his heart, the prince who feared him, the work of his hand, has works holy and just he looked upon, and to the making of the kingship over all peoples he called him by his name, he gave into his land a right sceptre, broadening the lands, he caused mighty weapons to be zeieldcd in his hond, who overpozvers his enemies,
10. he bestowed protection upon him, the god who forgižes not, who vanquishes the foes and the evil-doers.

\section*{Notes.}
4. The same phrase, viz., an lugal dim-mê-ir an-ki-a, occurs in the great inscription of Nebuchadnezzar, II, \(5^{8}\). Compare also the following fragment (W.A.I. IV, 2S, 2 ) :-
bê-lum ina a-ga-gi-šu
Rammân ina \(\hat{-}\)-si:si-s̆u
\(\check{s a-d u-l \dot{c}}\) ra-bu-tu
a-na \(a-\)-ga-si-šu

the Moon shines large.
5. For the restoration nabuissu, cf. W.A.I. II, 66-1-2, siluturat nabnisa.
6. lauti, an abstract from the root ל', 'to be strong.'
9. As regards the restoration šak̂k amatsu, cf. such phrases as Sin šukûu namriri (Shalm., Ob. 6).
10. Cf. Neb., IV, 35, ana Rammâni mus̆aškin heçalli ina mâtiia.
1. Cf. the cylinder of Antiochus, II, 4, Nathí afil Ésagila bukur Marduk rištú ilidti Erúa.
3. AHummu is equivalent to apssí (Del., Handwe., p. 415), and apsú is explained by lit mimôki (W.A.I. IV, 52, 34 b). On the other hand Nebo is called bimu piristi (W.A.I. V, 43, \(32 c, d\) ), and we find the similar phrase nûşir piristi applied in the cylinder of Nabonidus (W.A.I. V, 65,33 ) to the wise (ingíitu) who occupy the bit mummu.
8. For the restoration of. the 'Grotefend-Cylinder,' where ( \(\mathrm{I}, 4\) ) the same king describes himself as mustê'umb bulatam.
1. The physical basis of the meaning of burumu discloses itself very clearly in this line. The meaning assigned to rittu is suggested

 minative Fry has elsewhere frequently the value of kumukku, 'seal,' and, as for Kisib, in the fourth canto of the Creation Epic Marduk seals the tallets of fate ina kisibbi, 'with his seal' (IV, 122).
 bulum, in W.A.I. V, 42, 50 .
S. ukamat seems to be derived from a root seen in the Arab. ' despicable.'
10. Almost the identical phrase occurs in the third tablet of the Creation series, line 28 : pullbâti us̆albišma mîlammê us̆dă̌s̆ăa.
S. The closely parallel expression in Nel)., I, 45, viz., Zुattu isurti us̆atmith satuad, 'a right sceptre he gave into my hand,' establishes the meaning of rittu - in the present case at any rate-beyond a doubt ; nor is it impossible that we have here the true pronunciation of the word which in similar passages is usually transliterated laketu.

L. 107. je passai un anneau dans sa lèvre supírieure
L. 108. j'attachai (à cet anneau) une chuine, avec laquelle on conduit les chiens en laisse.

L’assyrien " butnu," cf. Del., H. WV., p. 296, désigne un instrument tranchant ; cf. l'arabe ختَ ; c'est le couteau qui sert à pratiquer la circoncision. L'assyrien "hatânu" a le sens de protéger, l'arabe = cironcire. (Lane's Lexicon, p. 703.)-L'assyrien meṣu \(=\)
辰 = mâchoires. Cf. Dozy, Supplément aux Dictionnaires Arabes, p. 598. L’assyrien șirritu signifie probablement: anneau. Le sens indiqué convient parfaitement ici. Si nous passons maintenant aux monuments figurés, nous y trouvons la confirmation de la traduction
proposée par nous. En effet sur la stèle d'Assarhaddon trouvée à Sendjirli nous voyons deux princes captifs aux pieds du grand roi d'Assyric.-Ils sont tenus en laisse comme des chiens ; à leur lèvre supérieure on distingue-mal il est vrai-un anneau auquel est attachée la chaîne. Il se pourrait fort bien que la corde fut fixée à la lèvre par un simple noeud. Le sens donné à ṣirritú ne serait pas alors celui de "anneau." Mais cela n'infirmerait en rien la signification générale de ce passage où une fois de plus nous voyons les raffinements de cruauté qu'Assourbanipal se complait à nous décrire.
§2. V. R. 10, 1. 95. Assourbanipal après avoir fait la conquête de l'Elam et anéanti la puissance des rois Arabes, ordonne que les princes captifs trawaillent comme de simples ourriers à la construction du palais de Ridûti ; il ajoute, l. 95 :-

\section*{ina elili ningûti ubbâlu ûmšun.}

On traduit généralement, cf. K. B. II, p. 235 : Sie brachten unter Gesang und Spiel ihre Tage hin ; ce qui est impossible. Assourbanipal veut dire au contraire, "qu'ils passèrent le reste de leur vie à gémir et à soupirer." On sait que le elélu est une complainte, cf. Delitzsch, H. W., p. 73; quant à ningítu, il a évidemment ici un sens analogue.
§3. L’assyrien laạàru (voir Delitzsch, H. W., p. 28S) signifie probablement: claie pour sécher les dattes, natte. Ultu hasậri adi eli nâri \(=\) depuis le lien où sèchent les dattes jusqu'au canal.
 d'indiquer.
\$. Quelle est la fonction du râb zikâti ? (M.A.P., p. 129). Autrement dit que signifie le mot zikâti que nous rencontrons en assyrien au pluriel seulement? Je crois qu'un passage de Ibn Batoutah nous en fournit l'explication. Il est curieux et vaut la peine d'être reproduit ici (cf. Ibn Batoutah, texte et traduction par Defrémery et Sanguinetti, tome premier, p. ifz). Le célèbre voyageur arabe venant d'Egypte et se rendant en Palestine passe par la ville de Kathiah. "C'est là," dit-il, "qu’on perçoit les droits sur les négociants, qu'on visite leurs marchandises et qu'on examine très attentivement ce qu'ils ont avec eux. C'est là que sont les lureaux des douanes, les receveurs, les écrivains et les notaires. Son revenu est de mille dinârs par jour. Personne ne dépasse cette station pour aller en Syrie, si ce n'est avec un passe-port délivré au

Caire, et nul ne pénètre en Egypte par ce point, sans un passe-port de Syrie ; et cela par sollicitude pour les habitants et par crainte des espions de l'Irâk. Cette route est confiée aux Arabes, qui ont été spécialement préposés à sa garde. Lorsque la nuit arrive, ils passent leur main sur le sable, de manière qu'il n'y reste aucune trace ; et le lendemain matin l'émir vient et examine le sable. S'il y trouve une trace, il exige des Arabes qu'ils lui représentent celui qui l'a faite. Ils se mettent tout de suite à sa recherche et il ne leur échappe pas. Alors il l'amènent devant l'émir, qui le châtie à son gré." L'arabe áŕ; employé ici signifie droit d'entrée sur les marchandises (cf. Dozy, Supplément aux Dictionnaires Arabes, p. 597). Il correspond à l'assyrien zikâti, et le râb zikâti est par conséquent le fonctionnaire qui perçoit les droits d'entrée sur les marchandises.
§ 5. Dans les documents omineux, parmi les diverses calamités qui pouvaient affliger les régions d'Assyrie, se trouve fréquemment mentionnée l'apparition des lions. Autrefois ces fauves pullulaient dans les marais de la Chaldée, de l'Elam, de l'Assyrie et y causaient à certains moments des ravages sans nombre. Aussi lorsqu'une invasion de lions était signalée, les habitants en proie à une frayeur immense fuyaient, laissant leurs troupeaux à la merci des bêtes féroces. Les historiens du règne d'Assourbanipal nous ont conservé le récit d'une de ces invasions de lions ; sans doute il s'y trouve de l'exagération, mais il faut bien qu'il y ait une part de vérité dans leurs descriptions imagées, destinées à rehausser encore le prestige d'Assourbanipal. Nous devons la publication du passage suivant à S. A. Smith (voir: Die Keilschrifttexte Assurbanipals, Vol. II, K. 2867).

\section*{Verso.}
L. 24. ul-tu ina kussi abi ba-ni-ia ú-si-bu Rammân zunni-šu ú-maš-ši-ra E-a ú-pat-ti naqbê.
L. 25. kišâti danniš iš-mu-hna qanâti ṣu-si-e us̆-te-li-bu la i-šu-u ni-ri-bu \(\qquad\)
L. 26. ta-lit-ti nêsê qi-rib-ši-in i-šir-ma ina la-a me-ni ig-dam-ma-ru (?) . . . .
L. 27. ina ú-kul-ti alpث̂ si-e-ni u a-me-lu-i in-na-ad-ru-ma e-zi-zu
1.. 28. bu-ul ṣ̂ri ka-a-a-an ń-šam-qa-tu i-tab-ba-ku pagrê a-me-lu-ti ib
L. 29. ki-i tap-di-e Gir-ra tap-qid ša-lam-tu amêlu mitûtê alpê u. . . . . . .
L. 30, i-bak-ku-ú amêlu rềê amélu na-qi-di ša la-ab-bi iq . . .
L. 3r. i-ir-ap-pi-du da-ad-me ur-ru u mu-šu . . . . . . . .
L. 32. ip-šit nêšêê ša-a-tu-nu ik-bu-ul . . . . . .
L. 24. Lors de mon aqùnement aut trône que j"occupais apris mon pire, le dieu Rammân envoya la pluie, Ea fit jaillir les sources.
L. 25. Les forîts se couvrivent d'une épaisse terdure et les roseaux, les plantes des marais étaient si torffus qu'on ne pouvait se fraver un passage aut travers.
L. 26. les lions au milieu d'eux prostóraient, sans nombre ils . . . .
L. 27. ils rugissaient affamés à la vue des bestiaux, des moutons et des hommes
L. 28. ils massacrent le bétail des champs, ils broient les cadavres hutmains.
L. 29 comme s'il était abandonné a la peste dévastatrice le cadavire des hommes morts, des bestiaux . . . . . .
L. 30. les bergers, les paitres sanglotent puisque les lions
L. 3r. ils se blottissent dans leurs cabanes jour et muit
L. 32. les ravages de ces lions . . . . . . . . . .

La suite du texte nous apprend yu'Assourbanipal aussi intrépide à la chasse qu’au combat, se lança dans les épais fourrés, organisa des battues et mit fin aux déprédations des lions. "L. 34, qinnâtisưnu uparrir, j’anéantissais leurs familles." Il n'y a que peu de choses à ajouter au point de vue philologique; remarquons seulement gu' à partir de la ligne 28 les verbes sont au présent. Les auteurs pour domner plus de vie et de couleur à leurs récits emploient de préférence le présent au passé (cf. le récit du déluge, par exemple). L. 27. L'assyrien ukultu se trouve II R 29, 1. 40, C.D. comme synonyme de karurtu ; ukul \(=\) husahhbu. De même que bulû́tu signifie à la fois nourriture et manque de nourriture, famine, ukultu signifie, (r) nourriture, (2) famine. Ici il a le sens de "désir de manger," "besoin de nourriture." Pour le sens de bubûtu, cf. Haupt, "über einen Dialekt der Sumerischen Sprache," p. 517.

\section*{A DICTIONARY OF THE EGYPTIAN LANGUAGE.}

\section*{An Appeal to Custodians and Owners of Inscriptions and Papyri.}

The following circular and appeal has been transmitted by Professor Erman, of Berlin. For the translation, we are indebted to the kindness of Miss Renouf.

His Majesty the Emperor having been graciously pleased to grant, by rescript dated 10 th May, I897, funds for the pubiication of a Dictionary of the Egyptian Language, the Royal Academy of Sciences at Berlin, the Royal Society of Sciences at Göttingen, the Royal Society of Sciences at Leipzig, and the Royal Academy of Sciences at Munich, have appointed a Committee, consisting of the undersigned, for the conduct of this work.

It is intended that the Dictionary of the Egyptian Language shall comprise all words preserved in texts written in hieroglyphics (including hieratic) ; references to Demotic and Coptic texts will be introduced only when essential to the elucidation of words found in the hieroglyphics.

The collection of material will proceed according to the method elaborated in compiling the "Thesaurus Linguae Latinae," this arrangement affording the readiest means of bringing together all the possible references for every word. Obviously, in the final revision, only the most important of those references will be quoted. About eleven years is the estimate for the duration of the work down to the beginning of the printing.

It is essential to the carrying out of this great undertaking that those engaged upon it should work from the existing texts in their most complete and accurate form; they should also be able to utilise such inscriptions and papyri as are still unpublished, and to revise the published texts when necessary.

All this can be attained only if the necessary support is forthcoming from outside the circle of our fellow-labourers.

Recognizing the necessity for this support, the International Congress of Orientalists, at their recent meeting in Paris, formally expressed the desire-
"Que le service des Antiquités d'Égypte, les Administrations de Musées et les Sociétés savantes facilitent l'exécution de cette grande entreprise, et communiquent aux savants chargés de ce travail les documents dont ils auront besoin."
Conformably to this resolution, the undersigned Committee herewith earnestly and with all deference request the various scientific societies and corporations, the Administration of Antiquities in Egypt, trustees of museums, owners of private collections, and all fellow-specialists, to communicate copies, squeezes, and photographs of texts newly-discovered or otherwise unknown, and to facilitate the revision of those already edited. The Committee distinctly undertake for their own part and in the name of all their collaborators, to regard such communications as confidential, and neither to publish them nor make use of them ericept for the Dictionary. On the other hand, during the progress of the work they will gladly give information to fellow-specialists as to theoccurrence of particular words.

It is requested that all communications and enquiries referring to the Dictionary be addressed to Professor Ad. Erman (Berlin, C. Lustgarten, Königl. Museen), whose name is among the undersigned. Berlin, December, i897.

The Academic Committee for the publication of the Dictionary of the Esyptian Langruage,

Ebers. Pietschmann.
Erman. Steindorff.

Professor Erman has added by request the following explanation as to the method of compilation pursued for this colossa work:-
"By the system adopted every text is divided into portions consisting of \(20-30\) words, and copied once with autographic ink. Each of the portions is then printed on separate slips of paper, as many in number as the words contained in it. On each of the \(20-30\) slips thus obtained one of the words is underlined with red ink, and the slip is then filed in the collecting cases as reference for the word in question.
"The labour of writing for lexicographical work is thus reduced to about the zoth part of what is necessary on any other plan, and a more absolute completeness of material is ensured than has been attained hitherto by any other method."

> w. H. R.

According to Rule XXX1X, no meeting will be held in April.

The next Meeting of the Society will be held at 37 , Great Russell Street, Bloomsbury, W.C., on Tuesday, 3rd May, 1898, at 8 p.m., when the following Paper will be read :-

\author{
Dr. Paul Ruben: "An Oracle of Nahum."
}

\section*{NOTICES.}

Subscriptions to the Society become due on the ist of January each year. Those Members in arrear for the current year are requested to send the amount, \(£ \mathrm{r}\) is ., at once to Messrs. Lloyds' Bank, Limited, i6, St. James's Street, S.W.

Papers proposed to be read at the Monthly Meetings must be sent to the Secretary on or before the ioth of the preceding month.

Members having New Members to propose, are requested to send in the names of the Candidates on or before the roth of the month preceding the meeting at which the names are to be submitted to the Council.

A few complete sets of the publications of the Society can be obtained by application to the Secretary, W. Harry Rylands, 37, Great Russell Street, Bloomsbury, W.C.

The Library of the Society, at 37, Great Russell Street, Bloomsbury, W.C., is open to Members on Monday, Wednesday, and Friday, between the hours of II and 4, when the Secretary is in attendance to transact the general business of the Society.

As the new list of members will shortly be printed, Members are requested to send any corrections or additions they may wish to have made in the list which was published in Vol. IX of the Transactions.

\section*{THE FOLLOWING BOOKS ARE REQUIRED FOR THE LIERARY OF THE SOCIETY.}

Menbers having duplicate copies, will confer a favour by presenting then to the Society.

OF

\section*{BIBLICAL ARCHÆOLOGY.}

TWENTY-EIGHTH SESSION, 1898.

Fourth Meeting, 3rd May, isgS.
Rev. JAMES MARSHALL, M.A., in the chaik.

The following Presents were announced, and thanks ordered to be returned to the Donors:-

From the Publishers, Eyre and Spottiswoode, The Queen's Printers Aids to the Student of the Holy Bible. With illustrations selected and described by the Rev. C. J. Ball, M.A.

From the Author, Dr. Wiedemann:-Ein Altägyptischer Weltschopfungsmythus. Der Urquell, Bd. VIII, H. 3u, 4 S. 57-75.
From the Author, P. A. Cesare de Cara, S.J.:-Gli Hetheipelasgi in Italia, Gl' Italici nella paletnologia. Sommario. Civilta Cattolica, in March, 189 S.

From the Author, P. A. Cesare de Cara, S.J.:-Gli Hetheipelasgi in Italia, Gl' ltalici nella paletnologia. Sommario. Cizilta Cattolica, 19 February, 1898.
From the Author, P. A. Cesare de Cara, S.J.:-Gli Hetheipelasgi in Italia, Gl' Itali della Storia. Sommario. Civilta Cattolica, 16 April, 1898.
From the Author, Georg Ebers:--Sir Peter le Page Renouf. Deutsihe Rezue, March, i8gS. Svo.

The following Candidates were nominated for election at the next Meeting, to be held on the 7 th June, 1898 :-

The Right Rev. the Lord Bishop of Ely, The Palace. Ely.
Wymne, E. Baxter, LL.D., J.P., 170, Church Street, Stoke Newington.
Rev. George H. Box, M.A., Hebrew Master, Merchant Taylors' School.
James Chisholm, s6, Knowe Terrace, Pollokshields, Glasgow.
Charles Marston, Highfields, Wolverhampton.
Robert Sewell, M.R.A.S., etc., 6, Palace Mansions, Buckingham Gate, S.W.
The following Candidate was elected a member, having been nominated at the last Meeting, held on the ist March, 1898 :-
M. J'Abbé Leuridan, Bibliothècaire des Facultés Catholiques, Lille.
Dr. Paul Ruben read a paper entitled, "An Oracle of Nahum."

Remarks were added by Mr. T. G. Pinches, Mr. John Tuckwell, 1)r. Paul Ruben, and the Chairman.

Thanks were returned for this communication.

\section*{AN ORACLE OF NAHUM.}

\author{
By Dr. Paul Ruben.
}

The verses Nahum i, I2, unto ii, I4, form a literary unity. It is rue, they are interrupted, as Wellhausen has seen, by some lines of quite a different character (i, \(\mathrm{I}_{3}, \mathrm{ii}, \mathrm{I}, 3\) ), which we must discard; but apart from this, the verses beginning ' \(\boldsymbol{\sim}\) and ending לא יא ישמע עוד קול מלאבבה complete in itself.

The book of Nahum bas been a favourite subject with biblical students during late years, Wellhausen, Gunkel, Jeremias, Billerbeck. Nowack, having done their best to elucidate the meaning of obscure words and passages. More especially Adolf Billerbeck, a retired colonel of the German army, has tried to throw light upon the text with the help of a thorough military study of the Assyrian fortifications, Nineveh itself being perhaps the most perfectly preserved example of an ancient fortress throughout the whole of Western Asia.*

Whilst trying to put an entirely new construction upon some passages, I shall refrain from discussing all that scholars, ancient and modern, have said upon every word and sentence of our oracle. But before commencing the interpretation proper, I should like to make two general remarks.

First.-The whole prophecy is written in lines or arixol, every \(\sigma \pi i \chi o s\) consisting of two or three кî̀ \(\lambda a\). This division of the \(\sigma \pi i \chi o r\) is apparent wherever the text is clear and intact beyond doubt. On the other hand, we frequently notice that evident corruptions of the text generally involve the non-appearance of the rythmic division.

Secondly.-Wherever the Hebrew dictionary does not supply us with a perfectly satisfactory explanation of a word, we are entitled to avail ourselves of the dictionaries of other Semitic languages.

\footnotetext{
* v. Beiträge zur Assyriologie (Delitzsch and Haupt), III, I, p. II4, sqq.
}

The following are two examples, which will establish this principle beyond doult.
 שימלמים ובן רבים ובן ביוחו וֹבר, and is usually translated: "Thus saith the Lord: Though they be quiet and likewise many, yet thus shall they be cut down, when he shall pass through," or "Thus saith the Lord: If they would have been at peace, so should they have been many, and so should they have been shorn, and he should have passed away." Nobody would quote these words as a specimen of Nahum's forcible and perspicuous style.
 (רבים רים ובים (before i.e, they did not read the first , which has apparently crept in from the next кîגor. That מים רבים is the true reading has already been observed by others; compare Nah. i, 8, "But with an overruming flood He will make an utter end of His enemies."* But what is hidden in the letters sat No doubt, the imperfect tense of a verb, the subject of which is the Lord, and the object גים רבים, and which has some such meaning as "I shall send, I shall summon, I shall cause to flow." Now Arabic "' has the signification "to flow," and I have
 instead of The : "Thus saith the Lord: I shall cause to flow mighty waters."

The seventh and eighth verses of the second chapter run:

\section*{שערי הההרות :צתחו. וההיבל במוג : והצב גלתה העלתה ואמהתיה מיהגות בקול יוּים מתופפות על לבבהן :}

Because of the suffix of \(\mathrm{T}_{\mathrm{T}}\) ("and her maidens") exegetes have known long ago, that the name or the title of the Assyrian Queen must be bidden somewhere in the preceding words. Now
 the \(\boldsymbol{T}\) of this word as the article. A most useful hint, for it induces
 so as to form one nî̀nor. It is a subdivided nüdor, which frequently occurs in Nahum's book, and which usually consists of four or

\footnotetext{
* Instead of בקיבק (L.NX, Buhl).
}
occasionally of five words, with a little interpunction in the middle,
 iii, 3 , ולהב דרב וברק דצית.
 next one beginning העלתה, in which that Assyrian name or title must be hidden. Now Assyrian etellu, fem. etellitu, means "great, high, exalted,"* and as substantive "Lord," fem. "Lady"; it is used of kings and gods. I read therefore והעתלה ואמהתיה ,מבהגות, "and the Lady and her maidens are sighing." \(\dagger\)

But let us not yet put aside the Assyrian dictionary. If the

 גלת in Assyrian is "to be frightened," whilst the Assyrian form corresponding to the Hebrew Piel signifies "to frighten." The nề or means, therefore, "The palace is terrified and the Ṣab is frightened."

And now let us begin the interpretation proper.
i, i2. The words בה אממר •• רבים I have already explained. Then the Masoretic text goes on, ובן גמזו ועברך. We must, of course, read ועברו, as Wellhausen does, and must refer this verb to the waters, עבר frequently meaning "to flow," com. Is. viii, 8 ; liv, 9 ; Nah. i, 8. And it is to the waters that we must also apply iza, I propose to read יִּנְּרוּ "they will stream and flow." \(\ddagger\) But what
 defining the mode of flowing, as רבבים explains the substantive מים. In Arabic ;-́ك means "ran quickly," "sped onwards"; possibly Nahum wrote וָָּ, an adverbial infinitive, cf. ,םרו מהר מן הזרך "Quickly they shall stream and flow."

ועבתתך לא אעצך עוד. These words are usually translated, "Though I have afflicted thee, I will not afflict thee any more."

\footnotetext{
* I quote from Delitzsch's dictionary, that splendid work of reference, without the help of which the present remarks would never have been offered.
\(\dagger\) My correction of העתלה was published in the Academy as long ago as March, 1896.
\(\ddagger\) Peshita translates דגר "quæ rapuerunt." This version is occasionally nfluenced liy the LXX.
}

But though no objection can be offered to this translation, we must not forget that "le meilleur est l'ennemi du bon." The L.XX
 shall never again be heard of." This implies that they read . Is this mere guess work? Did they wilfully change the \(N\) of into \(ת\) and the into \(\boldsymbol{N}\) ? do not believe it ; both these interchanges have very often taken place in manuscripts of the Old Testament without being caused by clerical arbitrariness. But the translation may be guess work. Certainly. But very clever guess work. In a text published by Mr. Pinches * the following words occur: "suruskussu ina is zag.sal lizzamirma, tanittas̆u leïni"; they are translated by Delitzsch, "his sublimity shall be celebrated on the Z (a musical instrument) and his praise shall resound." Here we have an Assyrian root אמבה, "to sound," some forms of which have, I believe, been preserved to us in the Hebrew characters of our passage. I read ועבתך לא ,תַבְבֵּה עצוד, and translate, "And the sound of thy name shall no longer resound."
v. \(\mathrm{I}_{3}\) has been rejected by Wellhausen: v. it presents no difficulties; it ends with קברך ; the words must not be connected with this verse. They may be a corruption of בי עלה + and probably belong to the beginning of the second verse of the second chapter, this verse being the continuation of our verse. For the first verse of the second chapter must be discarded, as Wellhausen has already recognised.

Chapter ii, r. 2. Instead of
 acceptable. \(\ddagger\) We must, however, read \(\underset{\sim}{\ddagger}\), for Wellhausen has conclusively shown that throughout the whole oracle a male being is addressed (i.e. Assur). Instead of בַּצָּרה we must read, this change being suggested by the LAX and l'eshita. צצר מצברה means, "Be on the watch."
- T. Texts in the Rablonian Witle-Writing, 1, p. I6, Rev. II.
+ The same interchange of letters has taken place, llos. vii, 3 ; ברעת M. T.
+We may, however, letain the reading \(\rceil\) " causes to overflow." Comp, Zach. i, 17 ; l'rur. v, 16 ; \(I_{0}\), xl, if.

We must discard v． 3 （Wellhausen）．
v．＋．This verse is usually translated＂the shield of his mighty men is made red，the valiant men are in scarlet，the chariots shall be with flaming torches in the day of his preparation，＂or something to that effect；some scholars read באשׁ instead of בטש゙ ；others display considerable learning on the subject of red uniforms ；but it is remarkable that these explanations are very far from finding general approval．

Let us turn to the old versions．מתבלעים is translated by the
 mock，＂and is generally constructed with the preposition 7 ．Is it then so very difficult to see that באשׁ is a defective writing for ＂בְִּיִי゙？＂The valiant men mock at man，＂comp．Hab．i，9． ＂And they shall scoff at the kings，and the princes shall be a scom
 it was already understood by the LXX．Still \(ן \geq 2\) remains obscure； but it is evidently parallel to an an it is hardly an accident that Arabic－ jested．＂I write \(\underset{\sim}{2} \underset{\sim}{\underset{T}{2}}, ~ a n d ~ a c c o r d i n g l y ~ t r a n s l a t e ~ t h e ~ f i r s t ~ \kappa \hat{u} \lambda 儿\) ： ＂Overbearing are his warriors with more than human pride；the valiant ones mock at man．＂In the third \(\kappa \hat{\omega} \lambda o r\) הרבב is subject，and consequently פלדרת predicate．We may perhaps identify פלדת with שליצות，as Perles＊has identified מדע（Ecclesiastes \(x, 20\) ） with juュ．The interchange of Dāl and Dad is not unusual in Arabic dialects（v．Hirschfeld in J．R．A．S．，i 891，p．308）．I throw out this suggestion for what it is worth．My rendering will then be， ＂A terror are the chariots in the hour of their readiness＂（comp． Prov．xxi， 3 I）．

With a new verse begins，and with this verse the description of what is going on outside the town，what the beleaguered－or rather those surprised by the enemy－try to do for their defence．We must join the words והברשים הרעלו בהוצות as the LXX does，and must read ירעתו instead of הרעללו and
 Observe that the second and the third кî̀a are subdivided．

\footnotetext{
＊Analekten sur texthritik des Alten Testaments，p． 7 I ．
}
and it is for this reason that some scholars have supposed to be here a feminine, whilst others
 culine suffix in a popular song quoted by Ezekiel in his twentythird chapter, where the suffixes of תזמותיהן ,ראשיהן ,ידיהן refer to the men, not to the girl.* No certain version of the words ישתקשקון and ירצבלו ; exists ישתקשジן ,יתהולעו ,ירעלו may refer to tactical formations.
v. 6. The beginning of this verse is thus translated by the LXX:
 боиби \({ }^{\text {וr }}\) וnstead of the Masoretic Wer bing confirmed by the Targum. We immediately see that ביום יבֵּלו בהליבתם form one кйגor: "In broad daylight they stumble on their march ;" ff. Is. lix, ro, " We stumble at noon-day as in the night." Nowack is quite right, when he thinks that Nahum is here speaking of the infantry; but what were the exact words the prophet used? ומסו all probability is the predicate of the preceding kiwhor, and ought therefore le emended to יצפי. has in one passage the verb meaning to hurry, "to hasten," and does not signify "to flee away." I refer to "Is. xix, 16, לזא בי על סום בום, "No, but on horses will we fly" (Cheyne), where-remarkably enough-we have not the prophet's own language, but he quotes other people's words. In our passage, where the prophet does not speak of flight, but of a rapid march from the town barracks to the walls (יביהרו חבתתה), יבסו can only mean "they hurry onwards."

Now the suffix of somidently points to somebody with whom these אדירים are connected ; as we have already seen, this can only be the infantry, and it is to this substantive that the letters \(\begin{gathered}\text { ו } \\ \text { refer. The Assyrian word for infantry is "su-ku," }\end{gathered}\) and it is, I think, more than probable that Nahum said , וַאדיריהם יָּשֶו, "And thy infantry with their officers \(\dagger\) hurry onwards."

\footnotetext{
* I have tried to restore the text of that song in my Critical himarks, p. 22, but I was mitaken when introducing in these three cases the termination

}

What the words וֹהבן הסבד mean can only be guessed, but in order that even our guessing should pursue the right course, we must briefly glance at the map of Nineveh.

Nineveh* was situated where the Choser disembogues into the Tigris, and formed an irregular quadrangle. On the western side of it two hills rose, crowned with royal buildings-these hills are now called Kuyundschik and Nehi-Yunus. The latter rises to-day to nearly 30 metres above the Tigris, the Kuyundschik still a little higher. But apart from these hills the western part of the town was lower than the eastern. The Choser flowed through the city in two beds, a northern and a southern; the northern was a canal, the southern was the natural course, and entered the town by three sluices, the remainders of which are still preserved.

The whole place was surrounded by walls, the materials for which were partly furnished by the moats which surrounded the walls on two sides (north-west and east), the western wall being protected by the Tigris, the southern by a rivulet. The western wall was 4,300 metres long, \(\dagger\) the eastern 5,000 , the northern 2,000 , the southern Soo. Between the north-west and east walls and their moats there is a space of varying breadth, which is never narrower than 50 metres. The average breadth of the moats is 45 metres. \(\ddagger\)

These moats, the sides of which are quite perpendicular, and all hewn out of the rock, were filled by the Choser and divided by batardeaus-i.c., dams with sluices-into several basins, in order to regulate the level of the water. § At the western and southern points of the fortress the moats were connected with the Tigris and with the rivulet.

Of the outer fortifications I must mention those in front of the southern part of the eastern wall ; a crescent-shaped bulwark and a gigantic double wall more than 4,000 metres in length east of this bulwark. Nahum's entire idea of the manner in which Nineveh was to be destroyed-that it was to be taken by surprise and devastated by water-could hardly have been thought of at a time when that bulwark and those big outer walls were already in exist-

\footnotetext{
* v. Jeremias and Billerbeck, l.c., pp. in8-i27.
+ To-day the foot of the wall is still 7 -IO metres higher than the lowest level of the Tigris.
\(\ddagger\) They are now \(3 \frac{1}{2}\) to 4 metres deep, their original depth is unknown.
§ In Billerbeck's map the sites which are still preserved are indicated by \(\mathrm{B}_{1} \mathrm{~B}_{2}\), ctc., whilst small \(\mathrm{b}_{1} \mathrm{~b}_{2}\) refer to conjectural batardeaus.
}
ence and kept by a sufficient number of defenders. Colonel Billerbeck's words are therefore remarkable-ard perhaps useful for the chronology of our oracle; he says: "Several reasons bear out the suggestion that the high outer wall was built by Assurbanipal in a hurry during the great Susian war." *

Now Nahum says-in the ninth verse of our chapter, "And Nineveh has become like a pool of water"; and as we have no right to interpret these words otherwise than literally, we must assume that according to the expectation of the prophet the whole town, or at least its lower parts, would be imundated by water, the walls. forming, so to say, the edges of the pool ; and that this would take place by means of those "mighty waters" which the Lord promised to send at the beginning of this prophecy. As has already heen observed by the commander Jones, \(\dagger\) who together with Dr. Hyslop mapped the whole site as early as 1852 , an inundation can only have been caused by the Choser, not by the Tigris. Then the words of v .7 , "the gates of the rivers are opened," refer to the sluices by which, at two points, as we have already seen, the Choser could enter the town; according to this prophecy, they were not to be opened by the natural force of the swollen river, but by the hand of the enemy, which the author has taken pains to describe. We can quite understand how the royal family, looking down from the acropolis and seeing the waters enter the town, was seized with fear (ההיבל בּיוג). Two difficulties, however, were to be overcome. if the town was to be filled with water. First, the outlets of the Choser had to be stopped ; and, secondly, the moats that surrounded the fortress, and that were usually filled by the waters of the Choser, had to be shut, in order to concentrate the whole power of the water to the inner town. Everybody who has observed a swollen river in the mountains, will have seen that its current bears down with it heaps of stones and trees, which in a very short time bar its bed and so cause inundations. That is very natural, and Nahum may have foreseen it with regard to the Choser, without saying so explicitly. But the barring of the moats had to be done by the

\footnotetext{
* To the building of this wall the words of Nahum (iii, I4, I5) may refer : "Wraw the waters for the siege, fortify thy strongholds; go into clay and tread the mortar, make strong the brick-hiln; there shall the fire devour thee, the sworl hall cut thee off."
+ \(\therefore\) J.K.A.S., 15, ए. 297 Squ.
}
enemy，and it seems to be this that Nahum foretells in the words ．והבן הסבך．The Targum and the LXX seem to have read a plural form both of the verb and of the substantive ；they point to
 sides of a canal，or，as Carl Bezold translates it in one of Neriglissar＇s inscriptions，＊its bed．Whilst I do not doubt that this word has been used here by Nahum，I am not bold enough to assert anything about the origin of רדבבו；the meaning is probably，＂and closed is the bed of the moats．＂\(\dagger\)

I have already said that I do not know the meaning of \(\mathbf{Z}\) ：v．io， but I must mention that one of de Rossi＇s codices has in v．ויבּבת 9 instead of וביבוּ ；והבצבת may be a misplaced varia lectio for והתבב，and may perhaps one day lead to its elucidation．\(\ddagger\)

V．9．The Masoretic text reads וביבוה בברבת עיב ביחֵי היא וֹא ．The words＂Stand，stand，＂ are apparently a command given by the officers to the soldiers；but what is מימעי היא and Instead of מימי היא the LNX reads מימיה，and I will say without further circumlocution that and stand for the same word；this word must be the subject of anana，containing as it does the termination must refer to ביבוה，and must therefore mean something like＂her defenders．＂If we now bear in mind the number of Arabic words that occur in our prophecy，and that Arabic means＂to defend，＂the reading דובֶירָ，＂her defenders，＂may appear to be a

\footnotetext{
＊I．Schrader＇s Kélinsikriftliche bibliothek III，2，pp．74，75，＂la ih－na－a sut uk－ki－sut ．．i－na ku－up－ri un－sut－ri ab－na－a sut－uk－ki－su，＂＇＇He had not built its bed ．．．I built its bed with tiles and bricks．＇＂
＋Instead of והבת：we ought perhaps to write bearing in mind the Assyrian phrase＂ku－un daltum，＇to close the door＇＂（see Delitzsch，Assyrisches

 ，ובהנו or in either case this verbal form is a perfect and not an imperfect ； showing us that this verb does not continue the narrative began by מיהרו， トン・ン・，，but interrupts it ；and indeed，after the bad omen suggested in the words，＂they stumble on their march，＂we are quite prepared to expect that this forced march is to le crowned by a disappointment－they come too late． Perhaps
\(\ddagger V\) ．Jeremias in Beitrïge zur Assyriologic（Delitzsch and Haupt），III，I，p． 102；הנצרת？
}
good conjecture，especially as the origin of both the readings
 conjecture，but is undoubtedly the original reading．That invalu－ able codex of the \(1 . \mathrm{AX}\) ，the Codex Alexandrinus，reads rix！＂iraza

 preserves the first three letters of that word．It is likewise only the Codex Alexandrinus that reads at the beginning of this line rai
 （or フニフユロ）is the predicate of ה！ミワ．Perhaps we must insert after הาละ the word התּ，＂has become，＂taking into account the iju of the Codex Alexandrinus．

In v．iz I propose reading with Wehhausen הר゙ッ，＂cave，＂
 （comp）．the LXI），instead of
 which comes nearer to the accurate reading．The prophet certainly means to say＂thy den，＂and we accordingly read הבユาผ；
 dens．＂
＇Two questions now present themselves to us：－
First．At what time was this oracle written？Has it，perhaps， any connection with Diodorus＇narrative that Nineveh was actually destroyed through an inundation of the river \((2,27)\) ？But I should like to defer the answer until the text of the other chapters has been restored．

Secondly．How can we explain the linguistic peculiarities of our prophecy？Two of these，the temmination in instead of an（in
 in the Old Testament，at places where－we must bear in mind－a popular saying or a popular song is quoted，and we are probably right in assuming that，what makes the language of our piece so very strange，is partly its popular character．

With regard to the Assyrian words הミM，＂to sound，＂ TV，\(^{\text {W }}\)
 ＂lady，＂there is at least a possibility of explaining them．The author may have lived in Assyria，the capital of which he seems to know very well，and quite naturally incorporated into his language Assyrian words．We have no proof that an Israclitish community 182
lived in the neighbourhood, but it is more than likely that such was the case, and that Nahum merely availed himself of a dialect which was au courcult and appealed to by a body of his compatriots.
 hurry," 'نَ "to be impertinent," defend "). This is the difficult problem which this oracle propounds. It is a difficulty, the existence of which we must respect, and not by any means try to explain away. For I am not able to explain it.

Text.
[I have enclosed within brackets those words, the restoration of which is uncertain.]

Translation.
i. 12 Thus saith the Lord: || I shall cause to flow mighty waters,
Quickly shall they stream and run \(\|\) and the sound of thy name shall no longer resound.

14 And the Lord has given a commandment concerning thee \| that no more of thy issue shall be sown,
Out of the house of thy gods will I cut off the graven image || and the molten image I will make thy grave.
ii. 2 For he, who is to cause thy inundation, has come up before thy battlements \(\|\) mount the guard, watch the way || make thy loins strong, fortify thy power mightly.

4 Overbearing are his warriors with more than human pride || the valiant ones make sport with man || a terror are the chariots in the hour of their preparation.
5 And the horses rattle in the streets || the chariots rage, and jostle one against another in the broad way, \| they seem like torches, like the lightnings they run.
6 And thy infantry with their officers hurry onwards || in broad daylight they stumble on their march || they make haste to the wall, and closed in the bed of the moats.

7 The gates of the rivers are opened || the palace trembles and the Sab is frightened.
\& And the Queen and her maids moan | as with the voice of doves, || tabering upon their breasts.
9 And Ninereh has become like a pool of water \| and her defenders fleeing || "stand, stand" but none shall look back.

1o Take se the spoil of silver, take the spoil of gold \| and infinite store \(\| i\) and the mass of ali precious vessels.
II She is empty and void and waste \(\|\) and the heart melteth and the knees smite together,
And much pain is in all loins \(\|\) and the faces of all withdraw their colour.

12 Where is the dwelling of the lions || and the care of the young lions,
Where the lion walked in order to pass the night \| and the lion's whelp, and none made them afraid.
\({ }_{13}\) The lion, that tore in pieces enough for his whelps | and strangled for his lionesses || and filled his holes with prey | and his dens with ravin?

If Behold I am against thee, says the Lord of hosts, And I will burn thy den in the smoke \(\|\) and the sword shall devour thy young lions,
And I will cut off thy prey from the earth || and the voice of thy messengers shall no more be heard.

\title{
USHABTI-BOX OF NES-PA-CHRED, A PRIEST OF MENTU.
}
By IV. L. NAsh, I'S.il.

This Ushabti-box was found at Thebes. It is of wood, and measures \(I_{3}\) inches in length, \(6 \frac{1}{3}\) inches in depth, and \(5 \frac{3}{4}\) inches in width. 'The ends of the box are 3 inches higher than the front and back, and are rounded at the top. 'The lid, which is missing, must therefore have been semi-circular. The surface is covered with a coating of white lime, on which the hieroglyphics are written in bhe. All four surfaces were inscribed, but the characters on the back are so defaced as to be illegible. The translation, for the revision and correction of which I am indebted to Mr. F. Ll. Griffith, F.S.A., commences at the left-hand of the front, is continued on the right end, on the back, and finishes on the left end. It reads:-

Front.-"Speil spoken by the Osiris, Priest of Mentu Lord of Uast, Nes-pa-chred, deceased, Son of Priest of Mentu Lord of Uast."
Rishtend.—" Bes-en-mut deceased. Oh, Ushabti."
Left-end.-"Smite down obstructions there for a person . . . . ."
Dr. A. Wiedemam (Frocedings, Vol. XI, p. 69) drew attention to the sarcophagi and other objects relating to the Priests of Mont, which were found in their family tomb at Der el Bahari in 1850. gives the following genealogy :-

Nes-pa-chred, for whom my Ushahti-bos was made, would a'pear to have been a brother of User-Mont, unless he was the son of some later lies-en-mut than appears on 1r. Wiedemann's hist.

\section*{PLATE II.}

\section*{THE KU'THAAN LEGEND OF THE CREATION.}

Dear Mr. Rylands,
In the last number of the Recueil de Trazaux relatifs ì lit Philologie et à PArchóologie Égrptiennes et Assyriennes (xx, 1, z), Dr. Scheil has published a very curious text, which he believes to "prove the existence of a new king," Tukulti-bil-nisi. The text is, however, a variant either of part or of the whole of that which Mr. George Smith regarded as the Kuthæan Legend of the Creation, the true meaning of which, in consequence of its mutilated condition, is still enigmatical. I have often thought of publishing it, along with certain other texts of which I made copies many years ago, but other work, and perhaps the laziness of advancing years, have hindered my doing so, and I now learn from Luzac's Oriental List that my neglected duty has been performed by Prof. Zimmern. Dr. Scheil's inscription throws a little light upon the Kuthrean text, as it seems to show that the latter has nothing to do with the story of the creation.

I published a translation of the Kuthæan text in 1888 in the first volume of the new series of the Records of the Past (pp. 147-53). A reference to the volume will show that the portion of the new tablet which Dr. Scheil has copied and translated corresponds with column I, line 19, to column II, line 4, of the Kuthran legend. But there are several variations; the new text contains interpolations, and one or two passages in it which are not intelligible as they stand, will have to be corrected by the Kuthæan version. Unfortunately here in Egypt, where I am writing, I have not got my copy of the Kuthæan version, and consequently have to work back to it from memory through the help of my translation in the Records of the Past.

Dr. Scheil's text must be translated as follows :-
"It was utterly smitten; not a man remained alive.
In the second (year) an army of 120,000 (two sosses of thousands) I sent forth, and
it was utterly smitten ; it filled the plain (with the dead).
In the third (year) an army of 60,000 I sent forth, and
1 multiplied it more than before.
After it had overcome (?) an army of 360,000
it was smitten with utter destruction.
1, 'Tukulti-bel-nisi,
was in woe (akula), in sorrow and trouble, and I cried out
saying : verily it is I, and yet what have I left to reign over ?
I am a king who saves not his country ([ma-]ti),
and a shepherd who saves not his people.
As for me what have 1 left to reign over?
Since I have caused corpses
to be thrown on (the earth), and have sent forth an army to destroy the plain of Akkad.
The mighty foe gathered together (his forces)."
With this let us compare the corresponding lines in the Kuthran tablet :-
" The first year as it passed
120,000 warriors I sent forth, and among them
not one returned alive.
The second year as it passed I sent forth 90,000 warriors, and none returned alive.
The third year as it passed I sent forth 60,700 , and none returned alive.
They were carried away, they were smitten with destruction. I was in woe,
and trouble and anguish.
Thus did I speak to my heart, saying: Verily it is I, and yet what have I left to reign over ?
I am a king who sares not his country, and a shepherd who saves not his people.
Since I have caused corpses to be thrown on (the earth) and have left a desert."
There is nothing said here cither about Tukulti-bil-nisi or the destruction of the phain of Akkad, and it is therefore a question whether or not they are interpolations in the text discovered by 1)r. Scheil.

It is possible that the legend contained in the two texts was similar to the Eryptian story of the destruction of rebellious
mankind by the god Ra, but modified by the Chaldæan doctrine that the rebels were the brood of Tiamat the dragon of Chaos, and a sort of first attempt in the way of creating man, not the real ancestors of the present human race. If so, the story would have described how those pre-human men, whose city was underground, were destroyed, and the earth made ready to receive its present inhabitants. They are said to have been composite creatures of monstrous aspect: "warriors with the body of a bird of the valley, men with the faces of ravens," such as were depicted on the walls of the temple of Bel.

\section*{ROMAN INSCRIPTIONS RELATING TO HADRIANS JEIVISH WAR.}
\[
\text { May } 21, \text { ISgS. }
\]

Dear Mr. Rylinds,
Since the publication of my remarks upon " Roman Inscriptions relating to Hadrian's Jewish War." two new texts have been discovered, throwing additional light upon the subject. One of these is an inscription from Amwas (Nicopolis), confirming the presence there about the time of Titus of the Legio V Macedonica, and should be added to the evidence given upon page 8 of the present volume of the Proceedings. It reads as follows: " Lucius Sabinius Amasio miles legionis V Macedonicae, centuria Stimini annorum .XXV militavit.*

The other text is nothing less than the recovery of the missing half (tabella posterior) of the new Syrian military diploma of the time of Hadrian, containing the names of some twelve witnesses to the diploma, so that document is now entirely complete. \(\dagger\)

> Yours truly,
> JOSEPH OFFORD.

Par Karl Pieht..
Premier Article.

 nouveau; : 6 . La lecture des deux titres pharaoniques A ct कn).
S. Au temple d'Edfou, on rencontre, par-ci par-là, un groupe \(\square \dot{\square}\) que, dans mon ourrage consacré à ce monument, * jai regardé comme exact, sans dailleurs me prononcer sur la lecture à y attribuer. Dans 1'"Avant-Propos du Temple d'Edfou," qui vient de paraitre, l'auteur, M. (i. Maspero (p. ix), décrète que le groupe en question est à regarder comme une inexactitude commise par moi, inexactitude qu’aurait évité de commettre M. Maspero luimême, dans sa copie correspondant à la page 5 I , ligne 5 , de mon ouvrage cité. Suivant ce savant, pour être exact, j'aurais dû, comme lui, lire \(\square\) le groupe en question.

Cette affirmation de lhonorable savant français se montre particulì̀rement malheureuse, puisque, à la page 370 (ligne 6) de son "Temple d'Edfou," on rencontre justement ceci: \(\stackrel{\text { sic }}{\square}\), d'accord arec ce que donne (page 43 , ligne 4) ma publication susmentionnée, citée et employée par lui.

Il y a donc assurément un mot \(\square \triangleright\), malgré lassertion contraire de M. Mapero. Quelle est donc la lecture de ce mot? Le signe \(\square\) ayant plusieurs raleurs, notamment celles \(\dagger\) de usech, \(\bar{a}\), on

\footnotetext{
* Cfr. P'math, Inscriftions Mírostyphiques. Seconde Série, Upsala, ISgo, I'l. Xl.Ill, ligne + ; Ill. Ll, ligne 5 ; l'l. LII, ligne 2, etc.
\(\dagger\) lour ctre complet, il faut aussi énumérer les valeurs b, han, äb et cüt.
}
pourrait répondre à cette question de différentes manières. En lisant notre groupe usech-t, litt. "la vaste," on aurait là une bonne désignation du ciel. Pourtant, si je préfère le lire \(\bar{l}-t\), c'est que je regarde \(\square \circ\) comme une variante du mot fréquent \(\stackrel{\square}{\square} \stackrel{\bar{d}-t \text {, }}{\square}\) que nous connaissons, depuis longtemps, grâce à Brugsch.*

Gardons alors toujours le mot \(\square \circ \bar{a} t\), "ciel," et donnons-lui de la place au Dictionnaire. [Voir plus loin une "Note additionnelle"].
§ 2. Dans son Dictionnaire Hiéroglyphique, Brugsch a consacré un article spécial à un groupe fon , lequel est expliqué par lui ainsi: "subst. wie es scheint" Gelenk "oder vielleicht auch, "Knochen bedeutend." Le seul passage de texte qu'a cité Brugsch † (vol. l, page 26) pour le mot en question est celui-ci: \(-\mathbb{O Q}\)
 sind seine Gelenke (Knochen ?)." Cette traduction de Brugsch étant incorrecte, il faut la rectifier \(\ddagger\) et la remplacer par celle-ci: ("Les dieux Anubis qui accompagnent Osiris et réunissent les membres de l'âriee entičre), ceux qui préparent l'embaumement de ses membres et emmaillotent ses os."

A cet exemple on peut ajouter les suivants:
 veloppés sont) tes os par les ceuvres des embaumeurs." s.
 purifie tes os, et te purifie à l'aide de ce qui sort d'elle-même." ||
* Brugsch, Hieroslyphisch-Demotisches W'ötertuch, I, page 163.
+ Un débutant d'égyptologie m'a fait remarquer dernièrement que " Brucsch a traduit, il y a fort longtemps, dans sun Dictionnaire par 'Knochen.'" Mais comme on voit, cette affirmation n'est nullement exacte, puisque le grand savant allemand a hésité entre "Gelenk "et "Knochen " comme sens du mot en question. Aris au dit débutant.
\(\ddagger\) En rectifiant Brugsche, nous ferons remarquer que cela se fait très souvent à l'aide de lui-même. Il nous a donné un si puissant instrument de travail en son Dictionnaire que, pendant des générations encore, celui-là servira de guide aux ésyptologues. Cela est bon à inculquer dans les cerveaux bornés de certaines jeunes gens, oublieux des mérites du plus grand égyptologue après l'éporpue de Champollion.
§ Lieblein, Le livre égyptien "que mon nom fleurisse," page 70.
|| Mariette, Denlerah, III, page 5I, 1 .
 "Horus, adolescent, seigneur de la masse, qui tranche * les têtes, qui brise les os." †

 Achut, . . ........, tes os sont en bon état, à la faveur de l'ceil d'Horus blanc . . . . ."

Le mot achach s'explique étymologiquement par le verhe fréquent通 "verdoyer, pousser," ce qui montre qu'en appellant l'os achuch, on l'a comparé avec une plante, une matière végétale. La présence du signe 㖊, comme déterminatif du groupe qui nous occupe, dérive de l'emploi des os-spécialement le tibia-aux temps préhistoriques en qualité de žrilles. L'usage de se servir des tivice en qualité d'instruments à vriller, date au moins de l'âge de la pierre polie, où l'on pratiquait souvent les trous d'emmanchure des haches en pierre à l'aide d'os longs qui, à force d'un travail patient, perforaient l'instrument.
 appuyer la thèse 'fue nous soutenons, suivant laquelle le af simple représente une " vrille," et non pas un ciseru, comme le prétend E. de Rougé.s

Voilà donc des preuses en faveur du sens "os" du groupes 3 le mot en question. |l Il est intéressant de noter, à côté de la furme
* Les éditeurs du "Temple d'Edfun "ont ici inventé un mot jusqu"ici incomnu \(\rightarrow\), qui doit étre corrigé et rectifici it \(\underset{\sim}{\longrightarrow}\), vocable fréquent seton Bruciscle.

§ M．Loret［Kictueil，AVIII，page 177］semble regarder（D）de cet exemple comme identique de sens à \(\stackrel{\square}{\square}\)（）＂aine，pis．＂Mais \(D\) signifiant par－ tout ailleurs＂derrière，arrière－train，＂je ne puis admettre cette thèse．Il me semble que l＇emploi de \(\quad\) ）de notre exemple－comme pour d＇autres analogues à celui－la＇－est une manière de＂transcrire＂la notion un peu vulgaire de＂aine．＂ Le langage se sert bien souvent de synonymes moins exprics：ifs pour dé igner ce qui est censé un pen grossier on vulgaire．
}

 Scha-llor, régale-t'en, en rajemissint tes membres."*

 régale-t'en, tes membres étant vivants." \(\dagger\)

La façon dont, dans ces exemples, le mot àmeḷ s'écrit-déterminé de \(\leftrightharpoons\) ou de \(\Longleftrightarrow\) ou de \(\nabla\)-indique que le sens en a rapport au goût, aux organes de la mastication. Au point de vue idéographique, notre traduction " avaler, se régaler de, goûter, sucer," du groupe \(\dot{a} m e \neq\) est donc parfaitement autorisée. Il faut reconnaitre que le contexte des passages cités aussi corrobore notre acception ì cet égard.

En cherchant au dictionnaire copte l'équivalent de 4\(\}_{1}^{\prime} \&\), nous pensons qu'on pourrait le retrouver en cee\&2, I ou єel\&21,
* he Rormenonten, itht, page 367 . Une variante de sens de ce passage

S Lee déterminatif de \(4 \rightleftarrows \infty\) del'exemple \(d\), est sans doute une faute ponr \(\leftrightharpoons\).
mot bohairique signifiant, suivant Peyron, vi capere, ncupare, etc.* Il est d'ailleurs fort possible que \(2 \boldsymbol{2} \& 8\) dérive de \(\boldsymbol{\mu}\) or 2 , de même que le verbe zorwn dérive de orwn afcrire, par suite de la soudure à la racine de la caractéristique \& de l"impératif, l'origine de \& s'étant pour ainsi dire oubliée.
§ 5. Un autre verbe ayant le sens de "avaler, goîter," etc., dont l'existence est également ignorée par le Dictionnaire, c'est celui de运 \({ }^{*} \nabla\). En voici quelques spécimens:-
 SR "II "Roi de la Haute et de la Basse Egypte, celui qui anéantit * La différence de sens quiil parait y avoir entre \(4<\) eit \&ee\&\&, ne fait aucun obstacle absoln au rapprochement proposé. Une action sappelle de différentes façons, suivant le "Noment" de cette action qu'on souligne particulièrement. C'est ainsi qu'un mot qui signifie rire peut telle fois se traduire pleurer, juste comme si la vieille thèse, "lucus a non lucendo," était étymologiquement autorisée. Dans ces circonstances, je trove parfaitement ridicule l'essai fait par un commençant de vouloir rectifier ma traduction [P'ıEH1, Seconde Série, II, p. IS], "Le grand siège du Soleil est délivée du mal" de l'expression
 place de Ra est cncensíe (parfumée) contre le mal," tout en ajoutant: "C'est-àdire que l'on y a brûlé les parfums dont la fumée a la proprieté d’éloigner les génies contraires." - La raison de ce que l'on brûlait des parfums à lintérieur des temples était d'origine purement matérielle: on voulait nttoyer ce qui avait été sali, souillé d'une manière ou d'une autre ; on poursmivait done par là un but de propreté et de salubrité, chose d’autant plus naturelle que, par extmple, les sacrifices de certaines bêtes, etc., devaient laisser des traces de malpropreté et causer des odeurs funestes, dans la chaleur qui régnait partout. Plus tard, on a pu fort bien identifier ces immondices à des êtres surnaturels quill fallait combattre avec des moyens prophylactiques sous forme dencens, etc. La traduction "délivrer" de senter est d'ailleurs prouvée, pour notre passage de texte, par le contexte, où le parallélinme des membres nous dévoile la présence de synonymes comme "écarter," " nettoyer," etc. La quasi-critique à laquelle nous avons été exposé, quand nous avons traduit \(\stackrel{\text { ing }}{\circ} \circ\) " "délivrer," représente un essai d'accréditer les traductions littérales, au sujet desquelles nous arons dit [Seconde Série, II, page 52, note 1]: "La méthode qui s'applique à cette sorte de traductions, part de l'une des deux suppositions éminemment naives, ou que chaque mot aurait ain sens difini it inaltiralle, ou bien que le sens, historiquement originaire, fournirait nécessairement lexplication de chaque énigme de sens. A-t-on besoin de réfuter, an NIN" siècle, de pareilles puérilités !"
des milliers, seigneur, celui qui broie des miyriades, Sa-Hor qui immole les rebelles, et qui fait tomber ses ennemis." *
 ce qu'il lui donne." †
c. 迫

 merti, qui immole les cceurs hā̄ti, qui croque les cheurs \(\dot{a} b\), qui avale les foies des compagnons de Set."

Le déterminatif \(\triangleright, \infty\), qu'a le mot t'ames de ces exemples, montre que le sens en désigne une activité des organes de la mastication. Le parallélisme des membres corrobore, d'ailleurs, pour l'exemple \(d\), cette supposition, bien que le sens de "détruire, maltraiter," sur la foi de l'exemple \(a\), parait être l'originaire.

C"est du copte Gorse, zorse, zis, ziolentia, injuria, que nous serions tenté de rapprocher le mot hiéroglyphique for et var. L'échange de \(m\) contre \(n\) qui se serait produit dans ce cas, n'est point plus exceptionel que celui des mêmes lettres pour l'équivalent copte de l'ancien orin se lit \(\sigma\) inte, en bohairique xeel.

S6. La lecture du groupe n'i pas été prourée jusqu’ici, malgré l'habitude quont plusieurs egyptologues de la transcrire tout bomement sm; \(\boldsymbol{i}\) 't. Cette transcription, proposée [Zeitschrift, XXIX, page 58] par M. Ermin, nous l'avions démontrée impossible, dans un article antérieur des Procecdings. || La seule raison invoquée par notre confrère de Berlin, jentends la prétendue transcription

P11:11., Inscriflions Hióroglyphiques. Seconde Série, I, Pl. CX, ligne i.Je comige maintenant la traduclion donnée, l.l., 1I, page 76, dans l'espoir qu'on ne me bamera pas d'une faute que j"ai ćé le premier à signaler.
| ne Rovif, Eidfou, ll. CXXXIV = he Rochemonten, Edfou, page 520. \(\ddagger\) me Rohemonteix, Edfou, page 472.
§ 1, Kocnemoxten, Edfou, page 575 . Pour le sths "foie" du groupe〒 \(?\), wir Lembbre dans sphinx, II, p. St.

\(\stackrel{\|}{\infty}\) hiératique, s'est montrée nulle, puisque le passage en question, au lieu du signe \(\bar{f}\), contient le signe \(\mathbb{f}\), ce qui nécessite un rapprochement du titre bien connu
 ces circonstances, nous pourons nettement affirmer que la lecture du groupe Ans à à présent, est absolument inconnue.

En essayant de dissiper l'obscurité qui règne sur ce point de notre science, il nous faut faire nos excuses pour le laconisme de cet article, laconisme qui est forcé, d'autres occupations nous empêchant de donner à nos remarques le développement que comporte sans doute la matière.

Tout le monde connait le titre qui surtout est fréquent à partir de la XVIII \({ }^{e}\) dynastie.* Dans l'ouvrage cité, M. Mever dit ceci: "Dagegen ist sie (= die Gruppe \({ }^{n}\) ) fast immer m necht 'die Macht, Stärke,' und peseş ( Bedeutung "Schutz, sich schiitzend ausbreiten, beschirmen" (daher öfter mit dem Flïgel determinirt) haben kann, verbunden. Das \(\checkmark n e b\) in der Gruppe kann daher nicht 'Herr' bedeuten, sondern muss, wenn es überhaupt einen Sinn hat, als 'gesammt, alle' gefasst werden." \(\dagger\) C'est justement la thèse combattue ici par M. Meter que je voudrais soutenir. \(\ddagger\)

C'est une rariante de l'ethnique app in lic: 0 o qui nous a fourni la lecture si longtemps vainement cherchée. Cette variante se voit à la ligne 4 de la stèle historique de Ptolémée, fils de Lagos, où nous rencontrons le groupe que voici

\footnotetext{
* Cfr. les exemples du titre en question, communiqués dans lourage, trés. intéressant, publié par Ed. Meyer, Set-Typhon. Eine veligionsegeschichtliche Studie. Leipzig, 1875.
\(\dagger\) Meyer, loc. cit., page 34.
\(\pm\) L’avis que, il y a 17 ans, j’ai énoncé à savoir que le titre
 se lirait pesesst, je le retracte maintenant comme inexact [Pıelid, Petites Etudes Egyftologiques, IS8 I, page 9].
§ Publiée par Brugsen dans la Zeitschrift, IS71, pages i-13, et par Mariette, Monumens dizers, I'l. I4.
}
sans doute se transcrit hum－nchu．＊Maintenant，comme il est connu， que le titre \(A^{M}\) a pour variante la forme \(A^{n}\) ，il est évident que cette dernière se lisant molui，\％le premier doit également se lire netui．
（ ees observations montrant que certains groupes，composés de \(\checkmark\) et un autre signe superposé，se lisent nck，on peut se demander si le titre ne doit pas se lire suivant le méme principe．Pour ma part，je le pense．Il est incontestable quil y a un grand nombre de groupes écrits à l＇aide du signe \(\square\) et un autre signe superposé， qui ne se lisent pas nel，mais alors cet autre sighe représente un diadème réel qui repose naturellement sur le fond d＇un panier， comme par exemple \(\underset{\square}{G}\) ，etc．Je crois donc que est à lire miti，c’est－i－dire quil est une variante de sens du groupe

© à cette occasion，méritent particulièrement d＇être sig－ nalées．L＇identification que nous venons de proposer est prouvée par des exemples comme ceux－ci ：－
 d＇un côté，et
 sur ta tête＂－de l＇autre．

En étudiant de près les textes des basses époques auxquelles ces exemples ont été empruntés，nous trouvons que＇he s＇y emploie de
＊Je lis hau－nehu，non pas hau－hthui，l＇exemple datant des basses époques out la différence entre le duel et le pluricl parait s＇ètre éffacée，en sorle que tous les duels formels alors équivalent it dés pluriels．Pour cette parricularité de la srammaire égyptienne，voir l＇senl．，Inscriptions Ahicherlyphiques．Seconde Série， 11，page 54，n． 6.

deux manières distinctes: tantôt le groupe est indépendant, tantôt il sert d'épithète à un nom de roi ou de divinité. Dans le premier cas, il faut le traduire simplement "les deux diademes," mais doit-on traduire de la même façon pour le second? Par exemple la déesse Hathor s'appelant ("la grande, maîtresse d'Anit,) maître des deux diadèmes," comme on le fait très souvent; quoique, à mon avis, "les deux diadèmes" pût sans doute aussi se défendre.
 le lire nebti et le traduire ou "les deux diadèmes" on "celui qui porte le diadème" suivant qu'on croit à la présence d'un duel, ou à celle d'un nom d'agent en \(\underset{\text { li }}{0}\) ayant une physionomie selon la règle découverte par nous en 1879 .* L'identification du roi de l'Egypte avec les deux couronnes \(\dagger\) qu'il porte, n'est guère plus hardie que son identification avec Horus et Set, les deux maîtres qui étaient, eux aussi, andeg par suite de leur rôle de seigneurs de l'Egypte.

\section*{Note Aduitionnelle.}

En revisant les épreuves de ce mémoire, il me revient à l'esprit que, lors de la composition du second volume (le commentaire) de ma Seconde Série, j'ai lu le groupe \(\square \square\) bet, lecture qui est peut-être la seule vraie. A l'occasion de cette lecture, j'ai évidemment pensé au groupe \(\int \longmapsto \longmapsto ~\) et varr., désignation fréguente du ciel. Consulter, à ce sujet, Brugsch, Wörtertuch, V, p. fit, et la forme \(\rightleftharpoons \sim\), passim.
* Zoitschrift, XVII, pages 145-148.
† En français, le mot "couronne" peut semployer dans le sens de "puissance royale ou impériale," selon Littré. Nous rencontrons ici une analogie de l'usage des égyptiens de désigner Pharaon par le titre "les deux courmanes."

\section*{MOTS ÉGYPTIENS DANS LA BIBLE.}

> Par J. Liembin.

\& © minn n'est qu'une forme du même mot arec un o intercalé.
(ien. xli, 2: Nָ les rosecux, en égyptien no Mo M akhakh, ce qui átrdoic.

3 no 48 P est une forme redoublée de
 pluriel

Gen. xli, 3 : שְׁבַּת הַיְאָר la lever ou le bord du . Tïl, en égyptien

Nous avons ici en hébreu et en égyptien deus mots dont le son et le sens sont identicues; et ce, qui est encore plus remarquable, non seulement le sens primaire: la liore, est identique, mais aussi le sens secondaire: le bord. Dans son Dictionmaire M. Brugsch dit: Tras, 皿远, gen. fem. Aeltere I) ualform (entstanden aus sep-ti) des sehr seltnen Singularis a © \(P\), mit der Bedeutung von Lippe, verwandt mit dem arab.-hebr., chotor.
lidentité des deux mots sont tous les deux du genre féminin, ils ont le même son et les mémes significations: liow et hord; si lidentité n'est pas fortuite, ce qui n’est pas bien raisemblable, elle témoigne une parenté dorigine entre les langues sémitípues et khamites.*
 Sprathitumb.

Gen. xli, 42 : טַבַעַת, anneau, en égyptien peut-être \({ }^{\text {D }}\) D -1 t'ba, doist et J - م C O t'ba, sceru, cachet.
flenont'ba, ressemble plus à
 proches parents.*
 étoffe fine et précieuse.

Le mot hébreu est un emprunt de l'égyptien.
 \(\int\) ir \(14 \underset{\rightarrow \rightarrow}{\infty}\) markubuta, char, zoiture.

Ici le mot égyptien est emprunté d'une langue sémitique. Aussi le char comme le cheval sont-ils importés, probablement par les Hyksos, de PAsie en Egypte.

Gen. xli, +3: אֲבְ en égyptien of \(] \rightarrow 0\) abrek, ìs sauche. toi! alles à gauche!
\(Q] \rightarrow a b\), la grauche: \(\underbrace{}_{r} r k\), paur toi, ou l'impératif \(4 \underset{\infty}{\infty}\) toi: vaa à gauche, toi! Le précurseur devant la voiture de Joseph devait ouvrir le chemin dans la foule des rues en criant : à gauche ! La Septante semble avoir compris l'endroit dans ce sens; car elle

 anjourd'hui dans les rues du Caire les précurseurs qui courent devant les voitures des grands personnages crient en arabe: Shimalak, to thy left, ou Yemechak, to thy right, pour faire passer la voiture dans la foule. \(\dagger\) Cette explication s'accorde très-bien, il me semble, avec le contexte: après que Pharaon avait donné son second char à Joseph, il lui conceda la prérogative des grands-seigneurs d'avoir des précurseurs devant son char.

Le Page Renouf, notre regretté présidert, a expliqué le mot Abrek autrement.t. Il y voit une phrase contenant trois mots:
* Cfr. Brugsch, Dictionnaire hićr., p. 1678, ou nous lisons:

\(\dagger\) Lane, Manners and Customs of the Modern Esyptians, I, 209.
\(\ddagger\) Proceedings of the Society of Biblical Archaology, Vol. XI, 5-8.
1. 4 A \(a b\), "thirst, want, desire, longing, love."
2. P (strictly "mouth ") "word, command."
3. \(\circlearrowright\) pronom possessif: ton ;
et il traduit le tout \(4 \int\) par: "thy commandment is the object of our desire."

Mais c'est une explication que je ne peux pas adopter; je la trouve un peu artificietle.

Je ne peux pas non plus épouser l'opinion de M. Harkavy qui dans Abrek voit les mots égyptiens 强 ou ) des savants," ou, pow conserver le \(b\), 皿 saint savant." * Le sens convient assez bien, mais le son ne concorde pas.

Il est inutile de répéter toutes les opinions et explications que Yon a emises sur le mot Abrek. Celle que j'ai domnée plus haut: "allez à gauche!" est la seule probable.

 \(\square \sqsupset t^{\prime} f a\), magrasin, srenier.
\(x^{2}\) nip \(^{2} t^{\prime}\) fn, yui donne la nourriture: Erseluger, auch: das Erseurte, Kïdd. \(\dagger\)

indique l'adjectif \(\ddagger\) ou la persomne d’agent.§s Brugsch cite notre mot, mais dans le sens de "Statue eines Vorfahren, oder des Erreugers." || Cependant le sens propre doit étre: "la personne
* Journal Asiatiyue, liancée 1870.
\& Brugsch, Dict. hitrogl., Suppl., p. 1384.

SBrugsch, Hierorlyphische Grammatik, p. 5, 6: 1)ie Silbe 11 , welche einer Reihe won Wörtern angehangt wird und ihnen dann den Sinn giebt: "Bewohner eines Ortes oder einer stadt, ein Ifandwerk ühend," und allgemein: "seiend in cinem /astande, den das vorhergehende Verb anzeigt."

qui a, possède, donne la nourriture"; combiné avec le mot qu qui sans aucun doute constitue la dernière partie de
 "la personne qui possède ou donne la nourriture de la vie," ce qui
 honorifique attribué à Joseph par Pharaon.

D'ailleurs le mot \({ }^{2}\) n \(\Longleftrightarrow t^{\prime} f(x\), se trouve dans plusieurs noms propres composés :

Trois rois au moins de la XIV \({ }^{\text {e }}\) dynastie portent des noms composés avec le mot

Aussi M. Harkavy a vu ici le mot \({ }^{2}\), il identifie les mots hébreux avec
"nourriture, sauveur de la vie."
Quant au premier et au dernier mot il a touché juste, mais ¢ U 0 n'a rien ici à faire, et par conséquent sa traduction tombe à cet égard.

Plusieurs identifications plus ou moins invraisemblables sont ici à noter.

Brugsch transcrit Zofnat-Pancakh par l'égyptien
\[
Z a-p-\check{c}-n t-p-a-a n c h,
\]
* L'i de \(\ 1\) est tombé dans la prononciation.
+ Lieblein, Dictionnaire de noms, No. 451.
\({ }^{+}\)Lieblein, ibid., No. 55.
§ Lieblein, ibid., No. 14.
|f F.. Prugsch et U. Bouriant, le liate des rois, Nos. 224, 226 et 229.
"Landpfleger des Bezirkes von der Stätte des Lebens," c'est-àdire: "Landpfleger des sethroitischen Gaues."*

Mais cette identification me semble peu probable; sans parler des difficultés phonétiques, le titre de gouverneur d'un seul nome ne pourrait pas convenablement être donné à Joseph.
M. Krall a proposé cette identification :

\section*{}

Les noms composés de ces trois parties: 1, d'un dieu, \(3, Y_{x}^{\text {e }}(\) ou \(\left.\cap)\right\}_{0}^{m m}\) sont très frequents depuis la fin de la \(X^{+e}\) dynastic jusqu'aux demiers temps de l'émpire égyptien; on n'a qu"à feuilleter mon Dictionnaire de noms pour s'en convaincre. Mais dans les temps de Joseph, qui probablement vivait sous les Hyksos, ils n'étaient nullement en usage. C'est donc, déjà à cause de celà, à présımer que Joseph n'ait pas pu porter ce nom. Je reviendrai à cette question ci-après; pour le moment je ferai observer que l'explication de M. Krall ne tient pas contre la moindre critique ; car les rapprochements phonétiques sont inadmissibles, et \(\xlongequal{q}\) \& hors de propos, comme il n'explique rien quant-à la situation spéciale de Joseph.
M. le professeur Steindorff a retouché le travail de M. Krall et corrigeant \(\underset{\text { man }}{\text { an }}\) ) en de
\[
\begin{aligned}
& \text { Zofnat Paneakl: }
\end{aligned}
\]
mais en cela il n'a pas été bien heureux, il me semble, et son expliration neest pas plus acceptable que celle de M. Kirall: elle est au

\footnotetext{
* Brugsch, Geschidhte Acgyptins, p. 24S, note.
+ Iorhandlunsen der lyll Intern. Oriont. Congr. Aesphonfrik. Section, 1. 110.
\(\ddagger\) Yeithinift fïr is. Spr. und .Hterth., ISS9, p. 41.
}
cĭfankh, était au moins un nom actuellement en usage depuis la fin de la \(\mathrm{XX}^{\mathrm{e}}\) dynastie, tandisque le nom \({ }^{2}\) ? ne se trouve nulle part: c'est-ì-dire ces noms composés comportent, il semble, le nom spécial dun dieu, mais pas la notion pure de dieu. D'ailleurs il n'est pas possible de voir dans
 eüfankh, si l'on ne veut pas nier toutes les règles phonétiques et ouvrir la porte à tous les phantasmes.

Il est d'autant plus nécessaire de protester contre l'explication de M. Steindorff qu'on lui a donné une trop grande portée. Nous avons vu plus haut que les noms propres composès de cette manière n'ont commencé d'être en usage qu'avec la fin de la \(\mathrm{XX}^{\mathrm{e}}\) dynastie, c'est-à-dire environ 900 a. J.-C. Mais si Joseph a reçu un nom qui n'était pas connu arant l'an 900 a. J.-C., il s'ensuivrait arec nécessité que le texte biblique qui nous raconte cette histoire n'ait pas pu être écrit avant l'époque d'environ l'an 900 a. J.-C. C'est aussi, de fait, le résultat que \(M\). Steindorff a tiré de son explication et qui a été corroboré par lautorité de Paul de Lagarde. Ce savant distinqué dit, après avoir relaté et adopté l'interprétation, proposée par M. Steindorff: "So haben wir in ihnen (diesen Namen) ein überaus wichtiges Hülfsmittel zur Datirung von Genesis xli, 45, wie des ersten Elohisten überhaupt."* Et M. Steindorff dit : "Eigennamen der besprochenen Form vermag ich zuerst im Anfange der XXII Dynastie nachzuweisen, häufig werden sie erst in saïtischer Zeit. Dı auch die Namen \(N_{s-n t}\) und Petepre derselben Epoche angehören, \(\dagger\) so haben wir in ihnen ein überaus wichtiges Hülfsmittel zur Datirung von Genesis sli, 45 , wie des Elohisten überhaupt." \({ }^{\dagger}\)

Ah, quelle science! D'une interprétation aussi douteuse ou plutôt, comme je le crois, fautive, puisquil y en a une plus probable-tirer d'une telle interprétation une conclusion si importante, c'est compromettre la science et plus particulièrement l'école de Wellhausen qui a mieux mérité de ses adhérents.

J'insiste donc jusqu'à nouvel ordre sur l'interprétation donnéc

\footnotetext{
* Göttinger Gelehrte Nachrichten, 1889, p. 320.
\(\dagger\) Il y a probablement ici une erreur ; nous verrons plus tard que les noms Asnat et Potiphar se laissent expliquer autrement et que l'on n'en peut rien conclure quant au temps.
\(\ddagger\) Zeitschrift für äsypt. Spracha und Atterthumskunde, B. XXVII, p. 42.
}
plus haut: \({ }^{2}\) mon qui possède ou donne la nourriture de la vie," est par le son et par le sens un équivalent exacte et probable de lhébreu el la forme avec larticle masculin de ville Ra'amses,* le temps de la rédaction du texte de l'Elohiste; et, d’après les recherches que j’ai faites ailleurs, ce temps tombe sous le règne de Ramsès II, c'est-à-dire, selon moi, au douzième sï̀cle a. J.-C.
 femme, qui se trouse partout sur les monuments de la bonne époque, depuis la \(\mathrm{XI}^{e}\) jusqu'àa la \(\mathrm{XVHI}^{e}\) dynastie inclusivement. \(\dagger\) Arec \& prosthétique quiétait facultatif Snat a pu prendre la forme Asnat.
 qui à laide de 1 ' \(A\) prosthétique aurait pu prendre la forme \(A\) sneit. Mais cette identification n'est pas bien probable ; du moins, il n'est pas permis d'en tirer aucune conclusion quant au temps de la
 est beaucoup plus vraisemblable.

Gen. xli, 45 : Potifera et Potifarss sont généralement regardés
 ainsi comme appartenant au groupe des noms composés de \(\qquad\) Cependart je :eux faire observer que Potifor pourrait très bien
 sous les Hyksos et qui était chef des constructions du dieu Ammon.|| Si dans \(\stackrel{\square}{\square} \int \frac{e^{\circ}}{\infty}\) pt-lur, dont la dernière partic probable-

}
 Simendes.

S (ien. xxxix, \(\mathbf{I}\).
Liellein, Mitaonnaire de noms hiorosthphiques, No. 553.
ment nous donne le nom du dieu Baal, la première partie \(\Rightarrow t\), joue le même rôle que \(\square_{0} p d\), et que par conséquent les noms composés de \({ }_{\Omega}^{\square}\) remontent aux temps de Hyksos, je ne sais pas. Il y a des doutes ici que pour le moment je ne peux pas lever entièrement. Mais en tout cas il est bien certain que les noms
 ne peuvent être employés comme argument chronologique quant ì la rédaction du texte biblique.

Gen., xli, 49: "Comme le sable de la mer, en quantité extra-
 sont plus nombreux que le sable de la rivière."

Gen. xlii, \(\mathrm{I}_{5}\) : "Par la vie de Pharaon!" en égyptien \(T_{0}^{\text {mam }}\) \(\overbrace{0} f_{0}\) f, "la vie du seigneur royal." An oath by the king's life, dit Goodwin. \(\dagger\)
 toute l'Egypte"), en égyptien \(\not \subset\), "chef, directeur."
M. Seippel, notre sémitologue, m'a dit que אָדרוֹ se trouve en hébreu et en phénicien, mais pas dans les autres langues sémitiques, et que sa dérivation sémitique n'est pas certaine ; il pourrait donc très bien être un mot égyptien. Je retrouve avec Brugsch ce mot dans 4 ym adn, qui a le méme son et signifie "chef, directeur," titre qui a été porté par les plus hauts fonctionnaires, p. ex. Horemhib qui avant de monter sur le trône était qualifié \(4 \underset{\text { man }}{\leftrightarrows}\), "Adon de tout le pays." \(\ddagger\)

Gen. xlv, 8: \(\underset{\boldsymbol{Z}}{\mathbf{Z}, ~ " ~ p e ̀ r e ~(a u p r e ̀ s ~ d e ~ P h a r a o n) . " ~}\)
Peut être nous n'avons pas ici le mot hébreu \(\underset{\substack{\text { N }}}{ }\) père, mais le mot égyptien \& \(\int=0\) ab, instecteur, de sorte que notre texte biblique ne qualifie pas Joseph le pìre, mais l'inspecteur, l'homme d'affaires de Pharaon.§

\footnotetext{
* Os. von Lemm, Aesyptische Lesestütke, p. 75, 21.
† Zeitschrift für äs. Sprache, 1874, p. 62; cfr. Chabas, Mélanses, III, I, p. So.
\(\ddagger\) Brugsch, Geschichte Aegyptens, p. 252.
§ Brugsch, Dictionnaire, Suppl., p. 38.
}

Probablement il faut lire (Genesis xlvii, \(3^{1}\) ) ainsi: "Et il dit: Jure-le moi! Et il le lui jura. Et Israël s'inelina sur la tite du buiton." Et, de fait, la Septante
 on jurait en "se plaçant sur la tête du bâton," Déjà Chabas, il y a long temps, a fait le parallèle de ce groupe hiéroglyphique et de notre expression biblique. \(\dagger\) L'opinion de Chabas ne doit pas tomber dans l'oubli.

Gen. 1, 3 : "Et les Égyptiens en firent le deuil soixante et dix jours."

En Egypte il y avait toujours un intervalle de 70 jours entre la mort et l'enterrement.
(ien. 1, 22 et 26 : Joseph mourut, âgé de cent dix ans."
Dans les textes égyptiens ou trouse souvent le souhait de virre
 dix ans sur la terre." \(\ddagger\) C'était, d'après l'opinion des Egyptiens, l'ìge le plus avancé à qui il était possible d'atteindre.

TWENTY-EIGHTH SESSION, 1898.

\author{
Fifth Mleeting, 7 the June, i 89 S. \\ Prof. A. H. SAyCE, LL.D., etc., President, in the chalk. ———\#i.B———
}

The following Presents were announced, and thanks ordered to be returned to the Donors :-

From the Author, Rev. A. S. Geden, M.A.:-Books for Bible Students. Edited by the Rev. Arthur E. Gregory. Studies in Comparative Religion. London. Svo. 1898.

From the Author, George St. Clair, Esq. :--Creation Records discovered in Egypt. [Studies in the Book of the Dead.] London. Svo. I 8 g 8.
From the Publishers, Messrs. Kegan Paul, Trench, Trübner, and Co.:-The Holy Land in Geography and in History. Vol. I. Geography. (With numerous maps and plates.) New York. Svo. 1897.
[No. cly.]

From the Author, P. A. Cesare de Cara, S.J. :- Cli Hetheipelasgi in Italia, Gl' Itali della Storia. Sommario.

Ditto, ditto, ditto. Enotri-Itali. Civilta Cattolica. \(1 S_{9} S\). Svo.
From the Author, Sir Henry H. Howorth :-The Early History of Balylonia. II. 'The Rulers of Shirpurla or Lagash. Eng. Mist. Reaica', April, iSgS. Svo.

From the Author, Dr. I. Hall Gladstone:-The Metals used by the Great Nations of Antiquity (Lecture, Roy. Inst.). Nature, April 21, 1 So \(_{9}\).

The following were elected Members of the Society, having been nominated at the last Meeting, held on the 3rd May, i S98:-

The Right Rev. the Lord Bishop of Ely, The Palace, Ely.
Wynne E. Baxter, LL.D., J.P., 170 , Church Street, Stoke Newington.

Rev. George H. Box, M.A., Hebrew Master, Merchant Taylors' School.

James Chisholm, 16, Knowe Terrace, Pollokshields, Glasgow.
Charles Marston, Highfields, Wolverhampton.
Robert Sewell, M.R.A.S., etc., 6, Palace Mansions, Buckingham Gate, S.W.

A Paper by Sir II. II. Howorth, K.C.I.E., LL.D., F.R.S., ctc., "On the Earliest luscriptions from Chaldea," was read by the President.

Kemarks were added by the Rer. C. J. Ball, Mr. Theo. J. Pinches, Prof. Ira M. Price, Mr. John Tuckwell, and the I'resident.

Thanks were retumed for this cemmunication.

\title{
HERODIAN POT'TERY AND THE SILOAM INSCRIPTION.
}

\author{
By E. J. Pilcher.
}

On the 6th April, \(\mathbf{1 8 9 7}\), the writer had the honour of reading a paper before this Society upon "The Date of the Siloam Inscription," in which it was pointed out that the epigraphy of this monument did not correspond with the lettering of the dated inscriptions of the 7 th and 8 th centuries e.c., but that many of the characters exhibited forms of demonstrably late date, approaching most closely to those employed upon Jewish coins at the commencement of the Christain era. It was therefore suggested that the Siloam Inscription was sery probably a memorial of the time of Herod the Great.

This view has met with some criticism, but no serious attempt has been made to meet the palæographic points which were raised. It was shown that the Siloam Aleptr and Mem did not appear upon Phoenician coins untıl a comparatively late date: and that other letters, such as the Zain and Sade, presented forms whose gradual differentiation from the original types could be traced by means of the inscriptions upon Jewish engraved gems, and must therefore belong to a very late period of the history of the Old Hebrew Alphabet.
Sade \(\ldots\)

Of course these observations could not be claimed as new, seeing that Prof. Socin in 188ı pointed out the identity of the Siloam Sade with the same letter upon the Jewish silver shekels, and that Canon Isaac Taylor had remarked upon the likeness of the Zain of Bar-Cochal) to that of the Siloam alphabet.

It has been objected that the Siloam Vau and Shin presented forms of some antiquity; but these are precisely the letters which remained ummodified down to the latest known stage of the Old Hebrew alphalet ; and it is hardly necessary to remark that an inscription must be dated by the most modern of the letters found upon it.

The two chief objections advanced against the Herodian date of the Siloam Inscription were, that we should not expect the Hebrew language to be employed at so late a period; and that the square character was believed to have entirely supplanted the Old Hebrew alphabet at that time.

With regard to language, it is sufficient to point out that the earliest known Jewish inscriptions in the square character are in the Hebrew tongue, although the matter of them is not of a specifically religious nature. One critic expressed the opinion that an official record of king Herod ought to have been in Greek, like the well known Temple Stela discovered by Prof. Clermont-Ganneau, and now at Constantinople ; but the writer expressly pointed out that the upper part of the tablet at Siloam had been left blank, as though it were intended to bear a bi-lingual inscription; and of course the other language would most probably have been Greek ; but as it was never cut we cannot be certain.*

As regards the Old Hebrew character, it was previously shown that this was employed upon Jewish coins as late as i 35 A.D., and that a lapidary inscription found at Amwas dated very probably from the fourth century of the Christian era; so that there was rally nothing extraordinary in an Old Hebrew inscription being of the time of King Herod the Cireat. The question of the late use of the Old Hebrew al!habet, however, may now be considered to have been settled by Mr. F. C. lurkitt's discovery of a palimpsest of Arquila, in which the tetragranmaton is written in this alphabet.
* Prof. Ganneau has suggested that the bank space aloove Hebrew was
 had leen already dressed and smosthed down, it certainly seems more likely that the intention was to incise an inseription.

Origen, in his commentary on the Psalms, informs us that the best copies of the Old Testament in his time contained the Divine Name written in Hebrew characters-not the letters which were in ordinary use, but the ancient ones. This statement has been contested, and doubts thrown upon the ability of the Christian Father to distinguish the ancient characters ; and it is therefore extremely gratifying to find that the learning and correct observation of Origen have been so strikingly vindicated.

Among the mass of old manuscripts rescued by Dr. Schechter from the Genizah of the ancient Jewish synagogue at Cairo, Mr. Burkitt recognised a leaf which had originally been inscribed in Greek uncials of the 5th or 6th century A.D., but which had had a Jewish liturgical work of the 1 th century written above it in square Hebrew. Dr. Schechter eventually discovered another leaf of the same work, and the two leaves have been published, and exhaustively discussed by Mr. Burkitt.* That these two leaves belonged to the well-known version of the Bible executed by Aquila in the and century, there can be no doubt; for the fragments agree in every particular with the accounts of that version which have been transmitted to us. It will be remembered that Aquila was a Greek of Sinope, in Pontus, said to be related to the Emperor Hadrian. He was converted to Judaism, and became a pupil of the celebrated Rabbi Aqiba. Being dissatisfied with the existing Greek translations of the Old Testament, he undertook a fresh yersion characterised by its slavish adherence to the Hebrew text, every word and particle being reproduced as literally as possible. The date of this version has been variously estimated as A.D. 90, A.D. 96, A.D. 128, and A.D. 130 ; but the balance of probability appears to be in favour of the year 128 A.D. In the year 132 A.D. the rebellion of Bar-Cochab broke out, and we find that this Jewish leader struck a large number of silver and bronze coins bearing inscriptions in the Hebrew language and the Old Hebrew character. It has been asserted that Bar-Cochab "revived" the Old Hebrew alphabet upon his coins from antiquarian considerations. It is therefore of considerable palæographic importance to find that a manuscript of Aquila's translation has the Divine Name יהוה written in Old Hebrew letters; for this fact would go far to prove that the MSS. from which

\footnotetext{
* "Fragments of the Books of Kings, according to the translation of Aquila," by F. Crawford Burkitt, M.A. (Cambridge University Press, 1897).
}

Aquila's translation was made were in the Old Hebrew character also, and that Bar-Cochab merely employed upon his coins the alphabet which was then in common use for literary purposes.

As Mr. F. C. Burkitt says :-
"'The use of the Old Hebrew character in the MiSS. of Aquila's version has an important bearing on the history of writing among the Jews. Although the four letters must have been a mere ideogram to the copyist of our MS., there is not the same reason for thinking this to have been the case with Aquila himself, three centuries and a half earlier. Aquila's master is said to have been the famous Rabbi Akiba, who perished in the revolt of Bar-Cochba; and Bar-Cochba during his brief tenure of power issued coins with inscriptions in the Old Hebrezi charucter. We must not hastily assume that it had died out altogether in Aquila's day; the present discovery tends rather to bring down the date to which the Old Hebrew alphabet continued to be used. In so doing it helps to strengthen the arguments which have been lately brought forward by Mr. Pilcher for regarding the Siloam Inscription as a work of the age of Herod." *
"These notes on the portions of text covered by the fragments of the Aquila MS. have only an indirect comexion with it. It may therefore be convenient to sum up the principal points upon which our knowledge has been directly extended by its discovery.
"In the first place it confirms the remarks of the Fathers about the use of Aquila's translation by the Jews. The MS. now at Cambridge has come from a synagogue. It was in Jewish hands in the ifth century A.D., when it was made a palimpsest, and there is no reason why we should not assume that it had remained in Jewish hands since the day it was transcribed. It also confirms the express statement of Origen and S . Jerome, as to the use of the Old Hebrew alphabet for the Tetragrammaton. The employment of this alphabet for Jewish coins within the Christian cra is thus seen to be no disconnected archaism, but the use of a living national script." \(\dagger\)

Whatever the history of the Aramaic square alphabet may have been, therefore, and whatever the date of its adoption by the Jews, it is now undeniable that the ancient national Jewish alphabet remained in use for the purpose of writing llebrew for a considerable period after the beginning of the Christian era. There is no

\footnotetext{
* Itid., p. 16.
+ Ibid., p. 3 .
}
evidence that the Samaritans ever used the square alphabet: they always remained loyal to the more ancient character. And the cities of the Phonician coast also employed their closely related form of writing to a comparatively late period.*

The object of the present paper is to direct attention to the stamps found upon some large jar handles discovered by Sir Charles Warren in January, 1869 , close against the platform of Herod's Temple at Jerusalem, at the south-eastern corner of the Haram enclosure, at a depth of sixty-three feet from the present surface. Sir Charles Warren says:-
"The pottery lies about two inches thick, but it is all in fragments: however, some of the handles were found to have stamps on them, and I employed a man for some days poking into the layer for several feet on either side, and eventually got together eight of these handles ; drawings were made of them and sent home at once. I supposed the jars to have been broken only a very short time after the building of the wall." \(\dagger\)

Underneath this layer of pottery were found several broken lamps of the Græco-Phœenician period, pronounced by Sir Augustus W. Franks to be not earlier than the second century before the Christian era. \(\ddagger\)

These stamped vase handles, therefore, were found to overlay relics of pottery which were certainly not older than 200 b.c. Their discoverer recognised that they were deposited shortly after the building of the platform wall, that is to say about 17 e.c. Consequently the vase handles can only be assigned to the reign of the monarch who built the present platform wall, namely King Herod

\footnotetext{
* It is very frequently asserted that Matthew v, 18 proves the use of the square Hebrew in the ist century A.D. The words used, however, are \(i \tilde{\omega} \tau \alpha\) and кєpaia. 'I \(\grave{\tau} \alpha\) a was proverbially the smallest letter in the Greek alphabet. If the Evangelist had intended to refer to the Semitic letter, he would undoubtedly have called it \(\mathbf{I} \omega \hat{\delta}\), as is done in the Greek version of the Lamentations of Jeremiah. In the oldest examples of the Jewish square character, such as the Beni Hezir Inscription at Jerusalem, the Yoll is not lesser than the \(I^{\text {Faut }}\); and the Zain is really the smallest letter in the alphabet. In the English version кєpaia is trans. lated by "tittle" ; but the tittles upon the squane Hebrew characters (such as are not carlier than the ifth century A.D. See Canon Taylor, "The Alphabet," Vol. I, p. 276.
+ "The Recovery of Jerusalem." Edited by Walter Morrison, M.P. (London, 1871), p. 152.
\(\ddagger\) lbid., p. 475.
}
the Great. Some ingenious attempts have been made to get away from this conclusion. It has been suggested that the mass of pottery of which the vase handles formed part had been discovered in some ancient excavation, and then been thrown down at the foot of the platform wall. In this case, however, we should have expected the pottery to have been mixed with stones and earth from the hypothetical excaration ; but this does not appear to have been the case. Another suggestion has been made that the kings of Jerusalem were collectors of ancient pottery, and that their museum had been dispersed by some iconoclastic successor, and the fragments thrown down in this place. The improbability of both these theories need hardly be insisted upon; and we are therefore brought back to the conclusion that these vase handles, and the rest of their associated pottery, really dated from the time of King Herod, and were thrown away as useless into the rubbish heap, where they remained until disinterred by Sir Charles Warren.

Six of the Ophel vase handles bore a very peculiar device, but, unfortunately, in no case is there a perfect impression. The stamps which were used appear to have been about \(11 / 4\) inch long by \(?_{3}\) inch wide. In the centre is a winged object, above which can be traced the letters לh in the Old Hebrew character, while underneäth are other letters which vary in each specimen. These stamps have been hastily and carelessly impressed upon the wet clay, and in two cases the impressions are quite illegible.

The winged object in the centre of the stamp appears to be a debased example of the well known winged figure which occurs upon Assyrian sculptures hovering over the king, and which is usually identified with the god Assur. This winged figure was imitated upon the Persian sculptures and engraved gems, and at a still later period it appears upon Phoenician, and even Jewish seals such as that shown in Taf. III, fig. 12, of Dr. M. A. Levy's "Siegel und Gemmen." The device upon the Ophel jar handles, however shows no trace of a human form. But this is not an isolated case, for there are other instances in which the human figure is wanting, and the gradual degradation of the Assyrian deity to a mere winged device may be traced by means of the engraved gems.

Mr. George Armstrong, the Secretary of the Palestine Exploration Fund, with his never failing courtesy, has kindly furnished the author

\section*{PlATE I.}

Fル. 3. (No. 67.)

Fin: 5. (No. 69.)

Fic: \(6 . \quad\) (NO, 70.)
with casts of the Ophel handles, and drawings are accordingly reproduced in

\section*{PLATE I.-.STAMPS UPON HANDLES OF HERODIAN POTTERY.}

Fig. i is intended to illustrate the device upon the Ophel stamps. It shows a seal from the Louvre collection, bearing the inscription לספראל (Levy's "Siegel und Gemmen," Taf. I, fig. 3). It will be seen that in this gem the human figure of the Ferouther has disappeared, and left merely the disk, with the wings and tail of a bird. It may be conjectured that the well known Egyptian device of the winged globe may have had some influence in the evolution of this design.

Fig. 2 is the writer's restoration of the stamp upon the Herodian vase handles.

Figs. 3 to 6 show the four best specimens of the potter's stamps. These may be compared with the originals at the offices of the Palestine Exploration Fund, as they scarcely do justice to the delicate and artistic forms of the letters, which are quite equal to those upon the Siloam Inscription.

The lettering upon the stamps is as follows :-
Fig. 3, (No. 67.)

\section*{למל]ך]}

There does not appear to have been any letters at all at the bottom of this stamp, and thus the whole inscription upon it would be la-melek \(=\) " of the king."

Fig. 4, (No. 68.) The letters upon the right side have not been impressed.

This inscription was read by Dr. Samuel Birch as "King Shat " ; * by Prof. Clermont-Ganneau as "to Molokshet" ; \(\dagger\) by Prof. Sayce as the compound name of a deity "Melech-Sheth." \(\ddagger\) All these readings, however, ignore the probability that there were two other

\footnotetext{
* "The Recovery of Jerusalem," p. 474.
\(\dagger\) "Sceaux et Cachets," par Ch. Clermont-Ganneau (Paris, I883), p. I".
\(\ddagger\) "The Phœnician Inscriptions on the Vase Handles found at Jerusalem," by the Rev. Prof. Sayce. Quart. Stat. P.E.F., IS93, p. 240.
}
letters upon the right hand part of the stamp, these letters having failed to appear owing to the imperfection of the impression. Hebrew proper names ending in \(\boldsymbol{\sim}\) are rare, but we may instance the place-names דבישת, Josh. xix, in ; דרשׁת, Judges iv, 2 ; and

Fig. 5, (.V.69) Here, again, the right hand of the stamp is imperfect.

Prof. Sayce takes the imperfect marks in the lower right hand corner to be the remains of a Shim, and reads the inscription as " of Melech-Shochoh," which he explains as relating to a deity \(=\) Moloch of Sochoh, a town named in Josh. xv, 35. Prof. Ganneau believes he can trace a Gimel in this place. To the author, however, there appears to be traces of two letters which seem to be U, thus making the whole legend at the bottom of the stamp The personal names , בתבה , I Chron. xii, 3 ; and the place names, 6 r, and \(\boldsymbol{a}\), Deut. iii, 10 , may be instanced for the termination ה•

Fig. 6, (Vo. 70,) offers the most perfect impression:

This has been read by Dr. Birch as meaning " of king Zepha"; by Prof. Clermont (ranneau "to Molokziph"; and by Prof. Sayce as "of Melech-Ziph" (or " of the Moloch of Ziph," a town mentioned in Josh. xy, 24). It should, however, be noted that in I Chron. iv, 16 , זק appears as the proper name of a man. It might, therefore, be suggested that the lettering above and below the winged object should be read separately ; la-melek showing that it was royal pottery, and \(\angle i p / 2\) being the name of the potter.

We thus have four inscriptions:-

PLATE II．
TABLE OF ALPHABETS．
\begin{tabular}{|c|c|c|c|c|}
\hline Baal & Coins & Herodian & Siloam & Silver \\
\hline Lebanon & of & & Inscription & Shekels \\
\hline Bow1 & Antigonus & 17 R．c． & 4 B．C． & A．D．66－70． \\
\hline \(1000 \mathrm{B.C}\). & 40－37 1．c． & & & \\
\hline
\end{tabular}
\begin{tabular}{|c|c|c|c|c|}
\hline \[
\begin{aligned}
& \Varangle \\
& 8
\end{aligned}
\] & \[
\begin{aligned}
& F \\
& 4 \\
& 1
\end{aligned}
\] & & \[
\begin{aligned}
& F \\
& \frac{a}{7}
\end{aligned}
\] & \[
\begin{array}{ll}
7 & \aleph \\
j & \beth \\
7 & j
\end{array}
\] \\
\hline 4 & \(\triangle\) & & A & 4 \\
\hline & ヨ & ₹ & \(\cdots\) & 习 7 \\
\hline & － & & Y & 7 \\
\hline \(\ddagger\) & － & \(=\) & I & － 1 \\
\hline 月 & 曰 & & 回 & 白 \\
\hline \(\oplus\) & － & ． & － & － \\
\hline も & \(\lambda\) & \(\ddot{\sim}\) & \(z^{2}\) & 7 \\
\hline \(\stackrel{1}{ }\) & y & \({ }^{*}\) & J & － \\
\hline l & \(L\) & \(\checkmark\) & 6 & \(L\) \\
\hline m & y & ＂ & 尔 & ］is \\
\hline 4 & b & & \(\checkmark\) & ， \\
\hline 丰 & － & & － & 0 \\
\hline － & － & & \(\bigcirc\) & y \\
\hline & － & \(\jmath\) & \(J\) & 5 \\
\hline ＋ & － & & & い \\
\hline 中 & － & & P & P \\
\hline 1 & 9 & & 4 & \\
\hline ＇ & \(x\) & \(\times\) & \(\cdots\) & W W \\
\hline
\end{tabular}

Owing to the incomplete nature of these inscriptions, any interpretation of them must be regarded with great reserve. Prof. Ganneau makes the very probable suggestion that they were merely the names of the potters. Dr. Birch thought they referred to a hypothetical king Zepha and a king Shat, who are totally unknown to history. Prof. Sayce suggested that they were dedications to local deities.

However, the point to which the writer desires to draw attention is the fact that the Old Hebrew letters upon these jar handles are exactly the same in style as those upon the Siloam Inscription. This is especially noticeable in the letter Kaph. The extremely elegant Siloam letters have their chief strokes in the form of a double curve ; and this characteristic is reproduced upon the Ophel pottery.

\section*{PLATE II.-TABLE OF ALPHABETS.}

Col. i. It has been objected that the table of alphabets in the Proc. Soc. Bibl. Arch., Vol. NIX, p. 172, did not include the alphabet found upon the Baal Lebanon bronzes. It is therefore given here for comparison. It will be evident that the Baal Lebanon aiphabet (the oldest known form of the Semitic script) differs widely from the Siloam letters, and that these latter must consequently be vastly later in date.

Col. 2. Shows the letters used upon the coins of king Antigonus, 40 to 37 B.C.

Col. 3. Exhibits the eight characters found upon the Herodian vase handles, for comparison with the Siloam forms.
\(H e\) is not precisely like the Siloam letter, but is evidently closely allied in style.

Zain upon handle No. 70 is unfortunately imperfect, so that we cannot decide if the right hand side of the letter terminated in the two hooks which are so characteristic of the Siloam form.

Kaph is exactly the same as the Siloam \(\beth\) in every particular.
Lamed also has the exact Siloam form.
Mem differs from the Siloam letter only in having the strokes in its head unconnected by a bar. This peculiarity first appears in the \(\square\) upon the Phoenician coins of Alexander the Great, and this alone would demonstrate that the Ophel potter's stamps were late in date ; even if the same conclusion were not forced upon us by the device of the degraded winged objects.
\(P_{i}\) is almost the same as at Siloam.
Shin is exactly the same as at Siloam; but this is the usual shape of the Old Hebrew letter.

Tiun. The same remarks apply as to Shin.
Our knowledge of the Old Hebrew alphabet is chiefly derived from coins and engraved gems, where, owing to limitations of space, the artists could not bring out the beauties of the script. On the Ophel stamps, however, the letters are sufficiently large to display all the graces of form ; and as the characters of the Siloam Inscription are about \(\frac{3}{4} \mathrm{in}\). high, they also gave proper scope to the engraver. The lettering of the Ophel pottery is so exactly identical with the characters of the Siloam Inscription, that it must'be evident that they both belong to one and the same period: a period of culture and magnificence, when great attention was paid to calligraphy, just as at Palmyra in the time of Zenobia. We have seen that the Ophel jar handles were discovered upon a layer of earth containing pottery of a very late period; and that they were certainly deposited where they were found after the building of Herod's temple wall. It is therefore impossible to resist the conclusion that these handles date from the Herodian period; and the lettering upon them is a strong confirmation of the view that the Siloam Inscription must be assigned to the reign of king Herod the Great.

The Society is indebted to the kindness of the Palestine Exploration Fund for the use of the blocks of alphabets (p. 213) and the two jar handles (Plate III).

Proc. Soc. Bebl. Arh., Jinc, ISoS.

\section*{LA DÉESSE \(\rightarrow\) O具.}

Par Karl Piehl.
A propos de l'expression \(\rightarrow 0\) O 1891, "la princesse Maat," dans la Seconde Série de mes Inscriptions Hiéroglyphiques,* les auteurs de la Critique d'un critique, \(\dagger\) ont daigné décréter: "M. Piehl a confondu simplement deux mots très différents, ropï̈t 'princesse' et ropït 'statue, image.' Pour un lexicographe avisé, c'est jouer de malheur."

La thèse qu'on vient de lire est quelque peu hardie, comme je n'ai ici rien confondu du tout. De l'autre côté, il est avéré que, au moment de donner ma traduction, je connaissais depuis longtempss fort bien le vocable ropit "image," que plus haut seulement de \({ }_{5} 5\) lignes d'impression, dans ma traduction, on peut lire, \(\ddagger\) et qu'assurément aussi les critiques en question y ont lu, quoi qu'en tenant simplement compte de ce dernier fait, il eussent perdu un argument qui sonnait trop bien dans leurs oreilles pour pouvoir être abandonné. Cette espèce de critique est purement aventurière, comme elle rend le critiqué responsable d'idées quïl n'a jamais eues, si ce n'est dans l'imagination suréchauffée d'un critique tourmenté par "l'animosité personnelle."

Il m'est d'ailleurs arrivé plus d'une fois d'employer-dans mon susdit ouvrage-la traduction "princesse" pour le même mot, par exemple à la page 3 r , où il est dit à Amon: "Ton œeil t'apprécie en son nom remarquable de 'princesse,' se manifestant sous forme d'uræus sur ton front," etc. La meilleure preuve de l'inopportunité de la quasi-critique à laquelle, dans ce cas, j’avais été exposé,

\footnotetext{
* Piehl, Inscriptions Hiéroslythiques. Secenle Série. Vol. II, page 4 I .
+ Extrait du Recueeil, XX, page 27.
\(\ddagger\) Piehl, l.l., II, page 40 ; comme explication du groupe \(\square 0\) ? [Pienl, l.l., I, PI. LXIV, 1. 4]. Le même groupe a été également traduit "image," page 38 du Vol. II de la Seconde Súrie.
}
preure qui à la fois est une excellente illustration de l'ineptie qu'on avait faite en voulant me renvoyer à "un ouvrage qui n'est pas toul-ì-fait inconnu à M. Piehl et qui lui a rendu quelques services, le Dictionnaire hiéroslyphique de Brugsch"*-c'est l'examen des paroles imprimées à la page \(2 \mathrm{I}+\) de "Religion und Mythologie der alten Aegypter," où Brugsch dit textuellement ceci: "Der Name der himminischen Gottesmutter Repı kehrt im Todtenbuche (CLXII, 8) in der Verbindung Repit alat, d. i. "Repit die Kuh" wieder. Es ist dieselbe, welche in andern Inschriften als Requät, d. i. "die Thronfolgerin aufgefüht wird." N'y aurait-ii pas eu lieu d'appliquer ici ce qui a été dit de moi et, par conséquent. de décréter aussi; que Brugsch "a confondu simplement deux mots très différents, ropä̈̈t ' princesse 'et ropit 'statue, image " et puis d'ajouter, pour le compte du grand savant, quelque chose concernant les déboires d'un 'lexicographe avisé,' " etc.?

Théorétiquement, il est fort probable qu'il y ait une parenté étroite entre ropīit et ropit, puisque nous savons qu'en bien des cas, la lettre _- peut tantôt s'exprimer tantôt se supprimer dans l'écriture d'un même vocable hiéroglyphique. A cet égard, on peut noter les exemples suivants comme particulièrement instructifs à

 à côté de or prífixe nominal, etc. \(\dagger\)

Un bon exemple de plus d'une pareille variation dans l'écriture d'un mot défini, c'est la forme \(\bigotimes_{\square}\) que, dans le titre de fonctionnaire ertuithū, nous trourons constamment pour la forme plus fréquente sur un monument de la XII dynastie. \(\ddagger\) Cela vous

\footnotetext{
* Toir ce qu’a dit, en 1882 , il y a 16 ans, notre regretté préident Sir P. le

}
amène fort naturellement à regarder \({\underset{0}{\square}}_{\longrightarrow}\) comme identique à \(\square_{\square} 0\)

De l'autre côté, des expressions comme celle-ci: "La déesse
 "Repit à Dendérah, les temples sont solides contenant son image"* -semblent indiquer que repit "signifie autre chose que semt 'image'; autrement, on se trouverait en présence d'une tautologie."

De pareilles considérations montrent que ce n'est pas à la légère et sans raison que nous ayons, Brugsch et moi, indépendamment l'un de l'autre, admis l'existence d'une déesse repit qui serait à rapprocher de \(\square_{\square}\), au point de vue étymologique. Cette déesse qui, suivant Brugsch, est la même que Triphis des inscriptions classiques de l'Egypte, représente évidemment une forme apparentée à Hathor ou à Maāt. "La maison de Repit" est un nom fréquent du temple de Dendérah. \(\dagger\) Il est donc certain que nous avons à regarder Repit comme une déesse de l'aurore et du crépuscule.

En étudiant l'histoire de la déesse Refit, on en est pourtant amené à lui trouver une autre étymologie que celle admise par BRUGSCH et par nous-même. A l'époque de la XIIe dynastie, le nom de notre déesse s'écrit quelquefois \(\longrightarrow \square\}, \ddagger\) ce qui montre que, originairement, le sens en est "l'image."

\section*{L'NE DERNIERE FOIS, LE SIGNE for}

\author{
Par Karl Piehl.
}

Cest avec le plus profond étonnement que je viens de lire larticle, relatif à cet hiéroglyphe, qui se voit dans les Proceedings [XVIII, 1. 187-191]. Le résultat auquel, ici, M. Max Müller est arrivé, se résume dans la constatation suivante, terminant son examen du sujet en question: " \(A\) is an up to the Ptolemaic time, later on it is used sometimes for \(f\) fou, possibly even for fu."

Il me semble que M. Müller a omis d'examiner à fond mes exemples des Procecdings [XI, p. 224], car autrement il lui aurait Été absolument impossible de formuler, en 1896, la conclusion qu'on vient de lire. Dans la série de mes exemples, il y en avait de la XII \({ }^{e}\), comme aussi des XVIII \({ }^{e}-\mathrm{XX}^{e}\) dynasties, pour lesquels léquation \(f={ }^{2}\) était démontrée d’une façon indubitable. Dans ces circonstances et, comme les paroles de M. Müller sont en fartie appuyées par l'assertion énoncée dans la matière par un autre collègue,* on me permettra sans doute-dans l'intérêt de
* C'est M. Maspera, qui [De Morgan, Fotilles it Dakiour, p. io5, note I] en 1894, se prononce de la sorte dans une letre axiressće à M. de Mokgax: "Je regrette que la vieille lecture fou, zoou de f \(\$ 7\) ait été seule connue autour de vous: riaci de lon rutes annies (!) phion ne l’admet plus, et elle rous a empêché aialentifice et de placer votre roi- \((\odot)\) Whamaixx . . . vous aurait donné deux rois de la XIII dynastie qui portent le meme nom: sewlement Whamaxi, transcrivant comme il consient for par aom, an, les cite sons le nom correcte de Ria-autu-aty . . . C'est donc . onowthathi, Awou ton abra (ouri) que s'appelie rúdlement le personnage,
 "thenis aunat dit eons le dire." Doprès ces paroles, il faut croire que par cample lismax et mon-thus les deux admettant la lecture fir pour le signe for ne - momeral'as "an courant dee ce qui s'est fait clans les quinze dernieres années" en isyptomgic.
la vérité scientifique－d＇extraire à cette occasion de mon susdit mémoire les exemples appartenant à des monuments antérieurs à l＇époque gréco－romaine［ceux des basses époques étant pour le moment inutiles，l＇équation \(\mathscr{F T}={ }^{x} \widehat{e}\) ayant été réconnue pour celles－là par mon honorable contradicteur］．

Voici donc les dits exemples datant de la belle époque hiéro－ glyphique：

prince，le très puissant parmi les gens de marque．＂

la Haute et de la Basse Egypte，maître de joie，le très vigoureux à l＇instar de son père Tanen．＂
c．© éminemment large．＂
 ．．．．．．＂celui qui fait connaître à chaque personne ses devoirs， celui qui fait des largesses dans ＂
e．\(\square\) 为 de terreur．＂
f．\(\prod_{1}^{2}\) 原 911100 ＂Vaste par puissance，（sorti）du ventre de Nout．＂
g．品 formidable par vaillance．＂
h．Anes \(\prod^{2}\) puissance．＂

De ces exemples，ceux donnés sous les lettres \(a\) et \(d\) datent de la XIIe dynastie－l＇un étant emprunté à Mariette，Abydos，III， 121，l＇autre à la stèle C 26 du Louvre－tout le reste proviennent de monuments appartenant à la XVIIfe－NXe dynastie．Je trouve inutile de donner maintenant les renvois pour chacun des derniers， le lecteur pouvant facilement se renseigner à cet égard dans les notes au－dessous de la page des Proceedings［NI，p． 22 I］．

Aux exemples cités, nous en ajouterons deus nouveaux empruntés à un texte * de la \(\mathrm{XX}^{e}\) dynastic. Les voici:
 la puissance et le respect parviennent aux limites (?) de la terre."
 puissance et la majesté terrassent les neuf peuples d'arc."

Finalement, j'evtrairai de l'ouvrage, relatif à "Siut et Der-Rifeh," de M. Griffith, quelques nouveaux specimens de for dans la valeur de fu. Ce sont les suivants:

 fection, celui à qui le maitre des deux pays offre ses richesses, celui qui se réjouit de la guidance du roi."
 \(\wedge \ddagger\) "Celui auquel le roi a donné sa puissance, le guide habile 2 auprès de son supérieur."
 ment \(u n\) mot.]

Les exemples \(l-n\) datant, selon M. Maspero, \(\|\) de la fin de l'Ancien Empire, il est impossible de ne pas leur accorder une certaine autorité dans le débat qui se poursuit.

On roit donc que partout-à partir de la fin de l'Ancien Empire jusqu'aux derniers moments de l'Égypte ancienne-le groupe ff "large, riche, puissant, largesse, puissance," etc., s'écrit ou peut s'écrire "मे ir , c'est-à-dire à l'aide d'un initial. Cela étant, il reste acquis que notre signe est ì lire, pour toute cette longue période, fu. Il faut donc évidemment reconnaître l'éxacti-

 ce dernier mot, on peut rappeler l'existence du nom propre d'hcmme \({ }^{2}\) ) 0 , datant de l'Ancien Empire.*

Loin donc d'accepter le compromis que nous propose MI. Max Müller, nous maintenons au contraire la position qu'une fois nous avions prise, position qui comme on voit, scientifiquement, peut se soutenir à merveille.

Des remarques qui précèdent, il résulte que la thèse, énoncée sur le ton d'un oracle, suivant laquelle le cartouche \((\odot \infty)\) ne devrait nullement se lire Ra-fu-äb, est complètement erronée.

Je ne pense pas nécessaire d'éxpliquer maintenant au long mon acception de la lecture qu'offre les textes des pyramides pour le signe \(F\). J'en ai parlé suffisamment dans les Proceedingrs, AV, p. 488. Et M. Max Müller n’a pas encore réfuté mon raisonnement concernant le hiatus qui expliquerait la présence de for dans certains mots dont les variantes offrent des formes sans \(\times \sim\) ni 居.

\section*{A profos des deux sceaun hétéens. Par K. J. Basmadjan.}

No. I.

No. 2.
" Ilandes Amsoreaj," la revue mensuelle des PP. Mekhitharistes de Vienne, a publié dans son numéro de Mai (1898, p. I 39) ces "deux sceaux hétéens" * appartenant à un antiquaire de Kaïsérié (Císarée) et provenant da Malatia (Mílitione). Les deux sceaux sont en argent, comme la plaque dite de Tarkondémos. Le premier de ceux-ci est grand et tout à fait pictographique ; il n'y a pas un signe de hétéen, ni même le snoz-boots, c'est-à-dire les bottes pointues courbées en haut pour pouvoir marcher sur la neige, la caractéristique des monuments hétéens, qu'a remarqué le premier M. le Prof. Sayce. Tandis que le deuxième sceau est un peu plus petit et porte les caractères hétéens aux nombres de sept, sans compter les deux \(\mathbf{O}\).

Quelle est la valeur de ces signes et it qui appartient le sceau? -Jusquà̀ ce jour nous navons qu'une seule petite inscription bilingue-la fameuse plaque de Tarkondémos-qui ne nous permet, mulgrí des recherches séricuses, que des suppositions et des hypothéses. F'armi les savants qui se sont occupés de llhétéen, comme MNI. les I'rofs. Sayce, Haléry, etc., etc., M. le Prof.

Je dois ces empreintes à lomalilité de mon ami le Rér. P. Grigoris Dr. Nalemkiarean, Mekhithariste de Vieme.

Jensen nous présente son système de déchiffrement, dans un travail récemment paru: Hittiter und Armenier, Strassburg, 1898. Donc nous avons aujourd'hui sous la main différents systèmes pour arriver à déchiffrer et traduire les inscriptions hétéennes. Ainsi selon M. le Prof. Sayce la langue des Hétéens appartient au dialecte des inscriptions vanniques et à la langue de Mitanni. Selon M. le Prof. Halévy la langue des Hétéens appartient aux idiomes de la Cappadoce. Et selon les autres, cette langue appartient aux langues sémitiques. M. le Prof. Jensen prétend au contraire que la langue des Hétéens appartient à l'arménien ; mais il lit leurs inscriptions à l'aide de l'arménien moderne ! * Seulement il a la chance de trouver la valeur idéographique de quelques signes, ce qui nous conduit à déchiffrer notre sceau.

Les caractères de ce sceau sont cursifs, composés de simples traits; ce qui nous permet de le placer dans une époque plus récente que les inscriptions de Hamat, de Djérabis et de Marachei où les caractères sont hiéroglyphique.

Le premier signe, en commençant de haut en bas à la manière boustrophédon, correspond au d No. i de Jensen, qui donne la valeur idéographique de "grand."

Le deuxième signe correspond au b No. 6 de Jensen, avec la valeur de "roi," "prince."?

Le troisième correspond au b \(\beta\) No. 3 de Jensen, domnant la valeur de "Mut(d)al-."

Le quatrième correspond au B a No. 7 de Jensen, et au No. 25 de Ménant, \(\dagger\) qui lit avec Sayce: ir, ri? Jensen lit: \(\mu\). Ici nous préférons la lecture de Sayce, \(r i\), ou mieux: li, à cause de \(r=l\).

Le cinquième correspond au ba No. io de Jensen, qui donne la valeur de "souverain, dominateur." Il peut correspondre aussi au b a No. i8, avec la valeur de "fils."

Le sixième correspond au III No. 4 de Jensen, et au No. 20 de Ménant, avec la valeur syllabique de er. Jensen ne donne aucune valeur à ce signe ; il croit que c'est un " wortbeschliesser." Nous ne sommes pas d'accords de ncuveau avec M. Jensen; car si le troisième signe de notre sceau a la valeur idéographique de Mut \(d\) ) alavec le complénent phonétique de \(l\) i, et, si le cinquième signe a la

\footnotetext{
* Il y a quatre ans que j'avais fait la même observation à M. Jensen, observation parue dans la même revue arménienre, "Handes Ainsoreaj," Décembre, 1894, p. 383.
\(\dagger\) Eléments du syllabaire hétéen. Paris, 1892.
}
valeur idéographique de "souverain," il est certaine qu'il faut absolument chercher ici des signes ayant la valeur syllabique de kum et de muh, ou bien un signe idéographique pour désigner le nom du paỵs de Ǩummul?. Nous arrivons à cette hypothèse à l'aide des inscriptions de Sargon (722-705 av. J.-C.), où nous trouvons trois fois mentionné le nom d'un roi hétéen qui était un de ses principaux adversaires, et qui s'appelait: Mut-tul-u (mìtu) Ǩum. \(m u-h u-a i=\) " Muttallu (roi) du pays de Kummuḥ," (Anmales, ll. 95 et \(38 S\); Fistes, l. in 2 ). Et pourtant nous avons deux signes encore, l'un est celui que nous venons de citer, et qui, selons nous, doit avoir la valeur syllabique de kum; l'autre c'est le septième signe, qui doit avoir également la valeur de mut, et qui manque dans la liste de Jensen. Suivant les inscriptions de Salmanassar II, on peut également chercher ici le nom du pays de Gamgum; car Salmanassar II ( \(860-825\), av. J.-C.) parle d'un autre Muttallu ou Mutalli, son contemporain, qui était roi hétéen de Gamgum: Mu-tal-li (inâtu) Gam-gu-ma-ai = "Mutalli (roi) du pays de Gamgum." (Monol., col. I, ll. 40 et 4 I\()\). Dans ce cas, nous serons obligé de changer la valeur donné au sixième et au septième signe de notre sceau; alors nous aurons \(g^{r a m}\) et \(g^{\prime} u m\), au lieu de kum et mul., ou un seul signe pour l'idéogramme de Gamgzm. Mais, tout au contraire, si le cinquieme signe correspond au b a No. iS de Jensen, ayant la valeur idéographique de "fils," nous arrivons à une autre lecture, nous appuyant sur le nom du père de Muttallu. Ainsi nous savons par les inscriptions du meme Sargon que le père de Muttallu
 \(\ldots\). \(=\) "Tarḥulara (roi) du pays de Camgum, que son fils Muttallu. . ." (Annales, ll. 202 et 21 I : Fastes, l. 83 et S.4). Or nous devons avoir ici les expressions phonétiques de tartut et de lara. Ce n'est pas étonnant que nous ayons sur notre sceau le signe de tarlh(k)u, lu jusqu'aujourd'hui dimme d'après la plaque de 'Tarkondémos, et lu (BI-Bl-)U(-AS̆-S̆E) par Jensen. C'est le septieme signe même de notre sceau, déjà connu dès les premier jours des études hétéennes, c'est-it-dire depuis la reconnaissance de la plaque de Tarkondémos. Jusfu'ì présent on ne l'a pas rencontré ailleurs que sur les sceaux de M. I). (i. Hogarth.*

Je ne puis rien dire pour les deax 0 .

\footnotetext{
* Voir ces sceaux dans Recucil de Trazaux, cti., de M. le Prof. Maspero, 1895, p. 25-27.
}

Ainsi en supposant que sur la plaque de Tarkondémos indique＂chef，souverain，＂解产 se lit tark \(k\)（k）u et 0000 dimme， nous arrivons à cette conclusion que le dernier signe de notre sceau攺 doit avoir la valeur phonétique de lara．Or en réunissant tous ces signes，nous avons：＂Grand roi Muttall（i）u，fils de Tarḅulara．＂

Cette interprétation est admissible d＇autant plus que le sceau vient de Malatia，pays voisin de Ḳummuḷ，appartenant également au même roi Muttallu，fixé sur un passage des inscriptions de Sargon，qui dit：Nyut－tal－lum（mâtui）Kiu－muth－haç－ui ．．．．．（âlu） \(M e^{*}\)－lid－du alu－šu rabu－a u－s̆ud－gi－lu pa－nu－ǔ̌－su ．．．＝＂Muttallu （＝roi）du pays de Ḳummul？．．．．j’ai subjugué sa grande ville Malatia devant lui．．．＂（Amuales，ll． 3 S8 et 390．）D＇après ce passage le roi Muttallu dominait à Malatia vers l＇an 712－70S av．J．－C．Outre cela nous avons une autre preare：L＇inscription hétéenne d＇Arslan－ tépé，tout près d＇Orda－sou（Malatia），nous montre que Muttallı était en effet roi de Commagène（ Ḳummuh）et de Mélitène（Ifeliddu）． Dans cette inscription Jensen lit le signe \(\int_{=}^{2} \operatorname{Mut}(d) a l\)－，le nom du roi de Ķummuḷ．\(\dagger\) Or，comme de l＇aveu de tous，les sceaux doivent généralement porter la légende des noms propres，il est bien probable que nous avons ici dans le même signe le nom du même roi， Muttallu，gravé sur son sceau．

Comme nous avons fait remarquer plus haut，le livre des M．Jensen n＇est pas un ouvrage complet ；il y manque des signes qui sont déjà connus ailleurs．Quant à la langue，M．Jensen a les mêmes inten－ tions que feu Mordtmann avait pour la langue des inscriptions van－ niques，sans pouvoir nous montrer un point d＇appui assez solide．On peut se demander：Si les Hétéens sont des Proto－Arméniens，et si leur langue est l＇arménien，pourquoi ne peut on pas expliquer à

l'aide de l'arménien tant de noms propres hétéens connus par les inscriptions égyptiennes, assyriennes, et par les auteurs classiques? Etant Arménien, je voudrais bien que cette gloire soit donnée à ma langue maternelle, s'il y a des preuves suffisantes. Mais nous ne pourrons dire la vérité qu’au moment où on aura la chance de trouver une autre inscription bilingue. Enfin disons avec F. Lenormant, "Nous n'avons besoin que de savoir attendre."

\section*{Queens' College, Cambridge,}

May 4, 1898.
Dear Sir,
The following note on the last portion of H. Winckler's Altorientalische Forschungen may be of interest to your readers:-
"On page 4 ff . the text of K. 6223 and K. 6332 from the Kouyunjik Collection is published in transcription. Then follows a shrewd discussion of the bearing of these texts on Assyrian history. The acumen which Dr. Winckler has always displayed renders anything he may say deserving of respect: but he has oddly mistaken the nature of these documents.
"The B. M. Catalogue calls them 'Historical Inscriptions,' and ventures the opinion that the latter belongs to Assurbanipal. They both belong to the class of tablet which the Catalogue indifferently calls 'private contracts' or 'proclamations.' Dr. Meissner calls the same Freibrief. They recount the donation of extensive property to some officer of the king, evidently in reward for distinguished services. The king in question in the above two cases happens to be Assur-edil-ilâni, of whose inscriptions so few have been preserved."

I am, yours obediently,
C. H. W. JOHNS.

\section*{BIBLICAL CHRONOLOGY.}

\author{
524, Penn Avenue, Pittsburgh Pa., U.S.A.
}
W. Harry Rylands, F.S.A.

Dear Sir,
The contribution of Doctor Jules Oppert in the Proceedings of January 11 th, 1898 , deserves the thanks of all who are in any wise interested in the subject of biblical and comparative chronology. It certainly presents a very suggestive view of the entire period, and is especially notable as a vigorous renewal of the controversy, if not a marked reaction against the schemes which have come to be so largely accepted, but which tend so greatly to discredit the Hebrew writers, and lessen faith in the integrity of the Scriptures, as well in alleged historic events as in their reputed inspiration. This re-assertion of continued and unflinching faith in the biblical chronology seems to indicate progress in the right direction, buttressed as it is by suggestions and proposed expedients, some of which may, perhaps, be just as applicable as the date now most generally accepted and finding its place in "the books," as to the change to \(\delta 09\) e.c. proposed by this distinguished Orientalist.

In this change proposed it is, however, feared that there may lurk an element of uncertainty which might be fatal to any attempt to establish a date from which "to compute forward and backward" as is now done from the basis 763 b.c. It is also thought that the suggestion of a "gap" or interval of some forty-six years during which the list of eponyms is found in the "Eponym Canon," does not seem to have any absolutely sure foundation, nor is it necessary on the basis of 763 b.c. Neither do there seem to be data determining with positive certainty the exact place or places where the omissions or eliminations have been made, nor is it known assuredly whether this interval is made up of several small
"gaps" or consists of one continuous succession of years. It may be conceded that where the Canon states that a solar eclipse occurred in the year of a certain eponym, the date of that eponym can be accurately determined ; and so also that by the proximity of the eponym of the reigning monarch, the date of the beginning of his reign may be ascertmed: it, "according to the ancient usage," being " the second complete year of the king's reign." (Schrader, Cunciform Insiriptions and Old Testament, Vol. 11, p. 167, note.) Thus Salmaneser's eponym year was \(S_{5} S\), the year of his accession S60: the eponym year of Tiglath-pileser was 743 , the year of his accession \(7+5\) (ibid., p. 182). But it is obvious that unless there is somewhere found a positive statement of the dura ion of his reign, such as in an inscription or some well established authority, that duration can only be satisfactorily determined from the eponym canon, when it is certain that this ancient usage was invariably maintained, and that there is no break, no lacuna in the list of eponyms subsequent to his eponymy. With these uncertainties, or this undetermined or floating element, there would seem to come a chaotic condition into the Assyrian chronological system largely affecting is worth, and certainly disqualifying it for discrediting other systems or raunting its superior reliability.

By Dr. Oppert the "gap" is assumed to have occurred after the reign of Assurnirar, the ending of which is ordinarily and by him also dated 792 b.c. But if the "gap" in eponyms began there, it is possille that this king reigned later than this date would indicate, and it cannot certainly be known when Belesys began his reign over Assyia, even if we knew when he began to reign over Babylon, nor how long he held the throne. There is therefore, very properly, no attempt made by Dr. Oppert to definitely determine the number of years of his supposed reign, farther than to suggest its limit hy what is gathered from a biblical source as to the reign of the king of Assur therein named Pul, who exacted tribute from Menahem, the king of Israel, whose reign is usually put \(772-761 \mathrm{B.C}\). But of this Pul, except as he mayle identified with the Porus, l'ulu, or l'ul, who for a brief period seems to have ruled over liabylon, no account whatever has been thus far found in the Assyrian records, and this identification is, by br. Oppert, declared to be "insensate." There is, therefore, no data derivable from either Hebrew or Assyrian sources by which to determine in what year of Menahem's reign this tribute was taken.

Concerning this Pul, Oppert writes: "King Pul of Assyria, the contemporary of Menahem, reigned before 762 b.c. He preceded the dynasty beginning with Nabu-sum-ukin, the predecessor of Chinziros, who mounted the throne in \(73^{1 \text { e.c. He is of course }}\) more than thirty years anterior to the second Pul, the Poras of the Ptolemaic Canon, the antagonist of Tiglath-pileser, whom be turned out from Babylon at least once, if not twice." But to this the objection seems to be that the names Pul, Nabu-sum-ukin. and Nabonassar are not anywhere found in the Assyrian records or lists as kings of Assyria ; that, down to 607 b.c. the lists in which they and Chinziros (Ukinzir), Poros (Pulu), appear, are distinctively rulers of Babylon, for the most part subordinate to the kings of Assyria until B.c. 607 , except in those cases where well known kings of Assyria in person administered the affairs of the province, e.g., Tiglath-pileser (if Pulu), two years; Sargon, five years; Sennacherib (?), eight years ; Esar-haddon, twelve years. The two years of Poros (Pulu) in the Canon or list of Ptolemy are clearly contemporaneous with the two years of Tiglath-pileser, so that either Poros was subordinate to Tiglath-pileser, or the two names belonged to one and the same person. This identity seems to be corroborated in I Chron. v, 26 , where the verb "carried" in the singular number requires the conjunction after Assyria to be rendered by "even" instead of "and." It is so rendered in the second subsequent clause. The verse would then read: "And the God of Israel stirred up the spirit of Pul, king of Assyria, even the spirit of Tiglath-pileser, king of Assyria, and he carried them away, even the Reubenites," \(\mathbb{\& c}\). Now, since the bible is the only incontestable documentary authority for the name and title "Pul, king of" (Asshur) "Assyria," it would seem that this third mention of the name and title, accompanied by the appositional or exegetical clause, ought to be an amply sufficient authoritative assertion of the "identity of Pul and Tiglath-pileser," especially while its direct contradiction by any authoritative " historical document " does not clearly and indefeasibly appear.

The most serious hindrances to a satisfactory synchronization of the Biblical and the Assyrian records arise from uncertainty or perversity in the interpretation or identification of certain proper names and events mentioned in the inscriptions. For instance, the names "Ahab of Israel" are persistently read for "A-ha-ab-bu Sir-'a-la," or "Sir-'lai," which occurs in the list of the allies of Irkhulin of

Hamath in the battle fought at Qarqar with Shalmaneser, some forty years after the supposed biblical date of Ahab's death. Dr. Oppert's date escapes the chronological anachronism, but why an Israelite king should furnish ten thousand men and two thousand chariots to a Hittite king, and should suffer their "loss" without an impairment of strength, or even reference to it by prophet or historian, and how, indeed, he came to have so many chariots, are questions to which Dr. Oppert affords no answer, but which deserve consideration and inspire doubt. The name "Sir--lai," lacking the initial yod (I) is not indisputably " Israel," and seems not to have been elsewhere found. The same Shalmaneser in the same inscription uses the expression "Abal Hu-um-ri-i," son of Omri, to identify the king of Israel who twelve years afterward paid him tribute. The unchallenged names of Israel from the time when first referred to are, according to Schrader, "Mat bit Hu-um-ri," land of the house of Omri, or "Mat Hu-um-ri," land of Omri ; "Sa-mi-ri-ma," Samaria (pp. \(178, \mathbf{1 7 9}\) ), and these names are used from the time of Shahmaneser II to Sargon, after whose reign the land is never again mentioned (p. 181). That he should use a name to designate Israel never before and never afterward found in use for that purpose, nor indeed for any purpose, since it is never again found, is altogether incredible, and the interpretation is absolutely unsupported by any other evidence. The same list contains the name of Baasha of Amana, apparently a Hittite chief; and if one Hittite may bear the name of a dead Israelite king, why may not another Hittite bear the name of the Israelite king Ahab, though long since dead?

Whether this change of date holds good or not, it is still believable that "Ahabbu mat Sir'-la ai," was not Ahab the son of Omri. It is apprehended that, if the name preceding "Sir--la-ai" had not been the same as that of a previously reigning king of Israel, "Sir-'la-ai" would never have been read "Israel." In the same list "Mu-us-ra-ai" was interpreted "Egypt." In \(18 S_{9}\), in a paper then published, it was suggested that this was not Egypt, and it is now relegated to the north towards Cappadocia. A similar mistake is most likely made in the identification of ljen-hadad, the commandant of the Damascene contingent in the same battle of Qarqar, with the king of that name contemporary with Ahab, rather than, as is chronologically more probable, with the Ben-hadad son of Hazael, who in the wars with Israel during his father's lifetime led his
father's armies, and so also would be the commander of this contributory force.

The case of Jehu, on the doubtful, but at present accepted, theory, would occasion no trouble on Dr. Oppert's scheme, but internal evidence seems to point strongly to Jehoahaz (Ja-u-ahaz) as the particular Ja-u among the Ja-u's who paid the tribute. ( \(C f\). Pharaoh, common to the rulers of Egypt, as was Ja-u, either as prefix or suffix common to the rulers of that age of both Judah and Israel.)

The solutions suggested for the case of Jeroboam II and that of Menahem, the latter by the interpolation of a second "Menahem of Samirimai," would be equally applicable to the system based on 763 b.c. as the starting point, though to the later Menahem there seem to be no serious objections.

The identification of the Azariah of the inscriptions attributed to Tiglath-pileser as the "son of Tabeel," the pretender to crown of Judah against Jotham and Ahaz, would suit the 763 r.c. basis just as well as that of \(S_{0} 9\) or 930 . These inscriptions are, indeed, so fragmentary, and hence of such uncertain meaning, that it seems impossible to determine with certainty from them the exact relation which Azariah and the author of the inscriptions sustained one to the other, and the unsuccessful "son of Taleel" may, perhaps, better fill up the "gap" than did the earlier and prospercus Uzziah, he having the great advantage of exact contemporaneity with the Assyrian, the Syrian, the Israelite and the Jewish kings named in both cuneiform inscriptions and Hebrew story. In these cases thus treated the Biblical chronology suffers no special lamage. Possib!y, however, other solutions hereafter suggested may be found less encumbered with difficulty, and may be preferred.

In Dr. Oppert's charge that "among so many genuine figures" there is "one false number" in the story of king Hosea, it is apprehended that the text ( 2 Kings \(\mathrm{xv}, 30\) ) breviloquently quoted, is misunderstood, and therefore misinterpreted. For this, which is indeed the common inaccuracy, we charge no "mala fide," but simply suggest a different exegesis in accordance with the developed history. The text in our common version in full reads: "And Hosea, the son of Elah, made a conspiracy against Pekah, the son of Remaliah, and smote him, and slew him, and reigned in his stead, in the twentieth year of Jotham, the son of Uzziah." Thus is anticipated, in condensed form, the entire story of Hosea. the
details being subsequently given. It is observable that it does not say "in the twentieth year of (the reign of ) Jotham," but simply the "twentieth year of Jotham," the meaning of which, if ascertained at all, must be elsewhere found. In the fifth verse of this same chapter of Kings it is stated that prior to his father's death Jotham had been "over the house" (of his father), "judging the people of the land," for a period not definitely limited, except as it may be inferred that his rule began immediately after the judgment upon Uzziah, the date of which is nowhere given. After the death of his father, according to the biblical writer, Jothan reigned sixteen years, having begun his reign in the second year of Pekah's reign. If, then, the expression "in the twentieth year of Jotham" is understood to be the twentieth year of his continuous public life, or from the beginning of his acting over the house, or judging of the people, it must consist of the regency or official life before his father's death, and so many of the years of his actual and sole kingship as would bring him to the twentieth year. Taking, then, I)r. Oppert's figures, the sole reign of Jotham began \(75^{8}\), the second year of Pekah. The last year of Jotham's reign therefore falls in \(7+2\). But in 744 Menahem ejects Pekah and reigns in his stead. It follows, therefore, that if Hosea rebelled or conspired against Pekah in Jotham's lifetime, he must have done it either contemporaneously with Menahem, or earlier, and the twentieth year of Jotham's continuous rule must therefore have fallen not later than \(7+5\) or 744 , and his official authority over the house, and judgeship of the people, must have begun five or six years before his father's death. In 735 Pekah in turn ejects Menahem, and regains his throne, and reigns contemporaneously with Ahaz some five years (735-730), when in the twelfth year of Ahaz, Hoshea's rebellion gives him the mastery, and by the murder of Pekah he gains the throne. That this interpretation is neither incredible nor forced, and that it perfectly harmonizes the syopsis or condensed outline or preliminary contained in xy, 26-31, with the subsequent detailed account of the reign of l'ekah, may more fully appear from a simple re-arrangement or transposition of the clause of the preliminary outline, thus: "And Hoshea, the son of Elah, made a conspiracy against Pekah, the son of Kamaliah, in the twentieth year of Jotham, the son of Uzziah, and smote him and slew him and reigned in his stead." It was the conspinacy and relsellion then which took place in Jotham's twentieth year, as is further proved by the fact clearly stated, that

Pekah was still reigning after Jotham's death up to the twelfth year of his successor's reign, and even according to the very ingenious suggestion of Dr. Oppert, had continued on the throne in his last years contemporaneously with Jotham's successor, Ahaz. Neither the original author nor any scribe or "redactor" could be supposed to be so forgetful or so ignorant and stupid as to write that a king was still reigaing, whom he had just declared had been slain before the accession to the throne of the king with whom he declares this king was contemporary. That the text is corrupt surely has no other evidence than a somewhat jumbled or confused manner of stating the general anticipatory survey of the reign subsequently more carefully and fully detailed or itemized. The only authorities for the text are not said to differ in any respect from the text which was used by the translators of the English version, so far, at least, as is known to the present writer.

Re-adverting to the introduction of the earlier Pul : a verification of his historicity would certainly satisfy certain chronological conditions, and serve to account for his part of the omitted years. It labours, however, under the disadvantage of indefiniteness as to the number of lis years, and thus far nothing concerning him is known, except the single incident of the exaction of tribute from Menahem of Samirimai. If Assyriologists still persist, despite the re-affirmation, after so many years, by this distinguished authority, " of the creators of Assyriology, the only surviving one," in their nonacceptance of this Pul, and adhere to the 763 basis, and in the identity of the one Pul and Tiglath-pileser, perhaps help to a solution of the problems comnected therewith may be found in the revolutionary unrest characteristic of the eighteen years which preceded the enthronement of Tiglath-pileser in 745 e.c., this unrest first manifesting itself in the revolt of the city of Asshur in the twelfth year of Assur-dan III (or Assur-edil-el) in 763 b.C. This revolt must have had a leader, but none is by name recorded, and the disaffection was sufficiently widespread to make it probable that whoever the leader may be, he would assume to himself the title, and exercise, as far as possible, the authority of a king of Asshur or Assyria. If this leader was successful, it may be expected that he would, in his inscriptions, follow what seems to have been the custom of that age, that a usurper should give no account of his struggles or exploits before he obtained the crown, unless they could be so given forth or grouped as to be made to appear as performed
after he had ascended the throne, their priority in date being, therefore, carefully suppressed.

The account given in 2 Kings \(x v, 19,20\) of the appearance and operations of Pul accord well with the theory that he was a rebel, assuming to be king of Asshur or Assyria, and that this irruption was rather of the nature of a raid to replenish an empty treasury than of a regular expedition for conquest or permanent occupation. What he received from both Rezin of Syria and Menahem was in money, which would be to him of the greatest value and service, and the enormous tribute demanded and paid seems to indicate his great necessity. It is not at all improbable that an attempt was at the same time made, but without success, to extort tribute from Azariah and others with whom he seems to have been in contact. Pul was never more heard of in Israel, and his name does not appear in the account of this period found on the monuments. Yet in the inscriptions attributed to Tiglath-pileser III the claim is made that tribute had been paid by Rezin of Syria and Menahem of Samaria, and the name of Azariah is also introduced as king of Judea, the inscriptions, however, being so imperfectly preserved as to render it altogether uncertain whether he was friend or foe, the latter being the most likely. Assuming now that during these eighteen or more years this rebel king persisted in his effort to overthrow the reigning (lynasty, and at length, reinforced by the rebellion in Calah (Kalah), he succeeded in placing himself on the throne, taking the name 'Tiglath-pileser, discarding his real name Pul, whirh nevertheless was retained in Babylon and the Ptolemaic canon, and we have a solution of this chronological problem, not less credible nor less in accordance with known facts than the result attained by the expedients resorted to on the basis of Sog.

It is apparently confirmatory of this suggested solution that in twice giving an account of his reign from its beginning to its seventeenth year, Tiglath makes no mention of this tribute, either of Rezin or Menahem, nor does the name of Azariah therein appear. In the inscriptions attributed to him, but to which his name as author is in no way affixed, in which these names appear, there seems to be no attempt at chronological order, nor any date given to the several matters described as affecting Northern Israel, but simply a purpose to state that fact that at some time and place rertain things had been done by him or under his authority, among other things he had taken tribute from Kezin and Menahem, and
had had some relations to do with Azariah, but when, and in the latter case what, is not clearly indicated. It is, however, certain that when he gives a list of tributary kings and states, he does not number among them Azariah, nor does he include the kingdom or a king of Judah among them until the list appears in whicn Ahaz is found as king of Judah, under the cognomen of Ja-u-ahaz (i.e., the Ja-u- whose proper name was Ahaz). This long continued struggle for the mastery well justified Hosea in twitting the northern kingdom with its having been cheated by this adventurer, fittingly nicknamed " Jareb," " the struggler," "the combatant." It may be confessed that as to Azariah, the referring this name to the "son of Tabeel " is preferable, and the above suggestions as to this king are made simply as possible alternatives, if the suggestions of Dr. Oppert and of his distinguished pupil, Lenormant, are rejected.

Attention may now be given Rodwell's note that the inscription of Assur-nasir-abal may "refer to the eclipse of the 13 th July, \(S_{5}\), 122 years earlier than that of 763 " (Reiords of the Past, Vol. III, p. 43). For if there was an eclipse at that time, the method and data used by Dr. Oppert will confirm the 763 date just as satisfactorily as that of \(S \circ 9\), if it is true, as is claimed by Schrader and others, that the year of the king's accession antedated his eponym two years; for both computations admit 120 eponyms between the eponym year of Assur-sezib-ani and the date of whichever eclipse is taken as the basis, differing only in the time between the king's eponym and his accession, Oppert allowing only one year, others, as above stated, claming two years. Thus, taking two years, Oppert's date for the accession is 93 I , when it is not claimed that there was an eclipse, while on the 763 basis the date would be 885 , the year of an eclipse. On the other hand, allowing only one year, gives 930, the year taken by Oppert, when the eclipse occurred, but given on 763 basis 884 when there was no eclipse. It is on this ground that Oppert claims that the eclipse of Sog, in the eponomy of Purilsagali, is the true basis compute-the true starting point for chronological exactness. But it still remains to be proven that the invariable rule was one year as is assumed by Dr. Oppert, whose Assyrian king list is computed on this theory down to Tiglath-pileser, whose eponymy (743) was two years (745) after his accession.

The case of Shalmaneser III, however, seems to lend strong confirmation to Dr. Oppert's theory, for the first battle of Qarqar
was fought in his sixth year, in the eponomy of Dan-asur, on the 763 basis, b.c. 88 . Obrionsly, on this theory and basis, the accession year must be put at 859 , and not, as Schrader has it, at 860 ; this use of one year, with the \(\psi^{6}\) years' "gap," gives on the 800 basis 930 , the eclipse year, as the accession year of Assurnasirabal. This difference is a matter in which "biblicists" are more or less interested, but which chiefly concerns Assyriologists, and must be by them finally settled if certainty is to be attained.

Beliering with Dr. Oppert that "all different systems concerning as well Assyrian as Judean history, which are in contradiction to the biblical statements must be rejected," and "strictly respecting the written numbers," and that "we must bow to these statements, because the men who wrote them were better instructed than we are, who, apart from their testimony, could know nothing about the honestly transmitted tradition ;" attention may now be given to the actual treatment which the "written numbers" have received.

We take up the case of Ahab. The Bible gives him twenty-two, Dr. Oppert twenty years (920-900). At the close of goi B.c. he had reigned his full 30 years, and Shalmaneser his full five years. Now the battle of Qarqar was fought in 900 b.c., Shalmaneser's sixth year. In his last year Ahab was at war with Syria, and was slain in battle at the siege of Ramoth-gilead. Construing Oppert's figures strictly, this was in the year before the Qarqar battle, and it seems utterly incredible that in that last year of his life Ahab could possibly have crowded into it so much as he is represented to have done, if this battle is to be added to the biblical account, even on the assumption that his last year was contemporaneous with Shatmaneser's sixth year. Had the liblical numbers or reign of twentytwo years been taken, no incredibility could have attached to the story.

In his eighteenth year Shalmaneser reports that he received tribute from "Ja-u-a," son of Omri, assumed to be Jehu, the son of Nimshi. This is probably a mistaken identification. Ahab was succeeded loy Ahaziah, who reigned two years, shortened by Oppert to one year. Joram, his successor, is accorded twelve years. Now on the assumption that Alaab, was at the battle of Qarqar in Shalmanescr's sixth year (1, c. 900), and died the same year, we have for the subsequent reigns between Ahab and Jchu, according to Oppert, Ahaziah one and foram twelte to thirteen years, which brings us to b.c. 837 according to (1ppert the nineteenth year of Shalmaneser. On this
count the tribute was paid one year before Jehu began to reign. If we take the biblical number for Ahab, we have for him, after the battle of Qarqar, two years, for Ahaziah, two years, for Joram, twelve years \((2+2+12)=16\) years, bringing the date of the beginning of Jehu's reign to \(S S_{4}\) B.C. ; so that on this calculation Israel paid the tribute four years before Jehu was its king. By an accurate use of these figures, indeed, it seems to be shown that on neither of these schemes does it appear that Jehu could have paid tribute in Shalmaneser's eighteenth year, since according to neither was he king in that year.

It has already been herein suggested that Ja-u had about the same relation to the proper names of the kings of both Israel and Judah, that Pharaoh had to the proper names of Egypt's kings, being found as a prefix (Jeho, i.e. Ja-u) or suffix (iah, jah) to the names of many of the kings of both kingdoms, so that Shalmaneser may have intended to say that he received tribute from the Ja-u who then ruled over the land of Omri, without giving his personal name, the full name being readily found by reference to Israel's history at that date to be Jehoahaz (Ja-u-Ahaz).

If it can be shown that it had not been always before Tiglathpileser "a rule without exception that the king himself occupied the office of the annual officer " (eponym) " the year after his accession which took his name," it need not be difficult to synchronize the biblical chronology on the 763 basis. For this purpose some of Dr. Oppert's suggestions might, perhaps, be used to acivantage, and harmony be secured somewhat as below briefly outlined.

Reject the theory that "Ahab the Sirlite" was "Ahab the Israelite." Let "Ja-u-a, son of Omri," be identified as the Ja-u reighing at that date over the land once dominated by Omri, viz., Jehoahaz. For the eleven years of Jeroboam, accept the Syrian irruption, or count the "gap," as due to the existence of anarchy or civil war, either before or after the accession of Zachariah. Let Pul be accepted as the rebel leader of the revolt in the city of Asshur in the reign of Assur-dan, contemporaneously with Menahem and Azariah, and that he made this raid into Israel and probably into Judea for the replenishing of his funds : that for eighteen years he struggled against the reigning dynasty, and at length succeeded in their overthrow ; "placed himself" upon the throne, and reigned under the assumed name of Tiglath-pileser, his former and real name Pul (Porus or Pulu) appearing only in the Babylono-Assyrian
record, when late in his reign he assumed the personal functions of govemor of liabylonia for two years. Let the synoptic history of Hosea be interpreted as developed in the subsequent biblical detail, in the sense that, in the twenticth year of Jotham's official life or service, he conspired against Pekah, and, after a nine years' conflict, completed his purpose by the murder of Pckah, and, seizing the throne, reigned in his stead.

Begeing indulgence for this trespass upon your patience and attention.

I am respectfully and sincerely yours,
JOSEPH HORNER.

The next Meeting of the Society will be held at 37, Great Russell Street, Bloomsbury, W.C., on Tuesday, ist November, ISgS, at \(S\) p.m.

\section*{SOCIETY OF BIBLICAL ARCHEOLOGY PUBLICATIONS.}

In 8 Parts. Price 5s. each. The Fourth Part having been issued, the Price is now Raised to \(£ 5\) for the 8 Parts. Parts cannot be sold separately.

\section*{The Egyptian Book of the Dead.}

Complete Translation, Commentary, and Notes.
By the late Sir P. LE PAGE RENOUF, Knt. (President);

CONTAININ゙G ALSO

\section*{The Bronze Ornaments of the Palace Gates from Balawat.}

\author{
[Shalmaneser II, b.C. 859-825.] \\ To be completed in Five Parts.
}

Parts I, II, III, and IV have now been issued to Subscribers.
In accordance with the terms of the original prospectus the price for each part is now raised to \(£ \mathrm{r}\) ros. ; to Members of the Society (the original price) \(£^{1}\) is.

Price 7s. 6d. Only a Limited Number of Copies have been Printed.

\section*{THE PALESTINIAN SYRIAC VERSION OF THE HOLY SCRIPTURES.}

Four Recently Discovered Portions (together with verses from the Psalms and the Gospel of St. Luke). Edited, in Photographic Facsimile, from a Unique MS. in the British Museum, with a Transcription, Translation, Introduction, Vocabulary, and Notes, by

REV. G. MARGOLIOUTH, M.A.,
A ssistant in the Department of Oriental Printed Books and MISS. in the British Musetem; formerly Tyrwhitt Hebrew Scholar.

\section*{PROCEEDINGS}

OF

\section*{THE SOCIETY}

OF

\section*{BIBLICAL ARCHÆOLOGY.}

TWENTY-EIGHTH SESSION, 1898.

Sixth Meeting, ist November, iSgS.

Prof. A. H. SAYCE, LL.D., etc., President.
```

in the chair.

```

The President announced with regret the loss suffered by the Society, by the death of one of the most distinguished of its Honorary Members, Professor Georg Eeers. Born March ist, iS37. Died, August 7th, iS9S.

The following Presents were announced, and thanks ordered to be returned to the Donors :-

From the Author :-Richard Bennett, Esq. History of Corn Milling: Handstones; slade and Cattle Mills. London and Liverpool. 1898.

From R. A. Rye, Esq. :- Religion and Conscience in Ancient Egypt. By Flinders Petrie. London. 1898.
_Les Hypogées Royaux de Théles Par (i. Maspero. Revue de l'Histoire des Religions. 1 SSS.
___ sur l'Ennéade, bulletin critique de la religion égyptienne. Par G. Maspero. Rezue de l'Histoire des Religions. 1 Sg2.

Les Forgerons d'Horus. Par G. Maspero. L'Anthropologie. Juillet and Août. 1891.
—— Le Temple Égyptien. Par M. de Rochemonteix. Reãue Internat. de l'Enseignement. July, 1887.

From the Author:-G. Maspero. Extrait du Journal des Savants. April, 1897, Feb. et Mar., 1898 . Containing notices of the Petri Papyri, and Wills in Ancient Egypt by F. Ll. Griffith.

From the Author:-Prof. A. Wiedemann. La Stèle d'Israel et sa Valeur Historique. Bonn.
——_ Zwei ägyptischen Statuen des Museums zu Leiden. Orient. Litt-Zeit. 1 SgS. Svo.

From the Author:-Prof. Lefébure. I'Animal typhonien. Les noms Égyptiens des Principaux viscères. Sphinx, II, z. 1898. Svo. (2 pamphlets.)

From the Publishers:-B. (i. Teubner. I)ie Gewichte des Alterthums narh ihrem zusammenhange dargestellt. Von Friedrich Hultsch. No. 2. 1898 .

From the Author :-Rev. P. A. Cesare de Cara, S.J. Gli Hetheipelagi in Italia, Gli Itali della Storia. Enotri-Itali-Siculi.
-__ Siculi-Enotri-Itali.
_ Siculi-Sicani-Liguri-Oschi Morgeti.
——_ Opici-Ausoni-Aurunci-Aborigeni. Cīilta Cattotiaa. 1898. (4 Parts.)

The following Candidates were nominated for election at the next Meeting, to be held on the 6th December, iSg8.

Stanley Arthur Cook, B.A., 60, Rathcoole Avenue, Hornsey, N.
W. T. Granville Lewis, Talbot Chambers, Shrewsbury.

Rev. Colin Campbell, The Manse, Dundee.

A paper was read by the President, entitled, "Assyriological Notes, New Light on the Hittite Inscriptions."

Remarks were added by the Rev. Dr. Löwy, Mr. Thomas Tyler, Mr. S. A. Cook, Mr. J. Offord, Mr. Theo. G. Pinches Rev. J. Margoliouth, the Secretary, and the President.

\section*{ASSYRIOLOGICAL NOTES. No. 4.}

\author{
By Professor A. H. Sayce (President).
}
(I.) M. Chantre has just published an account of his Mission en Cappadoce in the years 1893 and 1894 , and a very important work it is. In fact it seems to me one of the most important works from an archæological point of view that have appeared for many years. The discoveries made at the two Hittite centres of Boghaz Keui and Euyuk have thrown new and unexpected light not only on the archrology of Asia Minor, but also on many of the problems connected with the early civilisations of Western Asia and Egypt. No trouble has been spared to make the volume as complete as possible, and the plates of inscriptions and other monuments with which it is enriched enable the archæologist to study the objects that have been found quite as effectually as if he were in the Musée Guimet in which they have been placed.

Among the objects disinterred by M. Chantre and his wife at Boghaz Keui are numerous fragments of cuneiform tablets. They are quite distinct from the Kappadocian cuneiform tablets of (iyül Tepé near Kaisarìyeh, of which specimens are given in the Proceedings of this Society for last November, and while some of them are in Semitic Assyrian, others are in an unknown language which we may presume was that of the district in which Boghaz Reui is situated. In other words it was the language of the country in which stood one of the chief Hittite cities, and where Hittite sculptures and inscriptions have been met with. We may conclude therefore that in these fragmentary cunciform texts we have at last lighted on the mysterious and long-sought language of the Hittite hicerostyphs.

A short study of the texts revealed to me a fact, the value of which can harelly be oxerestimated. Not only are the forms of the charaters used in them the same as those which we meet with in the letter of Tarkhundaraus of Arzawa, found at 'Tet el-Amarna and
transliterated by me in the Proceedings of this Society for November, 1897 (pp. \(281-284\) ), the language of the texts is the same as that of the letter from Arzawa. Thus the Boghaz Keui texts contain the word kid-da-an-si (Chantre, p. 54, No. 7, 4), which figures in the Arzawa letter, line 20 , where my transcription of the sign kid by \(u\) (?) must be corrected, the Boghaz Keui inscriptions showing that it is the Assyrian character kid. The character which I have read kid or Kit must consequently be regarded as representing the syllable kat, the Assyrian sign with which it corresponds having both phonetic values (kit and kat).

The discovery that the language of Arzawa and that of Boghaz Keui were the same, and that the same form of cuneiform script was used in each, throws a flood of light on the Hittite question. To me it is particularly gratifying, since as far back as 1889, when I published the first transcripts and translations of the Tel el-Amarna tablets in the Proceedings of this Society (June, 1889), I said of the language of the letter from Arzawa that "I suspect (it) to be a Hittite dialect," and pointed out that the name of the Hittites occurs in it. Since then I)r. Winckler has shown that another, but unfortunately much mutilated, letter from 'Tel el-Amarna, which is in the same language, and is now preserved at Berlin, contains the words \(K / 2 a-a t-t a-\mu a-a s\) sarru-us, which must signify "the king of the Hittites" (Ihittheilungen aus den orientalischen Sammlungen: Der Thontafelfund zon el-Amarna III, No. 238, line 15).

Now I have discovered the same ethnic title, Khatâna or "Hittite," in one of the Boghaz Keui texts copied by Dr. Scheil. Here it is written Khla-ta-a-na-(ta), where the final ta may be either a suffix or belong to the next word (Chantre, p. 60, line 3).* All this justifies me in concluding that I was right when in those longpast days, when I had not as yet become a "reteran," and the younger Assyriologists and "Hittologists" of to-day were still at school, I laid down in my Memoir on the Momuments of the Hittites (1) that Boghaz Keui was a Hittite capital, and (2) that the name
* Khationa-ta is followed by a-la (not a-ma) Shal-lim. Khallim is also found in Chantre II, r. 5 (p. 49), and aba I would explain by aba-kles, the tille of the High-priest at Komana, which I have long since analysed into aba-kal̂, "the chief of the galli-priess." In another text communicated by Dr. Scheil (II, 5, Chantre, p. 61) we have Kha-ta-an, which may be "Itittite," while in the list of cities (Chantre I, I4, p. 47) one of the names is Kha-at-tu-si-pa, with which the name of the king Khattu-sar must be compared.
"Hittite" was that by which the nation or race which inhabited it was known both abroad and at home.

Whether Arzawa were the native name of Boghaz Keui has yet to be learned. The name reminds us of that of Ouarsapa in Armenia Minor mentioned by Ptolemy. But in any case the inhabitants of Arzawa and Boghaz Keui must have belonged to the same race, or at all events have spoken the same language, and were probably subjects of the same king.

The similarity in the forms of the cuneiform characters and the words they embody in the Arzawa and loghaz Keui texts imply that the latter belong to the Tel el-Amarna age or about 1400 e.c. We thus have a chronological starting point for the objects found at Boghaz Keui as well as an explanation of the Egyptian influence upon Hittite art visible, for example, in the sphinxes of Euyuk. What relation existed at the time between the Hittites of Boghaz Keui and Arzawa on the one side and the Hittites of Syria whose king Sapalulme wrote to the Egyptian Pharaoh in the Babylonian language, as Dr. Knudtzon has discovered, is a question which cannot be answered at present.

But one thing is clear. Solid ground has at last been reached from which to attack the still undeciphered Hittite hieroglyphs. A comparison of the suffixes used in the hieroglyphic and cuneiform texts will enable us to determine the phonetic values of some at least of the Hittite characters and to break up the inscriptions into their grammatical parts; the reading, moreover, of the words of the Hittite vocabulary is given us by the cuneiform texts. One of these may be mentioned here. A Boghaz Keui text copicd by Dr. Scheil contains the mutilated line . . arsi ya-an-si-an la-li ... In the Arzawa letter uzen-dansi (" he asks"), uzeansi and kiddansi ("an embassy") are found in the sense of "requesting" or "sending a mission," but it is more probable that the yansi of Boghaz Keui has nothing to do with them, and that its explanation is to be sought etsewhere. Prof. Delitzsch in his Sprache der Kossï̈r (pp. 29-35) has shown that the Kassite word yansi " king" was known, not only among the Kassites and the people of Namri, but also in Khupuskia on the frontiers of Ararat. I have long suspected that like the name of Tessub or Teisbas, the Air-god, it had a still further extension towards the west. We find it, I believe, in the name of the Cappadocian city of Nazianzos, which is compounded with the same nazi as meets us in the names of Tarkhu-nazi king of

Malatiyeh, in the reign of Sargon, and of the city of Tarma-nazi in the land of the Patinâ (or rather Khattinâ) on the Gulf of Antioch. The broken line of the Boghaz Keui text I would therefore translate ". . . arsi the king." Perhaps the mutilated name is Alud-khukharsi, which is found in one of the Cappadocian tablets communicated by Dr. Scheil (Chantre, p. 95). Lali in the Arzawa letter signifies "I sent," and appears in the Berlin tablet under the form of lauli. A list of Cappadocian cities discovered at Boghaz Keui contains the words amelu gis pa lali which may mean "the scribe I sent" (Chantre, p. 47, line 15 ).*
(II.) This same list of cities has, in the line preceding that which I have just quoted, the words bit an sarru-us alu A-ri-in-na-aś alu Kha-at-tu-si-pa, "the temple of the deified king" (or "the Beth-el of the king) of the city of Arinna, the city of Khattusipa." Arinna seems to be the Aremna of the Treaty between Ramses II and the Hittites, an image of whose Sun-god is stated to have been engraved in the centre of the seal which accompanied the Hittite version of the treaty. Khattu-sipa, like the name of the king Khatti-sar, is evidently compounded with that of the supreme "Hittite" god; the second element sipa may perhaps be compared with the first element in the name of Sapa-lulme. The list must have been drawn up for purposes of taxation, as at the end of the first catalogue of cities we have the ideograph of "com " or "seed" repeated steven times. After the name of each city comes the suffix or postposition -il (which also occurs in the Arzawa letter, line \(1_{3}\) ), and must signify "from," while the catalogue concludes with the ideographs QA NER, " 600 ephahs." Consequently the sense of the whole text will be: "From such and such cities 600 ephahs of corn-seed."
(III.) Various attempts have been made to explain the origin of the Babylonian form of the Assyrian character cll en, but without success. No one seems to have noticed that the mystery is cleared up by a votive limestone tablet of Ur-Enlil given in

\footnotetext{
* The whole line reads kur amelu gis-pa lidilior-ri hi-is-ta an as-sur-a-i. Zirri is found in the Arzawa letter (l. 32) in the word sir-ri-li-yac-as-sa, and kis-ta may be connested with kissa-rissi, which must signify " by means of," or something similar in the same letter (1.27). We get the termination ai in the word khat-khatrai (W. and A. 23S. 13), which follows the preposition EGIR, "afier." Kis-ta AN As-SUR- \(\alpha-i\), therefore, seems to mean, "hy the hand of an Assyrian."
}
fascimile by Hilprecht, The Babylonian Expedition of the University of Pinnsyladaia, I, a, plate XVI, No. 37, where the \(c n\) in the name of Ur-Enlil is represented by the picture of an arm and clenched hand holding an instrument of this shape \(\smile\). 'The character must originally have denoted "power," and have resembled the Egyptian hieroglyph nekht. Simiarly the origin of the character Fiy "a hand" is shown to have been the picture of an arm and clenched hand in which is held cither a fringe of leather, or more probably the outstretched fingers of another hand.
(IV.) Dr. Lehmann's recent work, Zwei Hauptprobieme der altorientalischen Chronologie uid ihre Lësuns, has directed my atten tion once more to the subject of the Babylonian chronology as understood by the native historians and more especially the compiler of the Dynastic Tablet, first made known by Mr. Pinches in the Procedings of this Society, 1SS4, pp. 193-220. Dr. Lehmann's publication of this tablet is the latest, and his examination of the dates contained in it may be considered final.

Two important corrections it seems must be made in the reading of the numerical ciphers as first announced. The 4 th dynasty, that of \(I \sin\), lasted \(132 \frac{1}{2}\) years and not \(62 \frac{1}{2}\), and the number which precedes the ideograph pal or "dynasty" after the dynasty of Nabonassar is 22 and not 31 .
1)r. Lehmann, however, has followed his predecessors in misunderstanding what the last-mentioned date really means. pal signifies "dynasty," not "kings" or "years," and the correct translation of the line is " 22 dynasties at Babylon." That is to say, the compiler of the tablet believed that 22 dynasties had reigned at Babylon since the Flood-or possibly since the time of Aloros, the first antediluvian king-down to the period when a new era began. This cra was known to the astronomers as that of Nabonassar ; to the compiler of the tablet, however, it more probably meant the period when the government of Babylonia passed out of the hands of the native Babylonians into those of the Assyrians. Kin-ziru of Sapì is counted by him along with Pulu or Tiglath-pilesser III of Assyria; with Nebo-sum-yukin, the grandson of Nabonassar, the old order of things had come to an end. The 22 dynasties were probably enumerated on the tablet of which (ieorge Smith published a fragment in the Transuctions of this Society, III, a, pp. 361-379.

There are several synchronisms between Assyrian and Babylonian history, especially during the period of the Kassite dynasty, but it
has hitherto been diffieult to reconcile them with the statements of the Dynastic Tablet. This is mainly due to the fractures of the latter, which have caused lacunæ in the list of kings. But it is also due to the fact that the name of one of the kings of the Kassite dynasty has been misread.

This is the name of the 26 th king, which has hitherto been supposed to be Gisammeti. Mr. Pinches, however, has pointed out to me that this is a mistake and that the true reading is Ku-dhur-[Bel]. Now according to Nabonidos (IW.A.I., V, 64, 27-30) Sagarakti-buryas the son of Kudur-Bel had worked at the temple of the Sun-god in Sippara 800 years before his own restoration of it and consequently about I 345 E.c. As the Dynastic Tablet makes Sagarak[ti-bury]as the successor of Kudur-Bel, it is evident that Nabonidos believed the 27 th Kassite king to have reigned about b.c. \(\mathrm{I}_{3}+\mathrm{f}\), and consequently that the Kassite dynasty came to an end So years after the end of his reign of 13 years, or about 1260 b.c.

On the other hand, Sennacherib tells us that when he captured Babylon he recovered a seal which commemorated the conquest of that city by the Assyrian king Tiglath-Bir 600 years previously. Seven years later the Assyrians were driven out of the country and Babylonia recovered its independence under Rimmon-sum-uzur the 3 ISt of the Kassite kings. Between the death of Sagarakti-buryas and the accession of Rimmon-sum-uzur the Dynastic Tablet places an interval of only \({ }^{1} 7\) years, and since Sennacherib's conquest of Babylon took place in e.c. 689, we should have for the death of Kudur-Bel b.C. \({ }^{13} 19\) ( ( 1 1320) instead of about b.c. I \(_{3}+5\).

The dates given by both Nabonidos and Sennacherib are, however, in round numbers, and therefore must not be pressed too closely. It is different with the date given by Sennacherib in the rock-inscription of Bavian for the capture of the images of the gods Rimmon and Sala in the reign of the Assyrian king Tighath-pileser, by Merodach-nadin-akhê king of Babylonia. This is 4 I S years before the date of the Bavian inscription, or ino6 e.c. Merodach-nadin-akhê, it has long been recognised, must have been one of the I I kings of the dynasty of Isin, which followed that of the Kassites, and of which only three names have been preserved-not very per-fectly-in the Dynastic Tablet. If Kudur-Bel died in b.c. I 320 , the accession of the dynasty of Isin which happened 92 years later would have taken place in B.C. 122 S , and the dynasty would have come to an end in b.c. 1096 or 10 years after the date assigned to Merodach-
nadin-akhê. The dates given by Semacherib are therefore consistent with one another, but they cannot be harmonised with the round number of Soo years given by Nabonidos, as this would assign the end of the dynasty of Isin to about b.c. in 3 o. Nor can it be very easily harmonised with the Dynastic Tablet, since the king who would have been reigning in b.C. iro6, supposing the dynasty to have ended in m.c. rog6, seems to have been Merodach-sapik-zermati, though it is true that only the first element in his name-Merodach-can be read with certainty.*

Provisionally, however, we may accept b.c. 1228 as the date of the fall of the Kassite dynasty, always remembering that it may be from 15 to 20 jears too high. This would give us m.c. iSo5 as the date of the accession of the Kassite dynasty, and r.c. \(2365^{-}\) 2310 for the reign of Khammurabi, according to the Dynastic Tablet. As Nabonidos states that one of the Kassite kings, Burna-buryas by name, reigned 700 years after Khammurabi, we should have b.c. 1650 as the date of his reign. But this will not suit the Burna-buryas who corresponded with Amenophis IV of Egypt about b.c. i 400 , and there must consequently have been an earlier king of the same name. Unfortunately the names of about half the Kassite kings have been lost in the Dynastic Tablet, so that neither Burna-buryas is preserved in it.

If we foilow the chronology of the Dynastic Tablet it will have been towards the end of the reign of Samsu-iluna, the son and successor of Khammurabi, that the Elamite king Kudur-nankhundi made the raid into Babylonia, in the course of which, according to Assur-bani-pal, he carried away from Erech the image of the goddess Nana which was recovered by Assur-bani-pal 1635 years afterwards. It has usually been assumed that an Elamite conquest of Babylonia is here referred to. This, however, is by no means necessarily the

\footnotetext{
* The "Synchronous Listory" makes Merodach-sapik-zer-mati the contemperary of Assur-lel-kala, and adds that he was mundered ly Rimmon-haladan, wh, seizel the throne and married his daughter to the Assyrian king. The Dymastic Tablet, bowever, takes no notice of kimmon-latadan, and, as 1 have pintel out in the Procedines of this tocicty for February, i897, Merodach-nadinakhe, and not Merodach-sapik-zer-mati, seems to have been the immediate predecenom of Nabenarlin (the Nabonnadus of Bernssus), the last king of the dymasty of Isin. It is probable, therefore, either that Merodach-sapik-zer-mati and Kimmon-hadatan were illegitimate sotereigns who are omittel by the compiter of the taldet, or that the Asour-lee-kala who had dealings with them was not the son of Tighth-pileser I of that mame, hut a later Assyrian king.
}
case. In fact had it been so, we should have heard of the capture of Babylon, which was at the time the capital of the country. The Elamites not unfrequently made raids into Babylonian territory, surprising and plundering some of its towns, and the carrying off of the image of Nana was similar to the carrying off of the images of Rimmon and Sala by Merodoch-nadin-akhê. It implied nothing more than a single raid.

It must, however, be remembered that we cannot trust implicitly the dates given by the compiler of the Dynastic Tablet. A text recently published by the Trustees of the British Museum throws doubt on the accuracy of the regnal years he ascribes to the kings of the Ist dynasty of Babylon (that of Khammurabi). The text consists of chronological tables drawn up in the reign of Ammizadok, the fourth successor of Khammurabi, and as the tables record the events of each year, their testimony is unimpeachable. Now between the Dynastic Tablet and the newly-found annals there are serious discrepancies. In the annals Sumu-abi, the founder of the dynasty, is made to reign \(4+\) years instead of 15 ; his successor, Sumu-la-ilu, 36 years instead of 35 ; Sin-muballidh, the father of Khammurabi, 20 years instead of 30 ; Khammurabi himself 43 years instead of 55 ; and his son Samsu-iluna 38 years instead of 35 . A possible explanation of the discrepancies mas be found in the supposition that the compiler of the Dynastic Tablet has included in the reigns of those whom he regarded as legitimate kings the reigns of princes like Pungun-ilu, Immerum the son of Lilium, and Eri-Aku or Arioch, of whom we hear in the contract-tablets, and whom he regarded as illegitimate; he has certainly done so in the case of the Kassite dynasty, where the seven years' reign of the Assyrian conqueror Tukulti-Bir is included in the 30 years' reign of Rimmon-sumuzur. 'This, however, will not explain the 38 years' reign of Samsuiluna in place of the 35 assigned to him in the Dynastic Tablet.
(III.) Among the fragments of tablets from the library of Nineveh which are now in the British Museum, there is one. K 454 I , to which I drew attention in the Academy some years ago. Dr. Bezold has published the greater part of the third column contained in it in his Catalogue of the Kouyunjik Collection, p. 640. though his copy needs correction in one or two places. I give here for the first time a complete copy of all that is left of the text. As will be seen, this consists of the ends of the lines in the second column, and a considerable portion of the third column.

The following is a transliteration and translation of the text so far as it has been preserved :-
```

Obz. Col. II. . . . . ju-tar
. . . . he restores
. . [Sir-] bur-la-kı

        do not cease.

Who "the former king" of Babylon was whose unfortunate reign is the subject of the text we have no means of guessing. But he must have been one of the early rulers of the country. Assyria was not yet a kingdom ; it was still governed by a "prince" and not by a "king." It is, moreover, conjoined with Śuri or Mesopotamia. This takes us back to an early period when the Babylonians included Assyria in Śsuri, or at all events regarded it as the district around the old city of Assur on the west bank of the Euphrates, and therefore within the bounds of the land of Suri. The "prince" of Assur was
nominally a vassal of Babylonia which claimed suzerainty over the whole of Mesopotamia.

According to the text Babylonia itself had fallen into such a condition of distress and famine, that its king sent his property northward to the "prince of Assyria" and deposited it in Assur and the land of suri. Perhaps this is but an euphemistic way of expressing the fact that Assyria had revolted from Babylonia and that its ruler, taking advantage of the famine in the latter country had invaded Chaldæa, had captured Babylon and carried away the spoil of the royal palace. However this may be, the description of the state of Babylonia is given in language which is identical with that used in the astrological tablets which were compiled in the time of Sargon of Akkad. The question therefore arises, whether our text in its original form does not go back to the same period? The mention of the Babylonian cities of Lagas, Nippur and Isin in the second column would support this view. On the other hand the astrological tablets know nothing of Assyria; the city of Assur in fact does not seem to have been founded at the time they were composed, while Babylon was not as yet the ruling city of Chaldæa. The last objection, however, may be met by the fact that after the rise of Babylon to imperial power under the dynasty to which Khammurabi belonged, the court scribes and historians endeavoured to prove that it had always been the chief city of the country, and that even the first of the antediluvian kings had been a native of it.

On the whole, then, I am inclined to believe that the king whose disastrous reign is here described was one of those who succeeded Sargon of Akkad and his son Naram-Sin, and that the overthrow of the empire of Sargon in Mesopotamia is referred to. The story, however, has been modified in accordance with the dictates of Babylonian national vanily, and its inclusion in the library of Nineveh was a result of the mention made in it of Assyria. The substitution of mat Assur-k1, "the land of Assyria," for an original Assur-ki, "city of Assur," may be due to the Assyrian copyist.
(IV.). In the contract-tablets we meet with names compounded
 hitherto uncurtain. The question is settled, however, by a contract dated in the reign of Abil-Sin, the grandfather of Khammurabi, which has been translated by Peiser, Keilschirfthiche Bibliothek. IV, 1. 15. Here one of the witnesses is "Ikibum (or Jacob) the son
of A-bi-kha-ar." Abi-Khar is a parallel formation to names like Abijah in Hebrew or Albi-Samas in Babylonian, and signifies "my father is Khar." Khar, therefore, was a deity known to the Babylonian pantheon, and \(\sim \boldsymbol{l}\) must be read Khar or Khur. The name is identical with that of the Egyptian god Horus, and was, I believe, borrowed from Egypt. That Egyptian deities were adopted by the early Babylonians we know from a seal-cylinder published by Dr. Scheil, on which is the name of the god Anupum or Anubis.

V . The true pronunciation of the name of the Assyrian god who is generally known as Nin-ip is still doubtful. I showed long ago that the reading Adar proposed for it by some of the German Assyriologists was impossible, and my own suggestion that it should be read Uras has met with no better fate. Now, however, I believe that I have at last found a key to the reading of the name. In the Assyrian texts it is often represented by the character \(\neq\), which has the values of bar and mas, and in the early days of cuneiform decipherment Sir Henry Rawlinson accordinly transcribed it as Bar. To this it was objected that the character when expressing the name of the god was probably used ideographically, and that consequently its phonetic value could afford no clue to the true pronunciation of the name. But after all, I think I can now show that Sir Henry Rawlinson's reading was not very far wrong. I have found in certain inscriptions the name of a god which is written Be-ir, i.e. Bêr, and who is associated with the greater deities of the Assyrian pantheon. Thus in a letter of Assur-yukin published by Harper: Assyrian and Babylonian Letters, IV, p. 458, the writer says: "May Assur, Samas, Bel, Nebo, Nergal, Laz, Isum, Rimmon, and Bêr, the great gods of heaven and earth, nine times over to the king my lord, to the son of the king of Assyria and to the son of the king of Babylon for ever and ever be favourable!" It does not seem likely that so important a god as "Nin-ip" should have been omitted in this enumeration of "the great gods," more especially as Nebo is coupled with Bel-Merodach and Laz with Nergal, and I am therefore inclined to believe that he is designated under the name of Bêr-a name which, it must be remembered, is not otherwise found among those of "the great gods." If the name was Bêr, we should have an explanation of the fact that the Assyrian scribes represented it by the character which had the phonetic value of Bar and the ideographic
signification of "brightness." That the god was also called Nin-ip is not excluded by the fact that his ordinary name was Ber, and as I pointed out some years ago, the Creek inscriptions of Cilicia indicate that such was the case. In those we have the proper name Nué \(\gamma\) (at Jatapa) by the side of other names like Níres (at Jatapa) and Nara (at Jatapa) which have been borrowed from the names of Assyrian deities. Nana or Nanas is a female name, derived from the Assyrian Nana, like Náry (at Hamaxia) and Naיpoós (at Jatapa). Another Cilician name of similar origin is \(\mathbf{N e r}^{\prime} \boldsymbol{a}^{\prime} \boldsymbol{\prime}\) s, the Assyrian Nannaru, which is found in an inscription from Hamaxia.

The plates for this paper will be issued with the December part of the Proceedings.

\section*{HITTITE INSCRIPTIONS,}

\author{
By W. H. Rylanus.
}

The President having referred to the possibility of dividing the words in the so-called Hittite language, it seemed to me that perhaps some assistance might be given by the diagram now submitted to the Society, prepared by myself some years ago. Of course, one of the first difficulties, in fact the greatest difficulty in the decipherment of an unknown language written continuously, is the separation of the characters into words. Of the many silly things that have been written and spoken about these inscriptions, few are sillier than the idea of depreciating the vaiue of the Hamath Inscriptions on account of the late period at which they were carved. We must never forget the lateness of the Rosetta Stone, which has given us the key to the oldest Egyptian hieroglyphics. In my opinion, when it becomes possible to read with certainty the whole of the "Hittite" inscriptions, but few, if any of them, will be found to be of the great age which has been claimed for some of them.

It appears to have been assumed that because they are found to contain picture characters, more or less alike, that, therefore, al\} the inscriptions are composed in the same language. The wide separation of the districts in which they have been found suggests the idea that this is improbable, or at least, may not be the case. The same form of picture writing was evidently used over a large portion of the country, but it does not follow that the same language was at the same time employed in all the inscriptions, just as was the case with the cuneiform writing.

The value of the stones from Hamath appears to me to be, whatever their age may be, that we have a series of inscriptions from one place, and, therefore, almost certainly in one language. A series, which when arranged as they are in my diagram, make several points quite clear. In it I have disturbed the boustrophedon manner in which the lines are arranged in the originals, and so placed the lines that the characters may be read continuously from right to left. I have also placed similar characters in a vertical line, their position on the original stones not being disturbed. Those characters which occur in the same position in the different
inscriptions are made black; those which occur within the same group of hieroglyphics are crossed with diagonal lines, and those which occur only in one text are left white. From this arrangement it becomes clear that H. \(1,2,3\), contain much of the same text, commencing with a rerular formula, which is a little changed in H. 4. It also seems probable that the blank in H. i, which includes a portion of this formula, shows that a part of the inscription is wanting; this is, perhaps, made more likely by the fact that the last character in the first line is incomplete, like the half-formed hieroglyphic at the end of the third line. These blanks occur at the ends of the lines of the inscription where no dividing line is found. The blank may, however, be explained by the supposition that some part of the usual titles of the king have been omitted, including the two plume-like caps; the single head-dress being sufficient. If this should prove to be the case, some assistance would be obtained towards the division of the words.
H. 2 and H. 3 are complete. In H. 2, the last line ends half way across the stone, the remainder of the stone being entirely uncut. In H. 3, the dividing bar at the end of the second line is clear, and a large portion of the stone below is untouched.

The characters inserted in the regular formula, it will be noticed, occupy the same position in the three first inscriptions, and are evidently additions to the main text: it seems almost impossible to suppose that these additions are other than the names of persons, things, or countries, names in fact in one form or other: in my opinion they are the names of persons and probably also countries. I cannot believe that these inscriptions, contain anything except some matter of an historical character, probably recording conquests : or some glorification of the king. It is impossible to believe that all the labour was taken to record gardening operations or anything equally simple.

It seems natural also to suppose that the first three inscriptions record something connected with one king, whose name lies hidden in the first part of the formula, probably before the two plumed caps at the end of the first lines of the stones: and it is worth noticing that this is the place in which an alteration in some of the characters is made in II. .f. 'The alteration in the position of some of the hieroglyphs only, suggests that the last inscription may refer to a king whose name bore a resemblance in part to the name of the king referred to in II. s, 2, and 3 .

It will be noticed also that a group of characters which occurs immediately after the opening word of the three first inscriptions is omitted in H. 4, after which the formula runs on the same in all, for one or two groups ; this, with other points, might assist in the division of the lines into words: a matter too long to enter into at the present time. One thing seems, however, quite clear. Any system of interpretation which does not take into consideration the points made clear by the diagram, and does not reckon for all the characters found in the inscriptions, must be of no value whatever.

Mr. Offord having called my attention to an inscription, and very kindly obtained for me a sketch of a very interesting figure belonging to this class of antiquity, it may be well to add them in this place. As it happened in my own case, they may have escaped the notice of some of the Members.

The inscription has already appeared with notes by M . Menant in the Bulletin of the French Academy (T. xx, p. 329). The stone upon which it is cut in relief measures \(0^{\text {m. }} 20\) by \(0^{\text {m. }} 40\). A squeeze of it was sent by M. Alric, dragoman of the French Embassy at Constantinople, to M. Menant, who thus describes it. The original was discovered in the neighbourhood of Angora, or Balatia: two human figures face
 one another, in profile, and between them is a table with legs forming an X ending in divided hoofs, the table being loaded with a double pile of offerings. The figures are of the same type and in the same dress as those found at Sinjelli. (Perot, Hist. de l'Art, ii, p. 534.) They are beardless, the eyes coarsely cut in the middle of the cheek; the hair thrown back and held by a fillet, fails in curls on the neck. They are both clothed in long robes without folds, ornamented at the bottom with a deep fringe. Lastly, they wear boots with turned up toes.

The figure on the left is seated, resting his foot on a footstool, on a chair with a slightly raised back, in the form of an X , the feet ending in lion's paws ; he raises a cup to his lips with his left hand,
his right hand being drawn back and grasping the "crooked" staff like that found at Eyuk and Boghaz-Keui.

The figure facing him is standing, and holds in his raised rigit hand some object, it may be a fruit (?), while in his left, beld close to his waist he bears a symbol, except that it is reversed very similar to that held by the figure on the monument from Biredjik, now in the British Nuseum.

The Biredjik monument mentioned by M. Menant will be found figured in our Transactions (vol. vii, p. 250) ; it has seemed to me not unlikely that the object held in the hand of the figure is intended for a sceptre, baton, or club, probably an emblem of power, therefore, when reversed, it might signify submission.
"The whole composition," writes M. Menant, "brings to mind a bas-relief from Marash, rublished if Humann and P'uchstein " (Reisen in Kleinasien, pl. xlv, No. 2, and xlix).
'The above is only a short abstract of M. Menant's interesting notice: he then discusses the characters of the inscription, expressing the opinion that notwithstanding the want of knowledge as to the exact translation of the text, the general sense is the commemoration of an offering or an invocation to the god Sandu. He then offers some remarks in defence of the term Hittite, so often applied to these monuments ; at the same time he points out that Puchstein objects to it, and has given the name syro-asiatique to those found at Sinjerli.

It seems to me that "Hittite" is nothing more than a good general title until we learn a better one, and that it is only slightly more correct than Hamathite.

Annexed are two views of the small golden figure, the same
 size as the original. It was also published by M. Menant in the Bulletin of the French Academy (vol. xxiii, p. 588). This beautiful and very characteristic figure was bought by M. Emest Chantre from a jeweller at Yuzgat, he having obtained it from an Armenian of Cesarea, who bought it from a peasant. M. Chantre obtained it during his mission in Cappadocia.
MI. Menant considers that it is most likely the representation of a god, and the sketch, which unmistakably shows the characteristics of the original, makes clear the condition of art when it was made.

ANIHENI F\&YPTIAN TOLLEI-BON.
In the Collection of Walter L. Nath, Eal., F.......

AN ANCIENT EGYPTIAN TOILET-BOX BELONGING TO W. L. NASH, F.S.A., WITH AN ANALYSIS OF ITS CONTENTS BY W. GOWL.AND, F.C.S., F.S.A.

This toilet-box is made of a hard, brown-coloured wood, probably "Sont" wood, and is semi-cylindrical in shape. It has a sliding lid, which runs in grooves in the sides of the box. It measures \(5 \frac{3}{4}\) inches in length, \(2 \frac{3}{4}\) inches in breadth, and \(1 \frac{1}{2}\) inches in depth. The interior is divided into five compartments, each containing an ointment, or rather, as Mr. Gowland says, a cosmetic. The ornamentation and the general appearance of the box are sufficiently shown by the accompanying illustration. A rery similar box is figured in Wilkinson's "Ancient Egyptians." But the chief interest lies, not in the box, but in its contents.

So far as I know, no complete analỵis of an ancient Egyptian ointment has hitherto been published. I am told that Dr. Petrie gave an analysis of the fatty matter contained in jars he found in the "new race" tombs near Nagada, but I cannot find the reference. In Wilkinson's "Ancient Egyptians," rol. ii (new edition), p. for, footnoti, is some account of Dr. Ure's examination of an ointment contained in a vase in the Alnwick Castle collection, but it can hardly be called an analysis.

Mr. Gowland's examination of the contents of this toilet-box is therefore specially interesting, as being a full analysis made by a competent chemist.
W.ALTEER L. NASH.

> ANALYSIS BY W. GOWlAND, F.C.S., F.S.A.

The materials, which resemble in appearance a hard ointment or plaster, are contained in an ornamental wooden box, divided into five compartments as shown in the diagram. With
 the exception of the material in compartment \(D\), which is much decomposed and conserted into a pulverulent mass, they are all very similar to one another, having the following characters: They are brown in colour, and of a rather hard consistencenearly as hard as wax-and break with a dull, waxy fracture. They melt easily when heated, and when ignited burn with an aromatic, resinous odour, and a smoky flame. When rubbed on paper they give a waxy mark, not a greasy stain.

The material in A was specially examined, as it had apparently undergone less change than those in the other compartments. The results are as follows:-
\begin{tabular}{|c|c|c|}
\hline Tatter soluble in boiling alcohol ( 40.3 per cent. of which separated in cooling) & \multicolumn{2}{|l|}{\(9+25\) per cent} \\
\hline Residue insoluble in boiling alcohol & 575 & , \\
\hline Resinous matter soluble in cold alcoho & 56. & " \\
\hline As & & \\
\hline
\end{tabular}

The amount of ash found is probably slightly greater than that actually present, as it was impossible to separate perfectly the earthy matter with which the material was covered.

The ash consists chiefly of calcium carbonate and phosphate, with sodium and potassium carbonates, silica, iron oxide, and alumina, all practically inert substances. No other metallic compounds were present.

The materials in the compartments \(B C\) and \(E\) were only qualitatively examined, but they were not found to differ much from \(A\), and the anh of all had the same composition. The material in D differs, however, from all, in containing less wax and resin. lut not in its ash. The deficiency in the former may be due to excessive decomposition. Originally all very probably contained
a small quantity of some fixed vegetable oil to give them a suitable consistence, but this has been converted by age into fatty acids, and cannot now be identified.

The results of the above examination indicate that they consist of mixtures of bees'-wax and aromatic resins with a small proportion of a vegetable oil ; owing, however, to the changes which time has produced in their physical and chemical characters, it is impossible to say what resins or what oil was used in compounding them. Originally they were doubtless all perfumed, each with a different aromatic resin or essential oil, and this perhaps was the chief, probably the sole, difference between them. From their nature as revealed by the above examination, I think they were not intended for use as ordinary ointments, but as "cosmetiques" for stiffening portions of the hair, so that these might retain the curled or twisted forms given to them at the toilet. Or, it may be, they formed part of a doctor's visiting equipment for use as external dressings, notas ointments, but spread on linen and leather as plasters. The large quantity of wax which they contain precludes their use as incense.

\section*{A COPTIC "LETTER OF ORDERS."}

\author{
By W. E. Crum.
}

The mannscript here published was bought of a Cairo dealer last winter. It consists of a strip of stout, yellow-brown, oriental paper, \(21 \frac{1}{2} \mathrm{in}\). long by \(7 \frac{1}{2} \mathrm{in}\). wide. Above the text is a slender cross, about \(3 \frac{1}{2} \mathrm{im}\). high, in red, yellow, and black, on either side of which are a rosette and two fantastic birds in the same colours. In the four angles of the cross are the words \(\bar{I} \overline{H C} \Pi \overline{X^{C}} \bar{\Pi} \bar{K} \bar{Z}\) ( wiku). Below these is a horizontal line of small interlacing crosses similarly coloured. In the side margin of the text is one and in the lower margin are two lirds, drawn and coloured like the rest. The script of the Coptic text, from l. 9 onwards, is that usual in the 14 th century (cf. Hyvernat, Allum LIII, 1 and 2), while ll. 2-4, 6-8 show the large, archaistic hand frequently used at the period for the initial lines of a text. Line 1 is in quite small characters ; 1. 5 in less small. The second at least of these appears to have been inserted after the rest of the text was written. The script of the Aralnic sersion is tolerably regular. The letters generally have the points but are often not fully formed.

The text itself is a medieral example of a Coptic "Letter of Orders," the testimonial to ordination received by every cleric from the hishon, by whom he has been ordainel.* It consists, in the present instance, of (1) a protocol, (2) the bishop's declaration of the completed ordination, with its date and the church to which the ordained is appointed, (3) the further declaration that the ordained is competent to officiate, ( \(t\) ) an invocation of God's blessing upon him, (5) the definition of his rank among his fellows.

\footnotetext{
The only smilar documents that I have found in the Catalogues are Paris, forio. No. 316, from the latriarch io a dacon, and ib., Nos. 317-319, and Bentl., Cith. II, 475, from l'atiarchs to churchwardens. Our text is considerably wder than any of these.
}

Such a document is in Egypt called a Takitid.* It corresponds in the Latin church to the Littera Testimonialis ; \(\dagger\) but it is difficult. to ascertain by which term it is exactly represented among the Greeks. According to one canonist it would appear to be contained in the ovaratari wapi, where it is combined with the recommendation of the ordained when abroad to the clergy of another diocese. \({ }_{+}^{+}\)The Greek rituals mention, in each ordination, the paper ( \(\chi^{\prime} \boldsymbol{\sim} \tau \boldsymbol{}\) ) handed to the bishop by the registrar or archdeacon, and containing the preliminary declaration of the candidate's fitness, etc. ; but no reference is made to the Letter of Orders, the reason presumably being that this is granted only after the orders have been conferred and the service ended, and that it therefore forms no integral part of the ritual.s

The words of \(11.6-19\) are, it will be noticed, almost a repetition of those already pronounced in the service by archdeacon and bishop, and found thus in MSS. Brit. Mus. Or. 1323, fol. \(21^{\text {a }}\), and Curson 144:-

 птє пілe en

Both Coptic and Arabic are here printed as they stand in the Mラ., a few points, vowels, etc., only being added in the latter.

\footnotetext{
* تقلىA. Vansleb (Histoire, 163 ) uses this term with reference only to the consecration of the l'atriarch. To-day, at any rate, it is applied equally to the documents received by the inferior orders and even by lay officers, e.s., the or churchwarden (v. Bodl., Cat. II, 4 Si n note). Cf. also Kenaudet, Hist., \(48 \mathrm{~S} ._{\text {. }}\)
+ Ferraris, Prompta Bibliotheca (erl. 1844) VII, 470, Litt. testim. "fidem faciunt de susceptis ordinibus et carentia impedimenti canonici quod clericos a celebratione divinorum removeat."
\(\ddagger\) Balsamon in Chalced. XI (Migne, P.G., I 37,425 ) : \(\tau\). also Chalced. XIII (ib., 437). But Zonaras (ll.) had held the \(\sigma v \sigma \tau . \gamma \rho\). to tee one merely exonerating its bearer from an accusation. Renaudot, ll. and Lit. Or. Coli'. I, 460 ff., terms a document similar in intention to ours Systatica.
§ Since writing this I learnt from the Rev. Archimandrite A. Paraschis that the Greek church uses the term èvтàт \(\dot{\rho} \iota \boldsymbol{\nu} \boldsymbol{\gamma} \rho a \dot{\mu} \mu a\). It must be noted that this scarcely agrees with the Euchologion, cd. Goar, 300. The ovatatıò in that work, 395 , comes perhaps nearest among printed formulie to our document.
\|f Cf. Denzinger, Rit. Or., II, 8, 9. Hatch, in Dict. Chr. Ant., 1507, remarks that such a formula is found now only in the Eastern churches. It bears some resemblance to the \(\pi \rho o ́ k \lambda \eta \sigma t s\) in the Greek Pontifical (ed. Habert, 570 ).

\section*{LEAODE DES HÉBREUX.}

Par J. Lieblein.
Selon l'opinion la plus répandue l'exode des Hébreux a eu lieu sous le règne de Ménephthès I, fils et successeur de Ramsès II. Pour ma part j’ai depuis longtemps cherché démontrer que cet événement tombait sous le règne d'Aménophis III qui d'après mon système chronologique régna 1355-13ı8 a. J.-C.* J'étais forcé de rejeter l'opinion générale sur ce point déjà par le motif que l'exode, par rapport à l'histoire des Israélites, était chronologiquement fixé, ayant lieu environ l'an 1320 a. J.-C., et que, par rapport à la chronologie égyptienne, le pharaon Aménophis III régnait pendant ce même temps. C'était une conséquence inévitable de tout mon système chronologique.

Mais plus je refléchis sur la question de l'exode hébreu, plus je suis persuadé d’avoir tombé juste. Cependant je ne peux ni veux pas ici approfondir la question dans tous ses détails. Renvoyant à ce que j'en ai dit dans les ouvrages cités plus haut, je me bornerai pour le moment à mettre en avant quelques nouveaux arguments qui me semblent fortement parler en ma faveur. Ce qui a égaré les savants, c'est que le texte biblique qui nous raconte ces événements, surtout celui qu'on appelle le texte de l'Élohiste, sans aucun doute a été rédigé aux temps de Ramsès II qui d'après moi régnait de in 80 à IIIf a. J.-C., c'est-à-dire environ deux cents ans après l'exode. Dans cette époque, depuis la fin de la guerre de Ramsès II contre les Khetti jusqu’à la mort de Ménephthès, la relation entre l'Égypte et la Syrie était très intime. L'influence politique, sociale et civilisatrice de l'Égypte dominait en Syrie, des Égyptiens y voyageaient et y demeuraient comme fonctionnaires, gouverneurs ou administrateurs, des idées, des mots et expressions comme des marchandises sont échangées entre les deux pays, et des lettres sont envoyées de l'un à l'autre.

\footnotetext{
* Lieblein, Acgyptische Chronologie, IS63, p. 116-125, et Recherthes sur la chronolos ie sisypticnnc, \(1873, \mathrm{p} .136 \mathrm{sv}\).
}

Nous retrourons les traces de cette influence dans les récits bibliques surtout dans ceux de l'Élohiste, et non seulement dans ceux qui traitent Ihistoire du séjour des Hébreux en Égypte, où cette influence est assez naturelle, mais aussi dans d'autres parties des livres mosaïques. De là les mots et les expressions égyptiennes gui se trousent sourent dans les. livres du P'entateuque. De là la table généalogique des premiers patriarches que le chapitre v de la Genèse nous donne et qui probablement est faite d'après la chronologie égyptienne. telle qu’elle avait été fixée par l'école savante des historiens et chronologues égyptiens du temps de Ramsès II.* De là le récit du Déluge, fait de l'Elohiste dans les chapitres vii et viii de la Genèse, et formé, comme il semble, d'après le modèle de l'inondation du Nil. De là, enfin, le nom de Ramsès employé pour désigner un pays ou une rille. Cet emploi qui certainement n'était en usage qu’aux temps de Ramsès II est fait par suite d'un anachronisme dans Gen. xlvii, i , où nous lisons: la terre de Rammès comme nom du pays ailleurs appelé Gosen, et dans Exode i, if, où Ramsès est le nom d'une ville qui antérieurement sans doute a porté un autre nom.

Les exemples cités de l'influence égyptienne sur le récit de l'Élohiste nous revèlent plus ou moins clairement le temps de Ramsès II.

Les noms: "la terre de Ramsès" (Gen. xlvii, ir), et "la ville de Ramsès" (Exode i, ir), sont dans cet égard sans équiroque. Tout le monde sait que nous avons un anachronisme dans le premier endroit (Gen. xlvii, it) ; généralement on ne croit pas que c'est le cas dans le dernier endroit (Exode i, it), mais je suis persuadé que nous y avons le même anachronisme, puisque Ramsès II régnait long temps après l'exode. M. Maspero a cependant fait une oljection bien importante. Il dit: "Une conjecture très ancienne identifie asec Ramsès II le Pharaon qui n'avait pas connu Joseph (Exode i, r.). Les fouilles récentes, en montrant que les grands travaus ne commencèrent à l'orient du Delta que sous ce prince, ou sous Séti I \({ }^{\text {er }}\) au plus tôt, confirment l'exactitude de cette tradition d'une manière générale." \(\uparrow\) Mais à ce sujet je me permettrai de faire une olservation. Si le pays de Gosen, où Joseph "assigna une demeure à son père et à ses frères," était situé dans l'Ouady

\footnotetext{
* Lieblein, Récherthes sur la chronolosic Coythticnne, p. 9 sv.
+ Maspern, Mistoire antione, II, 442, note 2.
}

Tumilat, comme je le crois d'accord asec M. Naville,* et qu’il était le plus fertile, "le meilleur de l'Égspte," il s'ensuit avec nécessité, que l'Ouady Tumilat était canalisé, fertilisé, cultivé et par conséquent habité arant l'immigration de Jacob, ceest-à-dire aux temps des Hyksos au plus tard. Je soupçonne cependant que c'était déj:: Amenemha III de la XII \({ }^{e}\) dynastie qui canalisait ce pays comme il lavait fait au Fayoum. MI. Naville a trouvé dans le temple de Boubastis, situé à l'entrée de cet ouady, plusieurs monu ments des rois de la XII \({ }^{e}\) dynastie. Il dit: "Usertesen III, the greatest king of the dynasty, evidently desired to adorn Bulastis with a temple which might compete with his constructions in other parts of Egypt." Et plus bas il ajoute: "I believe that we must attribute to Usertesen III the foundation of what was the finest part of the temple, the hypostyle hall." \(\dagger\) Il est donc bien probable, que les rois de la XII \({ }^{\text {e }}\) dynastie, antérieurs de beaucoup à Rams̀̀s II, ont fait des travaux et des constructions, ont fondé des rilles, creusé un canal, cte., dans's la terre de (iosen.

Plus tard Thothmès III, selon moi l'oppresseur des Hébreux, fonda ou rebâtit la ville de Pithom et une autre ville, ci-après appelée la "ville de Ramsès." \(\ddagger\) Enfin Ramsès II, le grand bátisseur qui fonda ou restaura ou sappropria tant de monuments partout en Égypte, a laissé des traces de son activité aussi dans le pays de Gosen en appelant toute cette contrée et sa ville la plus importante de son nom "le pays de Ramsès" et "la ville de Ramsès." Ces noms étaient en rogue, ¢ fuand le texte de l'Élohiste fut définitivement rédigé et furent par conséquent incorporés dans sa rédaction.

La table généalogique des premiers patriarches, depuis Adam jusquä Noé, qui semble être faite d’après la chronologie égyptienne, nous mène également aux temps de Ramsès II. Les deux tables de rois d'Abydos, la table de rois de Saqqarah et le papyrus royal de Turin, monuments qui tous commencent par Ménès et finissent, du moins les trois premiers, par Ramsès II, prourent arec quelque vraisemblance que les savants égyptiens de l'époque de Ramsès II s'étaient occupés de l'histoire et de la chronologie de leur Irays, et

\footnotetext{
* Naville, The Routi of the Exodus, la carte.
+ Naville, Buhastis (ıSS7-1SS9), p. 9 et \(\mathbf{I}\).

}
qu'ils ont réussi à en ériger un échafaudage assez solide. Les temps paisibles et heureux du règne de Ramsès II qui suivirent Ia guerre avec les Khetti étaient plus qu’aucune époque antéricure favorables ì ces études. Les résultats historiques et chronologiques, obtenus par les savants de Ramsès II étaient connus, quand l'Elohiste rédigea son texte ; il n'est donc rien de plus maturel, qu'il les acceptait et en faisait l'application pour chronologiquement fixer l'épongue des premiers patriarches depuis Adam, en supposant que Ménès des Egyptiens et Adam des Hébreux étaient contemporains, et quïls commençaient tous les deux leurs séries respectives par l'an 3893 a. I.-C., comme un point de départ fixe.

Enfin il nous reste de parler de l'influence égyptienne sur le récit que l'Élobiste donne du déluge. Voici le récit, du moins ce qui nous en intéresse ici:
(jen. vii, 6. Et Noah était agé de six cents ans quand le Đéluge des caux vint sur la terre.
V. g. Elles entrèrent deux à deux vers Noah dans larche; savoir, le mâle et la femelle, comme Dieu lui avait commandé.
V. if. Et l'an six cent de la vie de Noah, au second mois, au dix-septieme jour du mois, en ce jour-lì toutes les fontaines du grand abyme furent rompues et les bondes des cieus furent ouvertes.
V. 13-15. En ce même jour-là Noah, Sem, Kham et Japhet, fils de Noaln, entrèrent dans larche, etc.
V. 16. Le mâle, dis-je, et la femelle de tute chair \(y\) vimrent, comme Dieu lui avait commandé.
V. is. Et les caus se renforcèrent et saccrurent fort sur la terre ; ct larcle flottait an-dessus des can.
V. 19. Et les caus se renforcerent prodigieusement sur la terre; (et toutes les plus hautes montagnes qui étaient sous tous les cieux furnt cousertes.

「. zo. Lés caux séleverent de quinze coudées plus haut ; ainsi les montasnes furent couvertes.
V. 21. It toute chair qui se mourait sur la terre expira, tant dess oiscaux que du bétail, des bêtes et de tous les reptiles qui se trainent sur la terre, et tous les hommes.
V. 2. Et les caux se mantiment sur la terre pendant eent rinfuante jours.
(icn. viii, 1. Or Dieu se souvint de Noah, et de toutes les bétes et de tous les animaux qui étaient avec lui dans l’arche. Et lica lit butier un vent sur la terre, et les caux sarrêterent.
V. 2. Car les sources de l'abyme et les bondes des cieux avaient été fermées.
V. 3. Et au bout des cent cinquante jours les eaux diminuèrent.
V. 4. Et au dix-septième jour du septième mois l'arche s'arrêta sur les montagnes d'Ararat.
V. 5. Et les eaux allaient en diminuant de plus en plus juşu'au dixième mois, et au premier jour du dixième mois* les sommets des montagnes se montrèrent.
V. 13 . Et il arriva que loan six cent-m de lagge de Noah, au premier jour du premier mois, les eaux se séchèrent de dessus la terre ; et Noah ôtant la couverture de larche, regarda, et roici la surface de la terre se séchait.
V. if. Et au vingt-septième jour du second mois, la terre fut sèche.

Voila le récit Élohistique du déluge. Nous voyons ici de nouveau que l'Élohiste était assujetti à l'influence égyptienne ; car il a clairement modelé son déluge sur l'inondation du Nil. C'est surtout l'élément chronologique du récit qui le prouve avec évidence. En supposant que les dates indiquées étaient en effet égyptiennes et conformes aux époques annuelles de l'inondation du Nil, je les rapprocherai des dates de notre calendrier Grégorien pour faciliter la comparaison avec l'année solaire et avec les fêtes périodiques célébrées par les F́gyptiens en l'homneur du Nil.
(1) 2 I Juin, Grég. \(=\) Mois 2 , jour \(17^{\mathrm{e}}\) de l’année vague des Égyptiens. Commencement du déluge comme celui de la crue du Nil au solstice d'été.
(2) iS Norembre, (irég. \(=\) Mois 7, jour \(17^{\mathrm{e}}\), l'année rague. Après \(I_{50}\) jours, les eaux du deluge ont atteint leur plus grande hauteur et commencent dés lors à décroitre. Ce terme correspond probablement à la fête niliaque du 30 Choiak.
(3) I Mars, Grég. \(=\) Mois 1 I ( 10 ), jour \(\mathrm{I}^{\mathrm{er}}\), l'année vague et fixe. Les sommets des montagnes apparaissent. Nous

\footnotetext{

 au onziome mois. Aussi la tratuction copte donne \(\delta\) © M M GOJ íes\&25ㅎ, au onsime mois. (Der Pentateuch koptisch, von laul de Lagarde.) C'est naturellement la septante qui a domné au traducteur copte la lecture : au onsiime mois.
}
retrouvons re jour it cette époque du déluge, je pense, dans la féte niliaque du 15 Epiphi.
(+) 5 Mai, Grég. \(=\) Mois r , jour \(\mathrm{I}^{\text {er }}\), l'année fixe et vague suivante. "Les eaux du déluge araient tari sur la terre." Cette date correspond sans doute à la fête niliaque du 15 'Thot.
(5) 21 Juin, Grég. = Mois 2, jour \(27^{\circ}\) de l'année lunaire des Hébreux \(=\) Mois 2, jour \(17^{\circ}\) de l'année vague des Égyptiens. "La terre était complétement sèche " après le déluge.
Quelques explications sont ici nécessaires. Mais avant de les donner, je me permettrai de faire une observation. Pour traiter la chronologie égyptienne il faut tenir compte des trois années différentes: l'année sothiaque avec une durée de 365 jours et 6 heures, l'année solaire de 365 jours 5 heures 48 minutes et 48 secondes, et enfin l'année vague de 365 jours. Le point de départ est l'an 3282 a. J.-C., quand le lever héliaque de Sothis, le solstice d'été et le commencement de la crue du Nil tombèrent sur le même jour, le 20 Juillet du calendrier Julien. A cause de la différence entre l'amée sothiaque et l'année solaire, qui était la même que celle existant entre l'année Julienne et l'année Grégorienne, le commencement de l'année solaire et de la crue du Nil tomba dans le douzième siècle, c'est-à-dire, selon moi, pendant le règne de Ramsès II, environ quinze jours avant le lever de Sothis.*

Regardons maintenant les dates du déluge citées par la Bible. Je traiterai chaque date séparément.
1. Le déluge commença au dix-septième jour du second mois. Quclle est cotte date? Elle ne cadre pas à l'année des Hébroux, qui commencait alors au printemps. \(\dagger\) Le second mois correspondait ainsi arec notre Mai, et nul auteur Hébreu ne pourait songer à faire commencer le déluge au mois de Mai, qui précisément est le commencement de la saison sèche en Syrie. Il n'est donc pas probable que ce soit lamnée des Hébreux dont il s'agit à cet endroit. Au contraire, toute la difficulté tombe avec la supposition, que nous

\footnotetext{
* Du muins à Thibes on le lever de Sothis avait lien quelques jours avant celui obscré à Memphis. Cfr. Lepsius, Chrondogic der Aesypter, Einleitung, 1. 216.

 wintemys comonençuit."
}
avons ici l'anée vague des Égyptiens, et que le déluge a été calqué sur l'inondation périodique du Nil. Mais alors il faut bien remarquer une chose. Comme la crue du Nil commençait vers le solstice d'été, c'est-i-dire au commencement de l'amée fixe des Égyptiens, cette date du "second mois le \(17^{7}\) jour" ne peut pas appartenir à l'année fixe, mais doit nécessairement être une date de l'année vague des Égyptiens. A la vérité, le \(17^{\circ}\) jour du second mois de l'annéc vague correspond ici avec le \(\mathrm{I}^{\text {er }}\) Thot de l'année fixe. A quelle époque cut lieu cette coincidence? Le calcul est facile. C'est l'an 1138 a J.-C. (1322 a. J.-C. \(\div\left(4_{6} \times 4\right)=1322\) a. J.-C. \(\div 184\) ans.) Si mon interprétation de notre endroit biblique est juste, nous obtiendrons ainsi le résultat aussi inattendu qu'extrêmement important, que la rédaction définitive du texte Élohistique a eu lieu en l'an 1138 a. J.-C., c'est-ì-dire dans la dernière moitié du règne de Ramsès II, résultat qui est d'accord avec ce que nous avons vu plus haut.
2. Le déluge commença "au second mois, au dix-septième jour."." "Et les eaux se maintimrent sur la terre pendant cent cinquante jours." \(\dagger\) "Et au bout des cent cinquante jours les eaux diminuèrent." \(\ddagger\) "Et au dix-septième jour du septième mois l'arche s'arrêta sur les montagnes d'Ararat." "

L'intervalle de \(: 50\) jours tombe ainsi entre le \(17^{\text {e }}\) jour du second mois et le \(17^{e}\) jour du septième mois; les 50 jours sont done exactement cing mois, c'est-à-dire, nous arons ici clairement des mois de trente jours. Mais un calendrier dont les mois comptaient trente jours n'étaient d'usage qu'en Égypte; du moins on ne connait aucun aute peuple de l'antiquité qui en eût l'usage. Nous avons ici, je pense, la preuve la plus décisive, que les dates de l'Élohiste sont entièrement égyptiennes.

Mais il est permis, je crois, de reconnaitre une autre coincidence, assez curieuse, dans notre date. si le \(17^{\mathrm{e}}\) jour du second mois coïncide avec le solstice d’été ou le 2 I Juin, Grég., le \(17^{\circ}\) jour du septième mois, ciny mois ou 150 jours plus \(^{\text {lu }}\) tard, tombe sur le 18 Novembre, Grég. Or Brugsch a montré, d'après un calendrier à Dendera, que les Égyptiens célébraient une fête nilotique au 30 Choiak.

\footnotetext{
* Gen. vii, in.

}

Le 30 Choiak de lamée sothiaque tomla aux temps ptolémaïques, d'aprés la réduction de Brugsch, sur le if Novembre.* Pendant le regne de Ramsés II le 30 Choiak Sothiaque tomba environ sept jours avant le 16 Novembre, Grés., mais dans le nord de l'Égypte aux environs de Gosen les eaux du Nil tombent quelques jours plus tard qu'en Haute-Egypte, de sorte que les différences se compensent. İ la vérité, une fête d'une telle nature a nécessairement dî varier selon les localités. Aujourd’hui au Caire le Nil est tombé jusqu’à la moitié de sa hauteur environ le 10 Novembre, (rrég., à peu près cinq mois après le commercement de la crue. Donc, il n'est pas improbable, que le \(17^{e}\) jour du septième mois de la Bible, date qui est cind mois ou 150 jours postérieure an commencement de la crue du Nil, coïncide avec le 30 Choiak, auquel jour une fête nilotique a été célćbrée qui selon sa nature tombait vers le milieu du mois de Novembre, Grég.

3 et 4 . Au premier jour du onzième moist les sommets des montagnes se montrèrent ; ( Gen . viii, 5) et au premier jour du premier mois de lamnée suivante les eaux se séchèrent. (Gen. viii, 13.) Entre ces deux dates, regardées comme égyptiennes, il y arait un intervalle de 65 jours, savoir deux mois à trente jours et cinq jours complémentaires. Je retrouve les deux dates bibliques dans les deux fêtes niliaques, célébrées par les anciens Égyptiens al: \(I_{5}\) Epiphi et au 15 Thot, qui également sont séparées par un intervalle de 65 jours, c'est-a-dire deux mois à 30 jours + cing jours complémentaires. Ces fêtes furent célébrées régulièrement, du moins aux temps des Ramessides, car elles sont mentionnées dans trois différentes inscriptions à Silsilis, yui portent les noms et les dates des rois Ramsès H, Ménephthès et Ramsès IIf.+

Nous lisons dans toutes les trois inscriptions la meme phrase, qui est asse\% claire:

\footnotetext{
* lirugsch, Matériater, p. 41, iere allemative.
+ l'adopte la lecture: on:̈̈m, mois au lien du dixiome dapres la variante de la Septante et daptes la traluction copte; voy. plus haut.
\({ }_{-}^{+}\)Leppius, Denkmiker, III, 175, 200 et 218.
}
"Offrande due à ce dieu (Hapi, le Nil, consistant) en choses (apportées sur) l'autel au 15 'Thot et au \({ }_{5} 5\) Epiphi comme tributs de chaque année."

Brugsch fait observer que ces deux fêtes sont séparées l'une de l'autre par un intervalle de \(6_{5}\) jours, et il pense qu'elles "représentent les jours principaux de la crue du Nil: son commencement et sa hauteur indispensable pour inonder le pays."* Pour ma part je serais tenté de croire que la fête du 15 Epiphi fut célébrée au temps, quand le Nil se trouvait rentré à son plus bas nireau, et que celle du 15 Thot célébra le commencement de la crue. C'est pour le moment une question d'un intérêt secondaire ; en tout cas, et c’est ici de la plus haute importance, les deux dates bibliques, le \(\mathrm{r}^{\text {er }}\) jour du \(\mathrm{II}^{\mathrm{e}}\) mois et le \(\mathrm{r}^{\text {er }}\) jour du \(\mathrm{I}^{\text {er }}\) mois de l'année suivante arec un intervalle de 65 jours correspondent exactement avec les deux dates égyptiennes, le \(\mathrm{I}_{5}\) Epiphi et le \(\mathrm{I}_{5}\) Thot comme jours des fêtes niliaques.

Mais il y a une autre question qui se présente ici. Le \(\mathrm{I}^{\text {er }}\) jour du \(1 \mathrm{I}^{\mathrm{e}}\) mois et le \(\mathrm{I}^{\mathrm{er}}\) jour du \(\mathrm{I}^{\text {er }}\) mois de la Bible, comment peuvent-ils correspondre arec le 15 Epiphi et le 15 Thot? Les deux dates égyptiennes appartenaient, comme Brugsch déjà a remarqué, sans aucun doute à une année fixe. Car quoique les trois inscriptions de Silsilis sont datées de différentes époques et qu'elles embrassent un espace de plus de 120 ans, elles donnent toutes les trois les mêmes dates, le 15 Epiphi et le 15 Thot, pour les deux fêtes niliaque.i Cette année fixe était, je crois, l’année solaire. Et de plus, pour le dire toute suite et sans aucune ambiguité, je rois ici une indication assez curieuse de ce fait, que lannée sothiaque, comparée avec l’année solaire, aux temps de Ramsès II, était environ quinze jours en retard.

Nous avons vu plus haut que l'an 3282 a. J.-C. le lever héliaque de Sothis et le solstice d'été, sous le degré de Memphis, tombèrent sur le même jour, le 20 Juillet du calendrier Julien. Mais aux temps de Ramsès II les savants avaient, par leurs observations, découvert, que le lever héliaque de Sothis, sous le degré de Thèbes, avait lieu environ quinze jours. après le solstice d'été, ou en d’autres mots que le \(\mathrm{I}^{\text {er }}\) Thot d'un calendrier sothiaque coincidait avec le \(\mathrm{I}_{5}\) Thot d'un calendrier solaire. Les tableaux astronomiques des tom-

\footnotetext{
* Brugsch, Matíriaux, p. 3 S.
+ Brugech, Matíriaux, p. 37.
}
beaux des Ramessides* nous en donnent la preuve évidente. Ces tableaux donnent pour chaque quinzaine de l'amée les apparitions des étoiles à chacune des douze heures de la nuit. Or, sous le 15 Thot nous royons l'étoile de Sothis apparaitre it la douzième, c'est-à-dire à la dernière heure de la nuit, ce pui ne peut pas signifier autre chose que le lever héliaque de Sothis. Dans le tableau du , or Thot c'est 火 需 \(\star\), l'étoile de Sahu-(Orion fui est notée à la douzieme ct dernière heure de la nuit, on n'y voit pas du tout l'étoile de Sothis; ce n'est qu'au 15 Thot que \(\neq \triangle \otimes\), l'ćtoile de Sothis aprarait au ciel du matin aramt le solicl, et c'est justement ce qu'on appelle le lever héliaque de Sothis. Quoiquil n’y a personne, autant que je sais, qui ait compris ces textes de cette manière, j'ose affirmer que nos tableaux astronomiques sont datés selon l'année solaire, qui est lomnée de la nature, l’année qui règle les événements
 coincide avec le solstice d'été et dont le 15 Thot coincide avec le lever héliaque de sohhis. Je ne veux pas par cela dire que les Begptiens se soicht servis d'un calendrier solaire ou sothiaque; les savants en avaient la connaissance et ils sen sont servis quelquefois pour noter les événements astronomiqués, comme dans nos tableaux, ou les fétes religieuses. mais d'ailleurs partout ils ont daté les inscriptions selon le calendrier civil et ordinatre avec son année vague de 365 jours.

Quoicuil en soit, les tableaux astronomiques prousent asec evidence, que les prétres des Ramessides, et probablement aussi cenx de Ramsès II.ì avaient obscrvé qui le \(\mathrm{I}^{\text {"r }}\) Thot sothiaque concidait avec le 15 Thot solaire et que, par conséquent, le \(1^{\text {er }}\) Epiphi sothianue tombait an \(\mathrm{I}_{5}\) Epiphi solaire. Pour fixer léprofue des deux fétes niliagues dont il est question ici, les prêtres du temps de Ramesés il ont daté l'une du \(1^{\text {er }}\) Eppiphi sothiaque ou du \({ }_{5} 5\) Epiphi solaire, lantre du \(1^{* 2}\) Thout sothiague ou du 15 Thot solare, et, à la vérité, nous retrourons ces dates fixes dans les trois inseriptions is Silsilis des rois Ramsès 11, Ménephthès et

\footnotetext{
Leprini, J) mamuler, 111, 227 Cl 22S.
t Ce fait semble elre indiqué par l'arrangement matériel des constellations doms le Ramerecum, oit oinn est phacé avant Sothis thans le vide singulier entre

}

Ramsès III. Les dates de la Bible, le \(\mathrm{I}^{\mathrm{er}}\) jour du \(\mathrm{II}^{\mathrm{e}}\) mois et le \(I^{\text {er }}\) jour du \(\mathrm{I}^{\text {er }}\) mois, correspondent exactement au \(I^{\text {er }}\) Epiphi et au \({ }^{\text {er }}\) Thot ; car Epiphi est le onzième mois et Thot le premier mois de l'année égyptienne. Je crois donc pouvoir avec quelque vraisemblance identifier les fêtes niliaques du \(\mathbf{I}_{5}\) ( \(\mathrm{I}^{\mathrm{er})}\) ) Epiphi et du \(15\left(\mathrm{r}^{\text {er }}\right)\) Thot avec les dates données par la Bible, et affirmer, que la première de ces fêtes était la fête des plus basses eaux et la dernière était la fête du commencement de la crue sensible.

Mais je dois ajouter encore une remarque. Quoique ies prêtres avaient fixé ces fêtes selon l'année fixe, le peuple les célébrait, comme d'ordinaire, selon l'année civile et vague,* de sorte que, en l'an ir38 a. J.-C., qui était l'an supposé de la rédaction de l'Élohiste, les deux fêtes niliaques étaient deplacées et tombaient 46 jours avant l'érénement qu'elles devaient célébrer.

La conclusion est claire: "Le premier jour du onzième mois et le premier jour du premier mois" que la Bible nous donne (Genèse viii, \(\mathrm{I}_{3}\) ) sont des dates purement égyptiennes.
5. "Au vingt-septième jour du second mois, la terre fut sèche." (Gen. viii, I4.)

A cet endroit E. Reuss fait la remarque: "En calculant la période entière d'après les époques indiquées, et en supposant qu'il n'y a pas de faute dans les chiffres, nous obtenons une année et ıо jours. Mais quelle année? Chose curieuse! une année lunaire et io jours formeront une année solaire. Serait-ce un indice que le mythe a passé par diverses mains et que le calendrier du déluge aurait été réformé d’après les usages de peuples divers?" \(\dagger\) C'est justement le cas ici. L'Élohiste a donné les époques périodiques de l'inondation du Nil pendant toute l'année égyptienne de 365 jours, mais après coup il a remarqué, que cette année était ro jours plus longue que l'année lunaire des Hébreux, et pour

\footnotetext{
* Dans le Décret de Canopp, 1. 21, nous lisons: "Pour qu'il n'arrive pas le fait que des fêtes partout en Égypte célébrées en hiver, soient célébrées en été, dans un temps futur, à cause du déplacement du lever de la divine Sothis d'un jour tous les quatre ans, et que d’autres fêtes célébrées en été en ce moment, soient célébrées en hiver en des temps à venir, comme l'événement a eu lieu aux époques anciennes . . . qu'il soit," etc.
}
\(\dagger \quad\). Reuss, La Bible, Ancient Testament, \(3^{e}\) partie, I, 322.
ce motif il a donné le \(27^{\mathrm{e}}\) jour du \(\mathrm{II}^{\text {d }}\) mois d'après le calendrier Hébren, au lieu du \(17^{\mathrm{e}}\) jour du second mois d'après le calendrier égyptien.

Nous avons donc ici un nourel indice de l'influence égyptienne sur le récit de l'Élohiste.

Christiania, le a Juin, i 898.

Remarks were added by Dr. Lioy; Mr. Stanley A. Cook, Mr. John Tuckwell, the Rer. C. J. Batl, and the Chairman.

\section*{THE B.ABYLONIAN IDEOGRAMI FOR "IMAGE," ANI)} THE SLATE PALETTE FROAI HIERACONPOLIS.

\author{
By Prof. Dr. Fritz Hommel.
}

Before I continue my "Assyriological Notes," I purpose to give as a special communication the following most remarkable coincidence, which I think to be the very keystone of my several proofs for the Babylonian origin of the Egyptian civilization.

The ideogram 偓今 means "statue," "image" (of a god or a king), Sumerian alan (borrowed by the Semites as lênu) and alam, Bab.-1ss. salmu (
 well-known ideogram for scalidlu, to rest, to sleep (shafel infin. shuşlulu), and irshu, couch. The best proof lies in the form of the old Babylonian hieroglyphic signs : comp. the admirable new book of M. Thureau Dangin,* Recherches sur lorigine de l'criture Cuneif., "I. Les formes Archaiques." (Paris, iS9S.) No. ioS (alan, " statue," "image")-

* I differ from M. Thureau Dangin only in giving the oldest upright form of the signs, instead of the later lying or horizontal form ; that " l'éciture verticale" is the criginal, is also his opinion (comp. his look, p. XI f., against Irof. Delitzsch, whose book. Die Entstikur, ett., is a complete failure in the opinion of all comp eient scholars).

With the latter may be compared the Egyptian hioroglypl，
 least，with a corpse on its back，in hiematic writing

Another syonym of＂rouch，seat，＂is，as was proved by the late 1．le Page Renouf，P．S．li．．\．，XIV，p． 17 ff，the Egyptian hieroglyph
hawk，upon which the Horustitle of the Egrpaian kings was inscribed，＂varr．开雨而．

The oldest variants are now found in the pre－historic momments of Aloydos and Negadah，comp．Morgan，Recherehes．Vol．II（I＇aris， 1897），e．．．．：－
p． 334 ：

name always inscribed in it，and the holy hawk（lforus）sitting upon it．as，for instance，

Now it cannot be a chance，that also in the ealy Pablonian inseriptions，the sign for＂couch，＂irshu，WTH A Bren \(-Y_{<} Y\) ， issurn）LroN IT，means to give a holy name to the king（by a god）， or to sive a name to a god（hy the kingr ，Sumerian sor．Bab．－Ass．，

But this is not all．Our surprise must still increase．if we now return to the strange Babylonian symbol for＂statue，image，＂viz．， the same couch or seat．With two ox heads on the top，＂and if we

> Sec a', mese.
compare with it the slate palette from Hieraconpolis, found by Mr. Quibell at el-Kab, which is perhaps the oldest monument ever found on the soil of Ancient Egypt (see Aegyptische Zeitschrift, a898. Plates XII and XIII). This slate palette represents the Pharaoh on the front as king of Lower Egypt and on the back as king of Lipper Egypt, and has the following form :

Upon the enclosure of the holy name of the king the hawk is wanting, but instead of it two heads of oxen are placed to the left and to the right, so crowning the whole monument, which was, as the representation shows, destined for an "imare" of the Pharaoh.

Perhaps we may also compare the Hebrew ark with the two cherubs above it (Ex. xav, i8). This ark
 too is connected with the holy name of the Lord (2 Sam., vi, 2). Also the well-known cippus of Carthage (see the woodcut), with the two holy columns, may have a relation to it ; and so also the two ox heads* on a monument of South Arabia in the Berlin Museum (Mitth. aus den Oriental. SammIungen der kgl. Museen, Heft VII; Himyar. Inschriften, Berlin, 1893 . Plate IV, No. i), and perhaps the mame

\footnotetext{
* In the midst two palm trees, at the right and left the head of a bull ; compare I Kings vi, 29 (cherubim and palm trees), and Ezek. xli, IS.
}
(or titie?) of a Sabean official (or priest ?) דתורבּהן (dhû thaurînhinn, i.e., the man with (or over?) the two oxen).

In recapitulation of my discovery, it seems to be without all doult (i) that for the very origin of the Babylomian script a holy bird (of course the symbol of a grod) sitting on a couch (the place of rest, perhaps the grave), represented the holy "name" of the king; and (2) that two ox heads (of course also a mythological symbol) placed on the same couch meant the "image" of a king or agod; and (3) that exactly the same two ideas or mythological conceptions are found with the old Egyptians at the cradle of their civilization.

If one remembers the proofs I gave for the identity of the genealogies of the Babylonian and Egyptian gods in the Transactions of the Louldon Congress of Orientalists (Heavenly Ocean, Bab., Nun or Anum, Eg., Nun or Tum : Air, Bab., In-liilı, Dg.. Shu; Earth, Bab., En-ki, Eg., Keb or Seb; his wife, Bab., "great consort of Nun," Ey., Nut ; then the four children of the Earth-god, Bab.,
 Nirgal, the hostile brother of Merodach, Eg., Set, the hostile brother of Osiris; his wife \(2 \boldsymbol{Y}\) ? i.c., a house with the inscribed phonetic indicator ghat, Eg., Nephthys, written with the sign of the house with the subscribed sign meht, "lady"; and lastly, the son of Merodach, Nabû, as the god of Dilmun,* written with the bird and the couch, comp. W.A.I. II, 54, \(74=\) Brimnow, No. 2291, Eg., Horus, son of Osiris, the god of the hawk, who sits upon the couch i, and if he now considers the identity of the Babylonian and Egyltian representations of the "holy name" and the "image," then he must concede the common origin of the Babylonian and Eygptian civilization, unless he is a professional sceptic : such scepticism, howerer, is the death of ail scientific progress.

In conclusion I should like to remark that I now have found out too, the explanation of a sign which hitherto molsody was able to explain, vi\%: \(\left\{\begin{array}{l}\text {, to form, to make; image, likeness. } \\ \text { (Sum. sim, Semit. banit, Fima, etc.) }\end{array}\right.\)

\footnotetext{
* In Eastern Arehia; comp. Wiedemam, in Morgan's Recherthes, II, 226 f. and the sife which plays Magan in the oldest Jal ylonian inscriptions.
}

If we compare the sign for "man" (viz., the bust of a man),
 , it is quite clear that gim meant originally
to "form" the statue of a man, comp.

. At the same time we see by it the high stage of civilization even in the earliest time of the Babylonian history ; for aiready the oldest inscriptions furnish several instances of the use of the sign gim " to form," "to make like."

\section*{B．ABYLONIAN HIEROGIVPHICS．}

\author{
By Rer．C．J．Ball．
}
（The following remarks，upon a paper which I had the honour to read and elucidate at the last meeting of the Society，are not made in any spirit of carping or contentious criticism．My learned friend is far more competent to discuss such questions than I am ； and every unprejudiced mind must welcome his theories and dis－ coveries in this difficult sphere of research．）

The sound of the compound character is given by the Syllabary（ \(s .378\) ），where we find the phonetic addition a－la－am，that is，alam．The other pronomnciation is inferred from the fact that in the inscriptions of（iudes（A，III， 2 ，for instance） the character has the phonetic addition，\(-n\) ，implying for the whole group the sound alama．This inference is also made probable by the Semitic word la－a－nu（limu），appearance，aspect，form，image， which occurs in other texts as the equivalent of the character，and by the well－known fact that final \(m\) and \(n\) interchange in Sumerian， just as they do in Chinese．

Neglecting the Sumerian preformative a，as not belonging to the root，we may at once point out that in Chinese 臉 lien，lim or ！ 1 m, face，countenance，agrees very well with the Babylonian terms both in sound and meaning．Moreover，the ancient form of the phonetic with which it is written，viz．，今ेष presents some like－ ness to the old Babylonian hieroglyphic forms of the character for ＂image．＂

There are also the words 覽 lan，lam，to look at，and 雨 lian，：，limus，two，both，a pair，double；a term which generally indicates some likeness or relationship．The old forms of the latter
 may perhaps have some connexion
with those of the Babylonian character．Returning to the con－
sideration of these, we may note the material variations which they present in the different inscriptions ; variations which make it a matter of great uncertainty to determine the original figure from which ali have more or less diverged. Exactly the same difficulty occurs in dealing with the old Chinese characters. Parts of an ideogram, which have become obscure in the lapse of time, are altered so as to suggest something else. In the present instance, there car be little doubt that the second element is the character for conch, bed, to lie down, etc. In Gudea's writing the top of this character is so modified as to suggest the character fiy KU, azag, splendid, precious (Amiaud, No. 260). Now there can be no question that in Prof. Hommel's three middle forms we seem to have the character \(\frac{11}{V}\) GUD, GU, the Chinese nsurn, ngiu, nsu (Japanese siu), os, repeated. But if we may trust the evidence of Amiaud (see D) Sarzec, Dicoutortes en (Chrldée), the horizontal line of the triangle, completing the outline of the ox's head, is never supplied in the inscriptions of Gudes, where we usually find The third of these middle forms is, therefore, incorrect in this respect. And when we compare Professor Hommel's first and last forms of the character with it in GuDEs, A, col III, 2, our earnest liant speculation may prove to be well be allowed to blind us to the difficulties may succeed in clearing away. My hypothesis of the Babylonian origin of the form of
 guage and writing is too well-known to need any further remark here.

Instead of the heads of oxen, Gundes forms. especially the one referred to above, suggest the knees ( y ) Amiaud, No. I90) ; so that if in this instance (iudea's writing be, as is possible, the most trustworthy representative of the linear script. the true analysis of the Babylonian
 character for "image" will be kntes + couch. When we recall the appearance of the seated statues of GUDEs, and the Egyptian kings, in which the knees are so prominent, we may be inclined to think that the Babylonian character for "image" has been simplified by omission of the upper portion of the original hieroglyph
(head, trunk, arms, etc.), only the prominent feature of the knees and the front of the couch or throne-bed being retained. At any rate this would seem to have been the notion of the scribes of Guber's time.
lut further, inasmuch as there is considerable likeness between the character for "sun," "bright," "pure," "shining," viz, \ll (Amiaud, No. 212), and the knee character, it is not impossible that the latter has been substituted for the former in (ividea's writing. In that casce, the analysis of the image-character will be lad +Na , bright couch, or splendid throne-bed (the apparatus for sitting and reclining is not as strictly differentiated in the East as it is with ourselves) ; and it is worthy of notice that the writing becomes phonetic, after the Chinese fashion: \(\mathrm{la}(\mathrm{g}) \mathrm{ina}=\) lam.

The Sumerian word na, naids, bed, to lie down, resembles the Japanese nedai, couch, ne-ru, to lie down, sleep, ne-doko, bed, ne-bī, sleepy-head, etc.

I cannot see that the Egyptian lion-bier, with the corpse on it, which as an ideogram is read sdr, to be at night, to rest, has anything to do with the Babylonian character for "image."

Professor Hommel's next comparison, that of the Egyptian hieroglyph of the sacred hawk (Har, Horus), standing on a frame, on which the Horns-title of the king was inscribed, which he identifies with the old Babylonian idcogram for \(\mathrm{s}_{3}\), to name, is certainly a very remarkable one. It is perhaps no objection to it that sa is not restricted to the uses which he mentions, but signifies to name in general: cas., mu sa.. is mala shuma mabit, "whatever bears a name," i.c., every existing thing. There is, however, no trace of inscription, nor any suggestion of such a thing, in connexion with the Babylonian character. It is simply a couch with a bird upon it.

I conclude for the present with the remark that Professor
 lighly ingenious, hut in my opinion unguestionably correct.

\section*{I．}

The subscription of the Greck Book of listher is very much more instructive than credible．It gives us the earliest date and the highest authority which the Synagogue of Alexandria could dare to assign for the feast of Purim which they kept．According to the subscription，Dositheus，who called himself a priest and Levite，i．e．，a Levitical priest（as is well known，the title was not obsolete in Palestine whenever the Book of Chronicles was written（II Chron．sxiii，is）； we still find the Levitical priesthood，Hel．vii，5），brought the trans－ lation of the letter of l＇urim，which he guaranteed had been made by Lysimachus in Jerusalem in the fourth year of the govermment of P＇olemaens and Cleopatra．It is generally agreed that the P＇tole－ maeus in question is Philometor ；but his fourth year is，as it happens， a rather uncertain term；he was deposed and restored more than once． We camot reckon from his first accession in iSy b．c．，for he was not married then，and our writer reckons by a joint reign．He probably married in 668 e．c．：reckoning from then we come to 165 1．．C．，the year of the purification of the Temple，or 1．．c． 164 ．that of the death of Antiochus Epipanes．After this he was deposed once more， and went to Rome in \(16+4\) ，to secure a final restoration；the fourth year from that should bring us to 161 （the year of the death of Nicanor），or 160 （the year of the death of Alcimus）．The writer almost seem．s to imagine that the letter of P＇urim had newly arrived at Jerusalem，when Dositheus and his son I＇tolemaeus were there； they apmarently knew no Hebrew，and were dependent upon Lysimachus for a translation．If he had recollected that the original Hehew ！urported to be written under Nerxes，or at latest，according th）the text，cularged in IAX，umber Artaxerses Ochus，he might have taken for granted that Esther，like the other books，was trans－ lated carly in the P＇tolemaic period at Alexandria．But this hypotheris was excluded，because he thought he knew that the Jews at Aexandria began to keep the feast，at earliest in the
fourth year of Ptolemaens and Cleopatra. Now "the letter of Purim," which Dositheus brought, is plainly "the same" as one that came to Jerusalem. The question arises whether the feast of Purim actually passed from Babylonia to Judæa at or about the date which the witer assigns. As is well known, the writer of the First Book of Maccabees records the institution of Nicanor's day without reference to P'urim ; while the writer of the Second tell us that it was to be observed before "Mordecai's day," and the canonical book of Esther explains at length why the fifteenth day of Adar was the great holiday in "Shushan," while in the country parts it was the fourteenth. The Greek book of Esther is of course much later than \(16+\) b.c.: that Haman appears as a Macedonian traitor, proves of itself that the Jews of Babylonia were no longer under Greek dominion ; this brings us down to 127 1.c., the death of Antiochus Sidetes at the very earliest, and that is probably too early; for Sidetes, though he checked the growing ambition of the Maccabees to renew a Jewish state, was, like Antiochus the Great, a patron of the Jewish church. It might almost seem as if one lesson of the canonical book of Esther was that Israel might carry self-defence against persecution very far compatibly with deroted loyalty to the head of a heathen empire. Mordecai is the saviour of Ahasuerus. Jonathan, when recognised as High Iriest, after more than seven years of conflict, rendered important services to Alexander Balas and to Demetrius II and to Antiochus VI. John Hyrcanus, after his enforced surrencler of Jerusalem to Antiochus Sidetes, rejoiced to know, by revelation, the victory of his sons in the service of Syria. In the (reek version (as distmguished from the Greek additions) Artaxerxes in the letter in which he authorises the Jews to stand for their lives, also grants them the use of their own laws. We might almost imagine the Jews of Babylon were persuaded that the Maccabees were only exerting the privilege granted by an indefeasible charter-under the law of the Medes and Persians, which altereth not. Neither Lagarde's theory that the festival was originally Persian, nor Iensen's, that it was originally Babylonic, explains why the Jews should have adopted it. The least unlikely reason is that the Jews in Shushan really had a wonderful deliverance, when the festival came round. The lists of the returned exiles in Ezra and Nehemiah are headed in both places with the same twelve names, possibly lovers of the nation, by whom at different times more or fiwer of the banished were brought home.

Among these we find the name of Mordecai, and the fragmentary recerd in Ezra (iv, 6) mentions a letter arainst the Jews in the reisn of . Thasuerus. Supposing that the Babylonian feast originally commemorated a victory of Merodach and Istar, a god and goddess of Babylon. over Humbaba (Haman) and Vashti, a god and goddess of Elam, the legend must have been well on the way to be misunderstood in the days of Xerxes. We can hardly tell how old the temple legend of Herapolis, which bas reached us among the works of Incian, was when it came to be written down in Greek; there Humbaba (who figures as a tyramical conqueror in the Zodiac legend in Assurbanipal's library) appears under the name of Kombahos as a romantically devoted courtier, who receiving a commistion to wait on the Queen of Seleucus, when building a temple, made himself an eunuch to avoid appearance of evil (Esther vii, S). If the legend had become a mere popular tale in the days of Serses, and if the Babylonish and the Persian festivals fell at the same time, it is quite possible that in the days of the Maccabees the Jews may have confounded the names of both. Certainly the mame of the festival in L.X. and Josephus is more easily explained from the Persian than from the Babylonian. Jastly, we may notice that the letter of Purim has not the anthority of the High Priest and Elders and the congregation of Jcrusalem, which is chaimed for at least the second of the opening letters in II Maccabees, though we misht expect this if the writur supposed that in the fourth year of Philometor the Jews of Jerusalem wished to see a well-established festival of their own taken 11 ) in Alexandria. In fact, the authorities of the second Temple were against the celebration at first ; we hear of \(S_{5}\) Elders, including 30 prophets, who made mock of it. In the First Book of Maccabees, which says nothing of Mordecai's day, we read that a celebration of Nicanor's day was established by public authority. Assuming that the oldest part of the book up to xiv, is was written some time after Simon's death (xiii, 30 ), we might ask Whether the feast of Purim was established in Palestine, before the profanation of the Temple by Pompeius and its plunder by Crassus tumed the eyes of a section of puritan nationalists to Parthia.

\section*{Il.}

Weread that Josiah defiled Tophet (II Kings xxiii, ıo). Here, and in Itremiah (vii, 31 and xix, \(1+\) ), the word is associated with the sacrifices of children. In Is. xxx, 33 there is a deseription of a
pyre kindled by the breath of the Lord, with the parenthetic remark, a gloss according to Duhm and Cheyne, "that too is for the king," or " is that too for the king?" i.e., the king of Assyria. The gloss would, if so, be due to a reader who was familiar with some solemn burning that had to do with kings. Robertson Smith, "Religion of Semites," 353, sq\%., thinks of the burning in effigy of a royal theanthropic victim; "burnings "were an important part of the funeral solemnities of the Kings of Judah, though their bodies were buried. In the ritual of the Levitical sin offering, burning "without the camp" had a large place: and this had to be done in a clean place. If Robertson Smith is right in deriving the Levitical sin offering from the "old piacular holocaust," the priests, the sons of Zadok. must have had a place for burning without the gate. As early as Hosea, another theory of the sin offering had become familiar, the penitent brought a sacrifice, of which he was not worthy to eat, so the priests ate the sacrificer's share of the sacrifice. and burnt the priest's share on the altar in the court of the house. Hence, supposing that "Tophet," which (like "Molech") has the vowels of "Bosheth," was originally the place for burning "without the camp," it may from the time of Ahaz, the first King of Judah to make his son pass through the fire, have been used increasingly, at last all but exclusively, for the rites of "Molech." Supposing it was never used but for those rites, we should be almost forced to believe that they were immemorial.

\section*{III}

We read, II Sam. viii, io, Hadadezer (King of Zobah) had wars with Toi (King of Hamath). This certainly authentic notice is the foundation for the common assumption that Zobah lay north of Damascus, probably between Damascus and the Euphrates; but this is, as Winckler points out, highly improbable, if Saul (I Sam. xiv, 47) fought against the kings of Zobah. A; the Philistines, or their fast friends, held Bethshan to the end of Saul's reign, he cannot have gone fighting to the north of Damascus. In the time of thab, the King of Israel hoped at most to meet and leat the King of Syria in Aphek, a little north of the Yarmuk. On the other hand, Saul began by delivering Jabesh Gilead from Ammon; and his Ammonite war may have led to a Syrian war like I avid's. We may infer from the name Kenath, that the Kenites had a scttlement near the Hauran, though we meet them first in the region of the Exodus. According
(0) Chronicles, the Syrians who came to the help of the Ammonites from Naacah, 'lob, Zoba, and Damascus mustered at Medeba, not far north of Amon. According to 11 Sam. viii. the Syrians of Damascus came to succour Zobah after the first defeat. All this looks as if we ought to seek Zobah, as Winckler proposes, in the neighbourhood of the Hauran. If we are to imagine the Syrians of Zobah half nomadic, with summer and winter pastures many leagues apart, over which the greater part of their hordes ranged siowly, as the Anazeh move now, from the Upper Euphrates as far as Nejd-they might easily come into conflict with Toi, though their city or cities, where a few of their great men had fermanent houses, may have been in the Haman, the next point beyond Ammon, to which a king of Israt would come if he set out "to establish his border "by the Emphrates."

\section*{IV.}

In (jenesis xxxii, 52 we seem to learn that the heap of stones, and the tall stone set upright somewhere upon Mount (iilead, were regarded as the houndary between Israel and Aram. We do not know for certain where it was, except that it was to the north of the Jabbok. It is very remarkable indeed that neither in the story of Jacob's journey to Padan-Aram and back, nor anywhere else in the ()d Testament, do we lind any mention of the larmak. Now it is clear that no point in the range of cilead could determine the boundiary between the kingdom of Damascus and the kingdom of somaria. Bashan lay to the east of Gilead, and upon the whole was more clesirable ; and Israel certainly for a long time enjoyed it. If the theory that the place where Laban and Jacob parted as friends, was the boundary between Israel and Aram, had grown up in the course of the Syrian war, the legend could easily have provided another fixed point, by making lacob return so many days' jouncy, with his father-in-law, to such and such a place, which woukl mark

\footnotetext{
*. If Meyer, " linstehung des Jukenthums, "he right in thinking boh kebum and Simshaits letter and Artaxerxes reply strictly athentic, we should certainty be warranted in believing that the royal archives of Jerusalem which passed, with mome valuable booty, into the hands of Nebuchatnezsar, and thence into the archive of l'er-ia, really bore out the statements of our Fint look of Kings ; amb, in fact, it would be very stanere that the promise to Ahraham and his seed of such a wise fominion, shoukt have been recorded and transmitted and repeated hy propthet in the lixile, and it may he ly scribes afterwards, if it had never been lultilled.
}
the eastern extremity of the line whose western limit was marked by Mispah, Gilead, or Jegar Sahadutha. On the other hand, hefore the wars of Saul and David a cairn and a menhir anywhere on the ridge of Gilead, would be a sufficient boundary between Israel and the little kingdoms of Geshur and Maacah, very possibly the only part of Aram with which Israel was in familiar contact; for Tob, where we find Syrians in force in the time of David, appears as a sort of no man's land in the time of Jephthah, and the episode of Cushan Rishathaim, whatever we think of it, certainly did not last long, or leave many traces.

\title{
CONTRIBUTIONS AU DICTIONNAIRE HIÉROGLYPHIQUE.
}

Par Karl Piehl.
Deuxieme article.
§ 7. Longue série de mots relevés dans les textes des pyramides, pour lesquels l'explication proposée par l'éditeur de ces textes doit être écartée ou modifiée; SS. Vocables empruntés au Papyrus Ebers, et que Brugsch a mal rendus dans son grand Dictionnaire Hiéroglyphique.
§ 7. 1)ans les dermiers temps, j'ai, plusieurs fois,", eu l'occasion de relever-en partie et surtout à propos de l'Index \(\dagger\) que M. Schack a commencé à dresser des vocables contenus dans les textes des pyramides-la nécessité qu'il y aurait à faire une revision des traductions et explications proposées par l'éditeur de ces textes pour une masse de mots ancien-égyptiens. A cet égard, j’ai toujours avancé-et je maintiens constamment cette affirmation-que, la plupart du temps, il faut accepter les vues énoncées par Brugsch dans son Dictionnaire Hiéroglyphique, ouvrage qui, à mon sens, donne la clef de l'explication-à peu d'exceptions près-de tous les vocables non-mythologiques que renferment les inscriptions des pyramides de Saqqârah.

A présent, je compte reprendre le fil de mes allégations quant à cette matière, dans l'espoir de pouvoir amener l'auteur de l'Index an den Pyramidentexten à modifier, dans la suite de son ouvrage, sa manière de traduire différents vocables hiéroglyphiques.

A la série des modifications déjà introduites je joins la liste suivante, embrassant des vocables mal expliqués ou détournés de leur sens véritable par l'éditeur des textes des pyramides:

\footnotetext{
* Proccotings, XV, page 36 et pages 249-256. Sphinx, I, pages 65-67 et II, 1ages 137-140. Procectings, XVII, pages 254-263.
1. Sphinx: 1I, pages 225-230.
}
a. \(\{\) So (Pepi II, ligne 97r) a été rendu" le dieu Outou hotepir qui commande l'offrande." * Des textes d'époque plus récente montrent que nous avons à faire icià un dieu Hetrou hotep, qui, avec la déesse Tait (Pepi II, l. 326), préside à la fabrication des bandelettes sacrées. Effaçons donc le prétendu dieu Outou hotepit. \(\dagger\)
b. I Re voit, Pepi II, ligne 969, dans l'expression MAR ciel a flambé pour toi, la terre a eu peur de toi." \(\ddagger\) Je pense que la description qui se fait dans ce passage est purement physique. C'est pourquoi "avoir peur" est à remplacer par "trembler, se secouer." La même signification est à introduire pour set de Pepi II, ligne 320, où il y a ceci: \(1 \underset{\sim}{9} \longrightarrow\) se traduire selon l'éditeur: "je te lève l'œıl d'Hor en bonne santé vers ta face," \(\$\) mais où il aurait fallu plutôt rendre: " Pour toi l'ceil d'Hor sain oscille vers ta face."
c. Le vocabulaire hiéroglyphique connait deux groupes qui présentent une certaine ressemblance entre eux, à savoir
 et L'éditeur des textes des pyramides confond perpétuellement ces deux groupes, dont le premier, déterminé par un chevalet ou étai (originairement servant de support au fléau de la balance), signifie "soulever, lever, hausser," etc., tandis que le second se traduit plutôt "mettre, arranger, serrer," etc. Cfr. à ce sujet la locution \(\simeq \infty\) 思

｜｜Recueil，V，page i83：＂ \(\mathrm{Sib}_{\mathrm{ib}}\) prince des dieux，Osikis qui est PARMI les puissances，Hor maître des hommes et des dieux．＂Le parallélisme des membres montre l＇inexactitude de cette explication．
}
des dieux, Osiris qui est le chef des puissances, Horus qui est le maître des hommes et des dieux." Le dit nom d'agent se rencontre également dans la qualification (d'Osiris et d'Anubis) Cof en qui (Recueil, III, page ass) a été rendue "dans l'Amenti," mais qui se traduit plutôt "le chef de l'Anenti." Un troisième exemple du même nom d'agent, cette fois reproduit dans la forme pleine, c'est celui-ci flh (Pepi I, ligne 200) ce qui ne signifie pas "qui est au pays du Midi,' mais plutôt "celui qui domine le pays du Midi." Encore une preuve de ce mot se voit Pepi \(I\), ligne ro6, où ily a
 "'ru existes selon tes façons d'être, tu paries à tes suivants,"* mais plutôt "Tu es le chef de tes dezinciers, tu donnes des ordres à tes suivants."
I) u substantif fitho simple dérive régulierement la préposition Who "i la tête de, dans le front de," quelquefois (par ellipse) écrit tTho. J'avoue d'ailleurs ne pas avoir noté de cas oìr, dans les textes des pyramides, la traduction "parmi, dans" soit exigée pour cette particule, quoique ce sens soit logiquement admissible.
f. \({ }_{0}^{-\infty}\) "Yerser un pain long et un vase de liqueur." (Recueil, XII, page 90). En 1889 [Obseriations sur plusieurs signes et groupes hiérogolyhiques, si, dans les Actes du Congrès de Stockholm], j'ai, à propos des textes d'Ountas, combattu l'explication "Jeter un gâteau et une mesure de boisson," et mes arguments d'alors suffisent à écarter la traduction donnée pour le passage cité de Pepi \(I I\). Le groupe en (fuestion est donc un mot entier qui se lit __ \(\int\) dib et se traduit " offrande."
\(\therefore 8\) \& a été expliqué "barbe" par l'éditeur des textes des pyramides, bien que brugrels, il y a longtemps, ait définitivement prouvé le sens

\footnotetext{
* Recuil, V, page \(17 \%\).
}
"lockiges Haar."* Cfr. Lefébure dans la Zeitschrift, 1893, page 114 .
h. Les deux verbes \(\theta \cap \dagger_{\text {为 }}^{0}\) ar se traduisent communément, le premier "remonter" [litt. "aller contre"] le Nil, le second "descendre" le Nil. Le traducteur des inscriptions des pyramides soutient l'avis opposé, de sorte qu’il a rendu Teta,
 manière: "Toi .... tu es descendu vers Pou, tu as remonté vers Nefhen," traduction qui tient parfaitement compte de la position géographique des deux villes en question. Toutefois, le lexique prouve qu'il faut traduire ici: "Toi..... Pe remonte pour toi le fleuve, Nekhen descend pour toi le fleuve."
i. \& \(\bigcirc\) ?, mot fréquent, signifiant "couronne," a été coupé en deux "mettre couronne." Cfr. Pepi \(I\), ligne 426, où il y a
 ce qui a éte expliqué (Rcuceil, VII, page 165 ) de la sorte "mettent leur guirlandes sur leur tête, mettent leur guirlande sur leur cou.."

 de protection." Je préfêre traduire de la sorte: "il a mis sa tête sur son cou, et le cou d'Ounas est sur sa base." \(\dagger\)

Brugsch, qui (Wörterbuch, I, page 27ヶ) a expliqué \(3_{1}^{0}\) comme équivalent à "Halssäule, die Wirbelsäule am Halse, Hals," retracte plus tard (V, page \(3+1\) ) cette explication absolument incontestable. Le sens "cou" pour notre mot est d'ailleurs prouvé par Champollion,

* Voir Piehl, Petites Etudes Esyptologiques, page 14, note 20. La correction de Q en en ens inutile, les textes des pyramides nous ayant fourni un verle \(\chi^{e} m a \overline{\text {, }}\), saisir, empoigner." Voir la suite de ce mémoire.
+ Pour le sens du groupe \(\overbrace{0}^{\infty}\), voir Sphinx, II, pages 49, 50 .
1. \(4 \triangleq\) (Pepi Ir, ligne 398, dans la phrase \(4 \infty\)
 mot un question étant une forme du frequent \(\Longleftrightarrow\) écarter." le susdit passage, au lieu de devoir se traduire (Recueil, XII, page \(8_{5}\) ) "il (l'œil d'Horus) te donne tes humeurs,"* signifie simplement "il chasse tes humeurs." Cfr. Teta, ligne \(60: 4 \infty\)
 du ventre de Teta."
\(m\). If 1 a été expliqué, au point de rue étymologique, \(\uparrow\) en ces termes-ci: "Le mot If a pour premier déterminatif O, un petit rond, qui plus tard s'est confondu avec le soleil. C'est une forme en ir prothétique de la racine \(\AA\) o, "rond, boule, comme verbe rouler, se mettre en boule, marcher en rond." Cette explication de l'étymologie de uben est absolument inadmissible, et manque d'ailleurs tout-à-fait d'assiette de méthode. Pour trouver l'étymologie d'un mot égyptien, il ne suffit pas d'en prendre le déterminatif pour conseil. Il faut avant tout jeter un coup d'œil sur l'ensemble des parents du mot en question. En suivant ce procédé, recommandé par les maitres de la linguistique comparée, il est facile de donner une explication exacte du sens de If \(O\), explication qui évidemment sera différente de celle de M. Maspero. Les dérivés les plus fréquents de la racine uben sont, en dehors de
 En admettant comme origine de tous ces groupes une racine ayant le sens de "poindre, courir, couler," on a sans doute la clef de l'énigme. En voici des preuves:-
 lui apporte un faisceau lors de la manifestation (quand point la lumïre .') de la lumière zodiacale, schaque matin."

\footnotetext{
* Ce passare a été traduit par deux fois de la même manière. Voir encore R'mucil, NII, page 87 . Vecueil, XII, page 153, note 1 .
* Pienti, dans le Recucil, IV, pages 121, 122.

}
 sont les matières blanches et magnifiques que je jette sur le feu qui point de son autel."

débordent, de l'orge brille (point!) sur les murailles." \(\ddagger\)
 vant toi," et tu leur lances des plaies. \(\$\)

Pour tous ces exemples le sens "poindre," admis par nous comme l'originaire de la racine uben, fournit une explication plausible-la plaie est p. ex. une chose qui point, qui coule-mais je ne sais nullement comment arriver à un résultat satisfaisant, en admettant comme point de départ des étymologies le sens, prétendu originaire, de "rouler." Il est bien à craindre que, une fois admis, ce sens ne risque de vous roulor.

D'après ces remarques, le soleil appelé fo \(]\) mm est censé poindre, surgir. En effet, le verbe of \(]]^{m m}\) est employé, dans les textes, pour désigner ce que fait le soleil "chaque matin."
\(n . \infty\) le groupe, dont le sens "enlever" d'accord avec Brugsch, a été établi par nous\| ì l'encontre de l'explication "gonfler, enfler" de M. Loret, a été traduit par l'éditeur des textes des pyramides "élever," la plupart du temps, p. ex. dans
 \((\square 44)<\square \square\) [Pepi II, ligne 958]"ils élèvent Pepi au ciel;"
* De Rochemonteix, Edfou, page ii4.
+ Piehl, dans le Recucil, I, page 199. Cet article, écrit en 1879, contient la réfutation de la lecture proposée par M. Maspero [Zitschrift, 1879, page 58 ] pour le groupe \(\xlongequal{\sim}\), dont l'existence a été prouvé par nous. Brugscir (Wörterbath, VI, page 646-648) en IS8ว, a emprunté tous mes exemples en faveur de la lecture nemesmes. Une coüncidence bizarre c'est que, de même que j'ai (l.l.) spécialement examiné le préformatif mmm à propos du mot nemesmes, Brugsch l'a fait aussi sous le méme vocable du Supplément de son Dictionnaire.
\(\ddagger\) C’est là ma traduction de 1 S 79 .
§ Brugsch, Wörterbuch, V, page 309: "Du schleuderst ihnen das Erlorchen (!) entgegen."
|| Proccedings XII, pp. 374-379 et 433-437.
ce qui, en admettant l'exactitude de la traduction "élever" pour
 (Unas 493) de la sorte "ils l'élèvent à Tat," ce qui est logiquement impossible, la localité Tart étant souterrane, et par conséquent uniquement accessible ì celui qui descend. Dernièrement [Recueil, XIV, page 132] le sens " pratiquer" a été admis pour Pepi \(I I\), ligne ir 45 ,
 son emmaillottement" l.l.). Mais cette phrase signifie simplement: "On lui a enlevé son enveloppe."
o. In o "ureus," mot jusqu'ici absolument inconnu, a été découvert par l'éditeur des textes des pyramides pour les passages Pepi II, ligne 97 I [Recueil, NII, page i 87 ] et Pepi II, ligne 35 [Recucil, NII, page 58, note 3]. Comme exemple, citons ce
 \(8 \cap J_{0}^{\infty}\) "Tes deux narines sont charmées de parfunts, les ureus de tes deux jambes (!) frappent (la terre "pour marcher "), tu es en fête par tes dents, et tes doigts (litt. "tes ongles") supputent," etc. Pour ma part, je préfère traduire cette phrase égyptienne ainsi: "Ton nez est charmé des odeurs des produits de l'uræus, etc. Le man de \(\underset{\longrightarrow}{\longrightarrow} \longrightarrow\) est suspect. En tout cas, on ne peut parler "des urrus des deux jambes," car l'ureus n'a rien de commun avec les jambes, selon les textes. Mon explication adoptée, l'expression citée devient intelligible. On comprend que les " dents sont en fête" et "les doigts (litt. " les griffes"!) font des calcules" à cause des biens \(\binom{0}{0}\) de l'uraus, mais on ne comprendrait pas la même satisfaction à propos des "parfums" qui ne se mansent pus. Il faut donc effacer 0 Q

 vers I'eph," oil "urens" correspond visiblement a
\[
\begin{aligned}
& \text { ono } \\
& \text { cir }
\end{aligned}
\]
et le remplacer par "o © "uræus,' mot connu de longue date.

力. " " se battre," traduction qui a été employée [Recueil, XI, page 29] pour rendre l'expression
 97979779717779799 (Merenra, ligne 780 ) "il se bat comme Horus, muni du double cycle des dieux " selon l'éditeur. Mais il faut plutôt traduire: "hubbillé comme Horus, enteloppé comme le double cycle des dieux." Pour cette dernière explication consultez [Pepi I, ligne 256]: \(\square \times(\) 吕 49\()\) ) \(\because \times \times\), où l'éditeur-visiblement inspiré par les bons conseils du Dictionnaire de Brugsch - a fort bien traduit: "Pepi est enveloppé de l'enveloppe de Hor." Eliminons donc le groupe impossible \(\underset{x}{\leftrightharpoons}\) "se battre," qui ne s'est trouvé nulle part ailleurs.
q. ธa Af, verbe fréquent, synonyme de Ens \(^{3} \triangle\), se traduit en général" entrer, descendre" par tout le monde. Construit arec la préposition hai désigne le but auquel on est arrivé en

[Mcrenror, 450], "Tu descends en cette barque de Ra où les dieux
 \# "Ils descend dans la nuit," * etc.
 [Pepi II, ligne 857], ne peut nullement signifier, comme le veut M. Maspero," \(\dagger\) "Pepi destend de son siège," mais uniquement le contraire de cette explication : "Pepi s'installe sur sa chaise." \(\ddagger\)
* De Rochemontern, Edfou, p. 35 .
† Recuit, NII, page 170 .
\(\ddagger\) Quiconque réfléchit que la traduction des textes des pyramides a déjà formé et formera la base d'un système de mythologie, nous accordera sans doute qu'il n'est pas indifférent à la vérité de ce système si les mots à traduire sont rendus exactement ou d'une maniere purement fantaisiste. Tres souvent cette derniere manière de traduire est celle de l'éditeur de ces textes, ce dont nous avons fourni des preutes irréfutables dans les Procedings [XVII, page 262-263]. P'eut-on aller plus loin dans ce sens qu'en avançant le contraire de ce contiennent les texteso

Notons donc comme inexacte la locution 1 ? 44 "descendre de."
\(r .4 \iint\) in "les rives" [Pepi \(I I\), ligne 1152 dans rexpression \(4 \overrightarrow{j R D O D}\) "les rives du ciel"]. Brugsch nous a habitué à vorr dans ce groupe une désignation de "Land, Landgebiet," l'expression \& étant rendue par lui "die beiden Länder" (Ober-und Unter-Aegypten). Le français "parage, contrée, pays," est peut-être le meilleur équivalent du groupe en question. Nême, l'existence du terme \(4 \Longleftrightarrow]\) is 0 ne peut nullement modifier notre acception. Le titre fréquent du dieu Schou 400* ne signifie certainement pas "celui qui est sur la rive," mais " celui qui est sur (ou: cu-dessus de) la terre."
s. \(\square \underset{\square}{\square}\). Ce mot, excessivement fréquent aux textes des pyramides, a été rendu par l'éditeur de cenx-là " charme, livre," justement comme si le déterminatif qui l'accompagne représentait le rouleau du papyrus. Mais ce dernier s'écrit d'une toute autre manière dans ces textes. A mon sens, le déterminatif en question est la forme archaique de 気受 de textes plus récents. Le groupe cité est donc, à mon avis, une variante de W'örterbuch, VII, page 1169] "Schnitt, Messer." C'est ainsi que

 " qu'il soit enchanté contre les deux yeux de tous les Lumineux qui le voient," \(\dagger\) se retrouve dans une inscription des basses époques
 ce qui signifie: "Elle accorde que ton tranchant soit dans les deux yeus des lumineux qui te voient." Eliminons donc le vocable inexact \(\square\) riante de mom

\footnotetext{
* Marmette, Dínderah, II, \(59 . \quad\) t Recucil, Xill, page 86.

}
t. Les textes des pyramides semblent renfermer sous la forme \(4 \ldots-\quad\), deux mots distincts. L'un équivaut au mot
de textes plus récents, l'autre est sans doute une faute pour \(A\) Ce dernier \(-4 \ldots\), var. 4 \(\quad\) _--a été le plus souvent rendu " donner," " tendre," même " montrcr," par l'éditeur de ces textes, tandis qu'il represente sans doute la forme archaique du signe \(i \bar{i} \bar{l}\) de textes plus récents. Des expressions, comme celle-ci [Pepi \(I I\),
 "Soptit lui a tendu la main ;" \(\dagger\) ou comme celle-ci 4 man [Pepi II, ligne I 3if \(^{6}\) ] traduite [Recucil, NIV, page 146] " T"a domé ton bras " \(\ddagger\)-se rapprochent fort bien du passage suivant emprunté
 lave les mains et nettoie les doigts."

Toujours est-il quil faut abandonner pour \(4 \leftrightharpoons\) les sens " donner, tendre, montrer," etc.
u. \(\{u t\) ", se voit très souvent dans la locution \(\{\Delta \omega\) "émettre des paroles," "décréter," comme tout le monde est d’accord pour la rendre. Cela étant, il est inadmissible de traduire, comme cela a été fait bien des fois [p. ex. Recucil, V, p. 41, Recueil, XII, pages r61, 170], \(\{u t\), seul "ordonner." Exemples: Pepi II, ligne 1856, il est dit: "Pepi vit de ce dont vit Hor et
 qu'émet Hor" [non pas: "de ce qu'ordonne Hor," comme l'éditeur a traduit]. Au point de vue mythologique, les écouldements d'Hor et les ordonnances d'Hor sont évidemment deux choses bien distinctes.
 ne peut donc signifier "selon l'ordre que t'a fait ton père Seb," mais uniquement"-("les froments ". . . et "les orges ". . . .) de la création

\section*{1}

\section*{* Pour cette forme, voir Proceedings, XVII, page 26ı.}
† Nous préférons traduire: "Sothis iui a lavé la main," ce qui est parallèle la phrase qui suit, "l'étoile du matin a fait la toilette à Pepi."
\(\ddagger\) Je traduit ici: "T’a lavé ton bras."
§ Bénédite, Le Temple de Philia, page 109.
(litt. l'émission) qu'a faite pour toi ton pére Seb." Ce sens est fort à propos, Seb, le dieu-terre, produisant les blés.

2e. \(\int \operatorname{mim}_{0}-\). Ce groupe, pui se voit Teta, ligne 26 , a été rendu "gorge" par l'éditeur. Cette explication diffère de celle de Brugsch, qui [ Hörterbuch, II, page 380] a conféré le sens de "mamelon" au dit mot égyptien. Selon mon expérience, il faut le traduire la partie extérieure de la poitrine, tout au-dessous de la sorse. Ce sens résulte avec évidence de nombre de passages de textes d'époque très récente, où certain collier est dit être mis \(\leftrightarrow \infty<\infty] \frac{\square}{\pi<}\) "pour parer la poitrine" d’une personne.*

Cela étant, il est impossible d'admettre pour la phrase [l.l.] \(4<\int_{\operatorname{man}}^{\infty} \circ \overbrace{\odot}^{\infty}\) le sens, (déesse) " qui est dans la gorge de Ka," qu'a recommandé l'éditeur du texte en question. Cela équivaudrait presque à dire que Ra serait en train d'avaler la dite déesse, tandis que le vrai sens du passage ("qui est SUR la poitrine de Ra," Pıehl) fait de la déesse un ornement extérieur du cou du dieu solaire. Sous ce rapport, àrt bānt est à considérer comme un pendant de \(4 \infty\) "bracelet," groupe fréquent sur des coffres funéraires datant du Moyen Empire.

Cet exemple, comme on voit, est en outre très instructif pour les conclusions absurdes auxquelles, sur le domaine de la mythologie, on peut arriver par une explication inexacte de l'original égyptien.
\(x . \ldots \sum_{\ldots}\) [Teta, ligne 175] a été rendu [Recueil, V, page 20] "Terre ordonnateur de la terre" dans une phrase à allitération jouant sur les mots \(\underset{L}{\square}\) et \(\ldots\). Mais il faut traduire simplement "la terre sainte" et considérer le signe \(\ldots\) qui termine le groupe, comme déterminatif. En effet, l'Ancien Empire compte \(\ldots\) parmi

\(y\). Tho
\[
\text { * Rochmonimex, Edfou, page } 134 \text {. }
\]
si c'était une soudure de deux mots différents, scm " guide" et ut (?) "les deux uræus,"* bien qu'il ne représente en réalité qu’un seul groupe semutá, "les deux uræus," connu depuis longtemps, grâce à Brugsch [ Wörterbuch, VII, page 1057.) Cfr. Piehl, Second Série, Planche IIT, ligne 5: foo ใn.
\(z\). dans deux expressions presque identiques, qui cependant ont été rendues de manières différentes par l'éditeur. \(\uparrow\) En voici un spécimen:

 car Pepi s'assied à ton épaule, et que Pepi oint ta chevelure, Osiris, il ne met pas sa souffrance, Pepi ne met pas sa tresse de barbe à la bouche de Pepi, chaque jour." Mon interprétation de ce passage est celle-ci : "O Osiris, quand Pepi est assis à ton épaule et que Pepi crache \(\ddagger\) sur ta chevelure, il ne permet pas qu'il soit souffrant, \(\S\) il ne permet pas qu'il soit atteint (?) de la bouche de Pepi, jamais." \(\|\) En comparant entre elles les deux traductions, on trouve de suite que la notre est la plus vraisemblable. Selon celle-ci la salive qu'a crachée le défunt est un préservatif contre souffrance et maladie. Le parallélisme des membres montre que \(\Delta\) est synonyme de \(\bar{Y}\). Il ne peut donc pas signifier "tresse de barbe," mais se traduit plutôt "être atteint de souffrance, de maladie" ou quelque chose de pareil.
a. Le groupe i \(\dagger\) mmm \(t a-u r\) a été rendu "libation" [Recuteil, NII, page íf 8 et passim]. Mais c'est là une expression composée
* Recueil, NII, page 1 S \(_{3}\).
\(\dagger\) Recucil, NII, page 185 .
\(\pm\) Prociedings, XV, page 250, 251 .
S Ou peut-être "qu'elle soit souffrante," c"est-à-dire la chezelure.
if Ceci est un des passages oì l'éditeur a appliqué le procédé mathématique d'une façon très malheureuse, dans sa traduction, car \(\quad \Omega\). . . . ne peut jamais se rendre "ne pas" . . . . . . chaque jour," mais doit absolument se traduire "ne jamais."
de I "gros pain" et de mam "de l'eau." Pour ce prerrier groupe, consulter p. ex. Mariette, Dendérah, II, I3 \(^{\circ} \Longrightarrow\)
 Eliminons donc le groupe \(\frac{\square}{\square} \mathrm{mm}\) libation."

 sous cette liqueur fortifiante du Qobifou [réservoir d'eau fraîche] de Ra qui purifie la terre du midi devant Ra" [Recueil, VII, page 160]. Je préfère traduire ici: "Il porte cette urne du Kebhu de Ra, qui purifie," etc., senbet signifiant toujours une espèce de vase, jamais une liqueur quelconque, autant que je sache. Cfr. p. ex. Zeitschrift,
 rafraíchis à l'aide de tes cruches." Dans un autre endroit [Pepi \(I\), ligne 351], P'éditeur des textes des pyramides a rendu senbet "forteresse," sens également impossible. C'est dans l'expression
 \({ }^{157]}\) "les pavillons des forteresses," mais qui signifie plutôt "le dépôt des cruches."
\(\%\) Les deux prépositions \({ }_{\infty}^{\infty}\) et \(\underset{\square}{\square}\) qui sont bien distinctes, quant à leur emploi, pour d’autres époques, se reconnaissent de la même façon dans les pyramides. Une phrase comme celle-ci
 Ra" [Recueil, XII, page 143], mais uniquement: "dites auprès de (i.?) Ra." De même, \(\Rightarrow\) ill \(\Delta\) aucunement "il se met žers ta fille ainée," mais se rend uniquement: "il se place sous ta fille ainée." \(\underset{\infty}{O}=\) "chez, auprès de," \(\Delta=\) "sous," c'est là une règle connue de longue date qu'ignore visiblement l'editeur des textes des pyramides.
\(\therefore \underset{\mathbb{R}}{2} 04\) dicu qui [Recueil, NII, page 189] a été lu Rimerouti, avec la traduction "le porticr" entre parenthèses.

L'éditeur l'a donc rapproché du mot \(\bigcirc \bigcirc \square\). Mais ce rapprochement est impossible, attendu qu'il y a, pour le mot, [Teta, ligne 322] une variante \(\frac{\text { and }}{\text { and }}\); celui-ci a été rendu "les deux lions" [Recueil, v, page 37]. Ni l'une ni l'autre des explications fournies à ce sujet n'est exacte. Il faut lire Ruti et traduire "celui qui a la tête de deux lions." [Cfr. Le Page Renouf dans les Proceedings, XIV, page 27I.] Ce sont probablement des mots de cette espèce qui ont provoqué la formation adjective en -ti* qui originairement est due à un duel mal expliqué et compris.

є. \(\frac{\square}{5}\) et varr., groupe qui été traduit "rassembler," "s'humilier" (!), une fois même "saisir" [Recueil, V, page 9] par l'éditeur de ces textes. C'est le sens " saisir, empoigner" qu'il faut introduire partout, comme dans \(Q\) man 4 N \(\stackrel{\sim}{\infty} 77\) [Pepi II, ligne 39 et ligne 234] ce qui a été traduit une fois "Hor a donné que tu humiliusses les dieux" [Recucil, XII, page 59, note 2], une autre fois "Horus t'a donné que les dieux se rassemblent pour toi ( \(\dagger\) )," c'est-ì-dire de la manière la plus arbitraire, tandis qu'il aurait fallu le rendre tout simplement "Horus a donné que tu saisisses les dieux." [Cfr. de Rougé, Inscriptions Hiéroglyphiques, XXIX, ligne 4.]
 pour [Pepi II, ligne 400]:
 tu as frappé l'玉il D'Hor, il est sain sous toi" [Recueil, XII, page 85], passage qui plus tard [Recueil, XII, page 87] a été rendu "quand tu as grandi, l'exl d'Hor est sain sous toi." Les nombreux cas que nous connaissons pour \(\oslash \bigcirc\) dans le sens de "croitre, pousser" rendent cette dernière signification indispensable dans le présent cas,

\footnotetext{
* Piehl, Petites Etudes Ésyptologiques, pages 40-42.
\(\dagger\) Recueil, XII, page So.
\(\ddagger\) M. Maspero, semblant embrasser la théorie que lépoque de lorigine de la mythologie égyptienne a été un bellutm omnium inter omnes, " frapper" devient pour lui une signification indispensable dans bien des cas où le texte ne contient rien de semblable. Cfr. p. ex. ci-dessus \(\stackrel{\text { "se battre." }}{\square}\)
}
 les mamelles pendantes" [Recueil, V', page 56], oì je préfère traduire la fin de la sorte: "celle qui a le sein rebondi." Effaçons toujours \(\mathbb{Q}^{2}\) " "frapper."*
\%. A propos du passage de Teta [ligne 359] tout-à-l'heure cité, on peut noter Pepi \(I\), ligne 602 :
 щ où l'éditeur a traduit ainsi: à la large hanche, aux … \(\square \square\) mamelles ballantes." J'ignore d'où M. Maspero a eu le sens "hanche" pour le groupe i qui correspond à \(\mathbb{H} \mathbb{S}\) de Teta. l'eut-être ces deux groupes sont-ils simplement des formes d'un méme mot-celui donné par Brugsch [TÖrterbuch, VI, page 537] sous la physionomie que roici \(\stackrel{\text { g }}{\sim}\) (tempe?). Cfr. la version donnée, pour notre expression, par le sarcophage de Panehemisis de Viennet: 万of Evitons toujours le mot jusqu'ici inconnu "hanche."
o. "Le serpent Hipiou" est dit [Recueil, V, page 42] être mentionné dans le passage de Teta [ligne 293] que voici:
 qui a été traduit [\%. .] de la sorte: "Car c'est toi le serpent Hipiou [rampeur] sur son ventre, qui se nourrit des cceurs des dieux." Brugsch nous enseignant [Wörterluch, VI, page 834] que \(\rightleftharpoons \square^{\prime} \mathbb{O R S}^{-}\)- plutôt que serpent-signifie ver, "Wurm, (iewürm," il faut employer ce sens pour le passage cité, acception qui convient mieux au contexte, la thèse que les cours des dieux sont mangés par des vers, et non pas par des serpents, paraissant conforme à la médecine égyptienne. [Cfr. d’ailleurs, Piehl, Seconde

* Lépi II, ligne 70S: \(\operatorname{man}_{Q} \cap \cap \longrightarrow\) "ton destin s'afaiblit" \([\) Recucul, NiI, page [54] mérite aussi d'étre signalé, à ce propos. Je préfére traduire ici: "ton destin (?) prospère," c'est-ì-dire exactement le contraire de la traduction Maspero.
+ Von bergmann, Der Sarkophag des Panehemisis I, page 9.

111 mm ，d＇oin il résulte que les her－xet－sen mangeaient les bande－ lettes des morts］．Traduisons donc dorénavant \(\square\) if \(2 \Omega \Omega\)＂le zer Hipou．＂
\(\cdot\). N～～＂a été traduit＂tour à tour＂pour le passage suivant
 ［Pepi II，ligne 64］qui se voit rendu［Recueil，XII，page 60］de cette manière：＂Il t＇a amené tous les dieux tour à tour，dont la substance n＇est pas avec lui＂；mais que je préfere rendre ainsi： ＂Il t＇a amené tous les dieux en ine fois，sans qu＇ils s＇éloignent de lui＂ en m＇appuyant en partie sur cette expression－ci： 4 Q
 les dieux sans qu＇ils t＇abandonnent＂［litt．：＂montent au－dessus de toi＂］．

к．Maintenant，nous venons de parler d＇un mot qui joue un rôle marquant dans les textes des pyramides．J＇entends le mot \(\int_{0}^{\nabla}\) ， auquel l＇éditeur quelquefois a donné une nuance de sens par trop
 \(4 \infty[P e p i\) II，ligne 85］a été rendu＂tu as étendu le mur de tes bras derrière lui，dont la substance n＇est pas pour toi＂［Recueil，V， page 38］．La clause finale de cette expression me semble plutôt signifier：＂il ne s＇écarte pas de toi．＂Le sens du verbe \(\int_{0}^{\nabla}\) parait être＂monter，se lever，＂＊etc．Ainsi，Pepi II，
 ［Recueil，XII，page 169］a été rendu＂Ton［corps de］fer au ciel sur ton siège de fer，＂signifie，selon nous，plutôt：＂Tu montes au
＊En d’autres termes，je vois cn \(\int_{0}^{\sigma}\) un vocable apparenté à 衣高， ce dernier ne signifiant pas，comme le veut M．Maspero，＂avoir une âme，＂nais simplement＂monter＂［Sphinx，I，page 227］．Le mot＂âme＂花 dérive régulièrement du verbe \({ }^{7}\) ，et signifie littéralement＂celui qui se lève．＂Pour cette explication，je renvoie à la scène sif fréquents où l＇on voit l＇âme，sous forme d＇oiseau，quitter le iit funébre où repose la momie du défunt．Pour les ḍ̛yptiens Pâme citait rélleement un oisenu．
ciel sur ton siège de fer．＂La suite du passage cité étant celle－ci ：
 mpprocher le tout de l＇extrait suivant \(\forall \diamond f \emptyset\)［Pepi 1 ，ligne 305］，de laquelle comparaison il résulte que bir，de même que \(\leftrightarrows\) ，est un verbe désignant du mouvement．

 derrière M．，Solkit sur ses deux mains＂［Recucil，XI，page 29］，mais plutôt，＂Neit est derrière M．，Serket est en avant de lui．＂A ce sujet，il faut corriger un grand nombre de passages où 凩 11 a été traduit incorrectement＂sur les deux mains，＂mais où le sens est plutôt＂devant，en avant de．＂Pepi \(I\) ，ligne 5 ：
 sont sur tes mains＂［Recueil，page a 60 ］，mais uniquement：＂Tes adorateurs sont devant toi．＂De même，Recueil，XII，page 62： ＂qui sont sur les mains de l＇Etoile du Matin，＂Recueil，XII， page 137：＂il est le suivant de Ra，qui est sur les deux mains de l＇Etoile du Matin，＂etc．，sont à rectifier．Du dit il résulte que会 11 ＂devant，en avant de＂est l＇antithèse de 回 ＂derrière．＂

4．Le groupe of \(\bigcirc \frac{1}{2}\) a a été rendu＂＂lancer＂dans le passage que voici：\(\underset{\sim}{\infty}\)
 dans les textes du tombeau de Chāemhăt＊sous la forme suivante：

 tu as chassé les nuages，tu as percé le mauvais temps．＂［Maspero， Recueil，IV，page 75：＂tu a souffé l＇orage，tu as lancé la tempête， tu a projeté la grèle＂］．Comme on voit，le groupe étudié est une

\footnotetext{
＊Loret，dans les Mémorres de la mission du Caire，I，page 127.
}
 Brugsch a expliqué il y a 30 ans.*
 [Recueil, VII, page 157 ] "il a lancé l'ouragan," bien qu'il eût fallu plutôt le traduire "il a chassé ( = écarté) l'ouragan "-c'est-à-dire le contraire de l'acception Maspero.
\(\because\) Le mot \(\stackrel{\sim}{x}\), que nous venons de citer dans l'exemple, emprunté à Ounas, ligne 609, et que l'éditeur en a traduit "souffler" (visiblement parce qu'il croit à une apparenté entre ce groupe et
 d'après le passage en question. \(\dagger\) (ioodwin nous a dailleurs fait connaître le dit groupe, qu'il a releré dans le papyrus No. I de Berlin. La traduction "stagger" proŋosé pour cet endroit par le grand savant anglais nous semble devoir s'abandonner en faveur de celle de "s'éloigner, courir," ou quelque chose de pareil.

 [Recucil, V, page 7: "C'est Teti, le courant qui sort de l'urne."] Comme j'ai montré ailleurs, \(\ddagger \square\) est à regarder comme un aerbum substatizum, composé des deux membres, a fo, et उ dont chacun en état indépendant signifie "être."
o. D DA B mot connu de longue date, se traduit communément "rugir, rugissement." M. Maspero préfère le traduire "provisions." Cette traduction, il l'a proposée d'abord à propos de son explication de la stèle \(C 3\) du Louvre, \|l et après il l'a aussi introduite dans ses traductions des textes des pyramides [p. ex. pour Ounas, ligne 235].
* Brugsch, Wörterbuch, III, page ir 3 I.
\(\dagger\) Zeitschrift, 1872, page 33.
\(\ddagger\) Plehl, dans Sphinx, II, fasc. 4, page 197 et suiv.
§ Le passage cité signifie donc, selon moi, "C'est Teta qui sort de l'urne."
|| Études Egyptiennes, I, page 123. Dans mes Inscraptions Híroslyphiques, Prem. Série, II, pages 3-5, j'ai montré la nullité de l’explication fournie par Mr. Maspero de la stile C 3 du Louture.
- \(P^{\prime} \not f_{i} I, 304\), le groupe en question a été rendu "défiler" ; jignore pourquoi.

Personne n'admettant du reste le sens "provisions" pour IL \(L\)
\(\bar{\longrightarrow}\), verbe connu de longue date, a été traduit " \(s\) e tenir
 ["le taureau du ciel, qui se tient à l'écart,"* Recueil, IV, page 59]. Mais cette traduction dit le contraire de ce qu'elle devait dire. "Le taureau du ciel qui écarte par son courage " c'est l'explication que je soutiens pour le passage cité. En faveur de mon acception, j'allègue le passage suivant \(7=111\) victoricus, taureau qui écarte les taureaux." 'Traduire ici, "roi victorieux, taurean qui se tient ì l'court des taureaux," serait admettre que le roi aurait voulu se couvrir de ridicule.
\(p\). Le verbe of for aux textes des pyramides, signifie "lever, soulever." L'éditeur a sans doute en partie reconnu ce fait, ce qui pourtant ne l'empêche nullement de traduire Pepi II, ligne 7 I:
 zon [Recueil, XII, page 62]. Néanmoins, "adorer" se dit à cette époque कि

Les deux autres cas où, pour ces textes, j’ai noté le mot en question, sont les suivants: Teta, ligne \(36 \mathrm{I}:\) of \(\longrightarrow\) 管 de son épaule,"] et Tetu, ligne 365 : o 3\(\}\) \(\bigcirc\) [l. \(\bigcirc\)., page 56: "Ra se leve sur toi dans l'horizon"].

Ces deux derniers exemples sont plutôt à rendre l'un: "Ra soulève ta face sur son épaule," et l'autre: "Ra soulève ta face dans l'horizon." Lee rapprochement de ces denx expressions nous fournit une équation très intéressante au point de vue mythologique, et 'fui jusqu"ici était restée inaperçue, j'entends celle de l'horizon avec l'épaule de Ra.
* Cette traduction de \(\triangle \square\) pour le passage cité e voit reproduite Masnern,

Eilutes de myth. et d'arch. és., I, parge 157.
r Stide de l'unchi, ligne 72.

Voilà donc une longue série de vocables pour lesquels, selon moi, il faut modifier ou corriger l'acception soutenue par l'éditeur des textes des pyramides.
§8. Le supplément du Dictionnaire Hiéroglyphique de Brugsch a inexactement reproduit une petite série de vocables rencontrés au Papyrus Ebers. Les voici :-
a. ir \(\square]^{x}[V\), page 324], plutôt ì lire \(\stackrel{\square}{\square}] \int^{x}\) [ibid., VII, page 1327.\(]\)

c. \(\left.\circ \int\right]^{\min }\) [VII, page 1317], plutôt à lire e \(\left.]\right]_{1}^{\operatorname{mmm}}\).
d. \(\Delta \iint_{\infty}^{m m}\) [VI, page 1317], plutôt à lire e \(] \infty\).
e. \(\int_{1} \longleftarrow \square\) [VII, page 1269], "der Umkreis" einer Stadt," plutôt à lire for in laboratoire."
Je n'ai guère besoin d'expliquer les raisons de ces corrections, l'homme du métier sachant les trouver de lui-même.

The Amniversary Meeting of the Society will be held at 37, Great Russell Street, Bloomsbury, W.C., on Tuesday, oth January, i 899 , at 8 p.m., when the usual business will be transacted.

Note by the President, on a new Babylonian Chronological Tablet.

\section*{SOCLETY OF BIBLICAL ARCHAOLOGY PUBLICATIONS.}

In 8 Parts. Price 5s. each. The Fourth Part having been issued, the Price is now Raised to \(£ 5\) for the 8 Parts. Parts cannot be sold separately.

\section*{The Egyptian Book of the Dead.}

Complete Translation, Commentary, and Notes.
By the late SIR P. LE PAGE RENOUF, Knt. (President);

CONTAINING ALSO

\section*{The Bronze Ornaments of the Palace Gates from Balawat.}
[Shalmaneser II, b.c. 859-825]
To be completed in Five Parts.
Parts I, II, III, and IV have now been issued to Subscribers.
In accordance with the terms of the original prospectus the price for each part is now raised to \(£ \mathrm{I}\) ros. ; to Members of the Society (the original price) \(£_{1}\) is.

Price 7s. 6d. Only a Limited Number of Copies have been Printed.

\section*{THE PALESTINIAN SYRIAC VERSION OF THE HOLY sCRIPTURES.}

Four Recently Discovered Portions (together with verses from the Psalms and the Gospel of St. Luke). Edited, in Photograpinic Facsimnle, from a Unique MS. in the British Museum, with a Transcription, Translation, Introduction, Vocabulary, and Notes, by

REV. G. MARGOLIOUTH, M.A.,
Assistant in the Defartment of Oriental Frinted Books and MSS. in the British Museum; formerly Ty, riohitt Hebrew Scholar.

Subscribers' names to be Addressed to the Secretary,

[^29]:    * It seems here to reprenent a proper name, if we compare it with the inscription on a seal-cylinder belonging to Mr. Insinger of Luxor (No. 5), on which what is evidently a proper name is flanked on either side hy $\cap$. Similarly on a scal-cylinder bedonging to Mr. D. C. Robertson and bonght at Luxor (No. 6), " the Usiris Shedus (?)" is flanked ly the same sign.

[^30]:    * The form of the sign for Min makes it clear that the lower sign on the pictures of chapels or stelæ found at Abydos, and given under the numbers 793, 794 and 795 in M. de Morgan's book, must be intended for Min. Compare also No. 551 (? Hâ-ka-Min). $^{\text {( }}$

[^31]:    * This terminus ante quem appears to me to be until now the only possible chronological order for this civilisation (if. Wiedemann in the Umschaze, I, nr. 32 and 33). Dr. Sethe (Aeg. Zeitschr., XXXV, p. 6) has lately tried to modify it and to place the discoveries of Amélineau, Petrie and de Morgan, earlier than the IIIrd dynasty, this being called by Manetho Memphitic and making accordingly its burials near Memphis. But, the names of the dynasties of Manetho have nothing to do with the burial places of their kings, as is shown for instance by the name of the 5th Elephantine and the 12th Diospolitic. And even, if it could be proved, that all kings of the IIIrd dynasty were buried near Memphis-till now only hints, which could prove it for one king, are at band-this could be used for the dating of the Nagadah civilisation only, if the objects found in these tombs of the IIIrd dynasty showed another type than the findings at Nagadah-Abydos, a premiss for which till now no support has been brought forward.

[^32]:    * Book of the Dead, SS, 1. 2. The fivhes, who play a part in the myth of the dismemberment of Ilorus (book of the Deat, II ; ; f. Kenouf, Proc. Soc. Bibl. Arch., XVII, P. II) will belong to this order of ideas.
    + The animal appears, book of the Dead, 36 and 16a (if. Renouf, Tions. Soc. Bibl. Ach., VIII, 1. 214) as an enemy of the sun-god. A demon with tortoise head is found, Champ. Not. Mantrscr., I, p. 418; a wooden statue with such a head is at London (publ. Lanzone, Diz. di mit., p. 124). Book of the Deat, 83 (ff. the Thelean texts), the dead person wishes to have some relation with the tortoise.

[^33]:    * For instance, Mariette, Mast., p. 74.
    + It is noteworthy that this writing is found even on the scarabs of Mykerinos, made in the XVIIIth dynasty (Petrie, Scarabs, pl. 3r), apparently in imitation of old originals, the writing of Ka being in this period regularly the simple form L."

[^34]:    * A similar idea has been expressed by Lefébure in the Mitusine, VIII, p. 231 .
    + See above and Acg. Zeitschr., XXX, p. 62, sqq.

[^35]:    * Vase with the Ka name of Chenps, Leps., Dinkin., II, 2 d. (for the reading of the name see Aeg. Zeitschr., NXX, p. 52, sqq.)
    $\dagger$ Kia name Neter-cha (Bénédite, Rec. de traz̃., etc., XVI, p. 104).
    $\ddagger$ Aeg. Zeitschr., XXXV, p. 7, sqq.
    § Champ., Mon., IV, pl. 443, nr. I ; cf. Wiedemann, Acs. Zeitschr., 1878, p. 5 .

    II A series of examples, Aeg. Zeitschr., NXX, p. 53.
    G. Gethe, Aeg. Zeitschr., XXXV, p. 3, sq. The signs which follow the Ka name in the inscription pullished by Sethe, p. 5, and which he prestumes to contain the real hing name, have, as an analogous text discovered by Amélineau shows, nothing to do with it, but give a name or title connected to a building, whose name is enclosed in $\Pi_{0}$. It will be, therefore, advisable to renounce for the moment to the old king Chent, whose name the Egyptians of the new empire misread Kebḥu, notwithstanding its being rightly written, etc., as Sethe exposes. The existence of the king-name Chent, given by Lepsius, Koenigsbuch, nr. 917, as doubtful, after a notice by Brugsch, appears to me the more uncertain, as Brugsch himself, so far as I know, never again took notice of this personality.

[^36]:    * It has often leen repeated, that the use of the litle sa-ria begins only with the Vth dynasty (Wielemam in the Ahusion, XIII, p. 372), and in fact it is gencrally not found in the few historical notes we prossess of the IVth dynasty. Nevertheless it occurs, for instance, on the second statue of ling Chephren at Gizeh, and, if even this statue were of later origin, as we are told, I cannot imagine, that the artist, who made this work, was so excestingly foolish, or careless, as to give to the king, whose portrait he had made, a title that king never bore.
    + Aeg. Zeitschr., XXXV, p. $\mathbf{I I}$.
    "Sethe, Aes. Ziitschr., XXXV, p. 4. In reference to the "restoration" of the door in the step pyramid of Saqqarah I would like to say that the idea of its late origin, expressed first by Stern and myself on account of the material used in it, appears to me, in view of a series of newly found antiquities, much less certain. It is rery doutful if ever in later time a ling's name was intentionally written without the cartu uche, except in the cases, where it appears as the name of a god. On the monument pul, lished ly Frman, Acg. Zitschr., NXX, p. 40, the cartoucheles. Menna he took for King Menes can very well be a private person, as the text on Stela 7295 at Berlin (publ. Wiedemam in the Mitanges de Marlez, p. 376 shows, which quotes an Amon-Rä of Surcreï as well as here appears a l'tah of Menna.
    § Morgan, Rècherches, II, p. 167; f. Jéquier, l.c., p. 259.
